* 11 cents of last week are included in this.

Note.—Rice (husked)—Oryza Sativa.
Ragi—Eleusine Corocana.
Kulthi—(Horse gram) Dolichos Biflorus.
Cholum—Sorghum Vulgare.
Kadale—(Bengal gram) Ciser Arietinum.

DISTRICT REPORTS.

8. Markets how supplied.

9. Progress of agricultural operations, state of standing crops, prospects and probable outturn of harvests, serious damage done to crops by insects or other natural calamities.

10. Prospects of season, tracts in which the rainfall has been insufficient, areas affected by scarcity, number of people under relief, and state of food stocks.

11. Public health.

12. Remarks as to the condition of agricultural stock, failure of pasturage of fodder, etc.

BANGALORE CIVIL AND MILITARY STATION.

	Average for the past five years of the corresponding week.	*Current.*	
Prices of food grains—Rice ...	7½	5¾ to 6	seers per rupee.
Ragi ...	20	12 to 13	

Agricultural operations.—Sowing of ragi and cholum. Cattle are in good condition. Water sufficient. Fodder is growing very dear.

BANGALORE CITY AND TALUKS.

8. Market well supplied.

9. *Standing crops, viz.,* gingelly, cotton, sugar-cane and mulberry, are reported to be in good condition.

Crops sown.—Ragi and ballar are being sown in all the taluks. Paddy is being sown under the large tanks in the Channapatna Taluk.

10. Stock of food grains sufficient. But their prices are reported to be as high as before.

11. Public health generally good.

12. Cattle are reported to be affected with "Dod Roga" in parts of the Dodballapur and Devanhalli Taluks. It is gradually abating in the Magadi and Kankanhalli Taluks. Drinking water and fodder are available in sufficient quantities.

KOLAR.

8. Market well supplied.

9. *Standing crops* are reported to be generally in fair condition.

Crops sown.—Ragi and avare in Sidlaghatta and Gudibanda; ragi in Chikballapur, Bagepalli and Goribidnur; sajje and gingelly in Bagepalli; and samè and togari in Gudibanda.

Crops harvested.—Nil.

10. Prospects of the season generally good. But rain is needed throughout the district. Food stuffs available.

11. Except for a few cases of cholera in the Srinivaspur Taluk, an imported case of plague in Kolar town and fever and small-pox in parts of Gudibanda, public health generally good.

12. Cattle generally healthy, but "Rinderpest" is reported to prevail in Bowringpet, Chintamani, Mulbagal, Sidlaghatta, Goribidnur and Gudibanda. Water and fodder available.

TUMKUR.

8. Market well supplied.

9. *Standing crops* are reported to be in moderately good condition. Dry crops are withering for want of rain in Chiknayakanhalli, Tiptur and Turuvekere.

Crops sown.—Ragi, avare, togari in Maddagiri, Sira, Gubbi, Kunigal, Koratagere and Turuvekere; paddy in Tumkur, Maddagiri and Gubbi; ragi in Tumkur; castor in Maddagiri and Sira; ragi, avare and cholum in Tiptur; and savé and navane in Pavagada.

Crops harvested.—Sugar-cane in Tumkur, Koratagere and Turuvekere; paddy in Gubbi, Kunigal, Koratagere and Turuvekere; and cholum in Sira.

10. Prospects of the season fairly good. Rainfall is insufficient in Chiknayakanhalli Tiptur and Turuvekere. Food stuffs available.

11. Public health generally good.

12. "Dod Roga" is prevailing among cattle in parts of the Tumkur, Chiknayakanhalli, Gubbi, Pavagada and Kunigal Taluks. Water and fodder are available for the present. Date leaves are also being used as fodder in parts of the Sira Taluk.

MYSORE.

8. Market well supplied.

9. *Agricultural operations.*—Lands in parts of the Seringapatam and Yedatore Taluks are being ploughed.

Standing crops are reported to be in moderately good condition in all the taluks, except in parts of the Chamrajnagar Taluk and in the villages of Padavalamarahalli, Vasanur, Dodda Homma, Chikka Homma and Toravalli in the Nanjangud Taluk, where they are reported to be withering for want of rain. Cholum in parts of the Nagamangala Taluk and both cholum and til in parts of the Gundlupet Taluk are also reported to be withering for want of rain. Cholum in some of the villages of the Santemarahalli hobli in the Chamrajnagar Taluk is reported to have been infested with insects.

Crops sown.—Ragi in parts of the Malvalli and T.-Narsipur Taluks and paddy in parts of the Malvalli Taluk.

Crop harvested.—Cholum in parts of the Chamrajnagar Taluk.

10. Prospects of the season generally good. But standing crops in parts of the Heggaddevankote, Gundlupet, Malvalli and Nagamangala Taluks are reported to be in need of rain. Raiyats and merchants have sufficient stock of food grains.

11. Except for plague in parts of the Mysore, Heggaddevankote, Gundlupet, T.-Narsipur and Nagamangala Taluks, and both plague and cholera in parts of the Krishnarajpete Taluk, public health generally good.

12. Cattle generally healthy. But "Dod Roga" prevails in two villages of the Kasaba hobli and four villages of the Varuna hobli, Mysore Taluk, in Chamrajnagar town and in some villages of the same taluk, and in the village of Mugur in the T.-Narsipur Taluk. It is abating in the Kukkuru village of the T.-Narsipur Taluk. Both "Sappe Roga" and "Dodda Roga" prevail in four villages of the Yelwal hobli, Mysore Taluk, and in some villages of the Krishnarajpete Taluk. Water and fodder available.

HASSAN.

8. Market well supplied.

9. *Agricultural operations.*—Harrowing and weeding are going on in the Hassan Taluk and paddy is being transplanted in the Manjarabad and Belur Taluks.

Standing crops—Ragi, paddy, sugar-cane, togari, castor, gingelly, etc., are generally in good condition. Dry crops are reported to be withering for want of rain in the Arsikere Taluk.

Crops harvested.—Sugar-cane and green gram are being harvested in the Channarayapatna Taluk.

10. Prospects of the season fair. More rain is required in the Arsikere Taluk. Food stuffs available.

11. Except for cholera and plague in one or two villages in the Hassan Taluk, public health generally good.

12. Cattle are generally in good condition. But "Dod Roga" exists in parts of the Hassan Taluk It has abated in the other taluks. During the week 163 head of cattle have been inoculated. Water and fodder available.

SHIMOGA.

8. Market well supplied.

9. *Agricultural operations.*—Paddy seedlings are being transplanted in the Nagar and Tirthahalli Taluks.

Standing crops, viz., paddy and sugar-cane are in good condition in all the taluks of the district. Arecanut crop is attacked with "Kole Roga" ("Rot") in the Nagar Taluk.

Crop sown.—Paddy in portions of the Shimoga and Channagiri Taluks; ragi in the Channagiri, Honnali and Sagar Taluks; and cholum in the Honnali Taluk; these are being sown.

10. Prospects of the season generally good. Food stuffs are available in sufficient quantities.

11. Public health generally good. Plague is abating in the Kumsi Sub-Taluk.

12. Cattle generally healthy. But murrain prevails among them in portions of the Channagiri and Tirthahalli Taluks. Water and fodder available.

1103

KADUR.

8. Market well supplied.

9. *Agricultural operations.*—Transplanting of paddy in Chikmagalur, Mudgere and Sringeri are going on.

Standing crops:—

In Chikmagalur—Paddy, sugar-cane, ragi, avaré, hutchellu, castor, coriander, gingelly, black gram, green gram, togari, onion and garlic.

In Kadur—Kar-paddy, sugar-cane, black gram, green gram, ragi, gingelly and cholum.

In Tarikere—Paddy, black gram, green gram, sugar-cane and gingelly.

In Mudgere—Paddy and ragi.

In Yedahalli—Paddy and sugar-cane.

In Sringeri.—Nil.

All the above are reported to be in fair condition. But rain is wanted in the maidan parts of the district.

Crops harvested and their yield:—

Kadur—Kar-paddy and sugar-cane, yield 8 annas.

10. Prospects of the season fair. Food stuffs sufficient.

11. Public health generally good.

12. Cattle generally healthy. But "Dod Roga" is still prevailing in parts of the district. Water and fodder available.

N.B.—Report from Koppa not received.

CHITALDRUG.

8. Market well supplied.

9. *Standing crops.*—Jola, castor, togari, black gram, sesamum and paddy are reported to be in good condition.

Crops sown.—Cholum and togari in the Chitaldrug, Holalkere and Jagalur Taluks; cholum in the Hiriyur and Molakalmuru Taluks; black gram in the Chitaldrug and Holalkere Taluks; green gram in the Chitaldrug and Jagalur Taluks; sesamum and castor in the Chitaldrug, Challakere, Molakalmuru, Hiriyur and Jagalur Taluks; paddy in the Holalkere and Chitaldrug Taluks; ragi in the Challakere, Holalkere, Jagalur and Hosdurga Taluks; avaré in the Holalkere Taluk; cotton in the Holalkere and Jagalur Taluks.

Crops harvested.—Nil.

10. Prospects of the season fair. But rain is urgently wanted all over the district. Food stuffs available.

11. Public health generally good.

12. Cattle healthy, except in parts of the Chitaldrug Taluk, where "Rinderpest" prevails. Water and fodder available.

N. VENKATESA IYENGAR, *Chief Observer in charge, Mysore Meteorological Dept.*

Bangalore Horticultural Show.

TO BE HELD AT THE LAL-BAGH, 6th AUGUST 1908, AT 4 P.M.

LIST OF PRIZES.

CLASS I.—FOLIAGE PLANTS.

Group.	Description.	Prize—I.	II.	III.
		Rs.	Rs.	Rs.
1.	Best Group of Foliage Plants set up for decorative effect ...	20	10	0
2.	Best Group of Rare Foliage Plants	20	10	0
3.	Best Group of Maiden Hair Ferns	10	5	0
4.	Best Decorative Group of Palms and Ferns	15	10	0
5.	Best Collection of Dracænas ...	10	5	0
6.	„ „ Caladiums ...	10	5	0
	Total ...	130		

NOTE.—*Groups* 1 *and* 4: decorative effect of the group is of first importance *Group.* 2: The plants must be well cultivated.

CLASS II.—PERENNIAL FLOWERS IN POTS.

		Rs.	Rs.	Rs.
1.	Best Standard Roses, in six varieties and six pots ...	8	5	0
2.	Best Dwarf Roses ...	6	4	0
3.	Best General Collection of Roses not including the above; not less than twelve pots and not exceeding twenty ...	15	10	5
4.	Best New Roses, exhibited for the first time	8	5	0
5.	Best New Geraniums, exhibited for the first time, one pot of each.	8	0	0
6.	Best Double Geraniums, in six or more varieties, not exceeding twenty-five pots	6	4	0
7.	Best Single Geraniums, in eight or more varieties, not exceeding twenty-five pots	6	4	0
8.	Best Ivy-leaved Geraniums, double or single, not exceeding twenty-five pots	5	0	0
9.	Best Fuchsias in four or more varieties	5	0	0
10.	Best Carnations, in three or more varieties	5	3	0
11.	Best Cannas, in twelve or more varieties	8	5	0
12.	Best Shrub Begonias, not less than eight kinds	8	0	0
13.	Best Tuberous-rooted Begonias ...	8	4	0
14.	Best Dahlias	8	5	0
15.	Best Collection of Gladioli, not less than six varieties ...	8	4	0
16.	Best Achimenes, not less than twelve varieties ...	6	4	0
17.	Best Perennial Phlox, in three or more varieties ...	5	3	0

CLASS II.—concld.

Group.	Description.	Prize—I.	II.	III.
		Rs.	Rs.	Rs.
18.	Best Chrysanthemums, in eight or more varieties, but not exceeding twenty-five pots ...	8	5	0
19.	Best Cyclamen ...	8	0	0
20.	Best Gloxinias	6	0	0
21.	Best Verbenas, in six or more varieties but not exceeding fifteen pots	5	3	0
22.	Best Pansies in six or more varieties but not exceeding fifteen pots	6	3	0
23.	Best Novelties in Perennials exhibited for the first time, one plant of each	6	0	0
24.	Best mixed Group of Perennial Flowers	10	6	0
	Total ...	254		

NOTE.—*Group* 24 should generally contain well cultivated plants of kinds not provided for in the above special groups.

For decorative effect in the general and special collection of blooms, ferns or other foliage plants may be introduced.

CLASS III.—ANNUAL FLOWERS IN POTS.

		Rs.	Rs.	Rs.
1.	Best General Collection of Annuals in Flower	8	5	0
2.	Best Double Sunflower ...	4	0	0
3.	Best Asters in six or more varieties	6	4	0
4.	Best Nasturtiums	4	0	0
5.	Best Balsams	4	2	0
6.	Best Phlox Drummondi in ten or more varieties limited to fifty pots	6	4	0
7.	Best Double Petunias, in six or more varieties	8	6	0
8.	Best Single Petunias, in six or more varieties	5	3	0
9.	Best Lobelia	4	0	0
10.	Best Pinks, in ten or more varieties limited to fifty pots ...	4	2	0
11.	Best Novelties in Annuals ...	5	0	0
	Total ...	84		

NOTE.—Plants grown in pots will be preferred to those lifted from the ground.

CLASS IV.—CUT FLOWERS.

Group.	Description.	Prize—I.	II.	III.
		Rs.	Rs.	Rs.
1.	Best Arrangement of Flowers, etc., in a vase	8—	6—	3
2.	Best Hand-Bouquet	6—	4—	0
3.	Best Collection of Cultivated Flowers, not less than twelve kinds	6—	3—	0
4.	Best Collection and Arrangement of Wild Flowers and Grasses	5—	0—	0
5.	Best Table decoration arranged by a lady	10—	5	0
5a.	Best Table decoration arranged by a butler	8—	4—	0
6.	Best Cut Roses not less than twelve varieties to be exhibited singly on Exhibition desks	8—	4—	0
7.	Best Dahlias not less than twelve varieties to be exhibited singly on Exhibition desks	5—	3—	0
8.	Best Chrysanthemums not less than twelve varieties to be exhibited singly on Exhibition desks	5—	3—	0
	Total		96	

CLASS V.—FRUITS.

		Rs.	Rs.	Rs.
1.	Best Collection of Fruits of all kinds	10—	8—	6
2.	Best Apples, in six or more varieties	10—	6—	0
3.	Best Peaches, in two or more varieties	8—	0—	0
4.	Best Figs, in two or more varieties	6—	4—	0
5.	Best Bananas (only of the finest varieties)	5—	3—	0
6.	Best Raspberries	3—	0—	0
7.	Best White Grapes in three or more varieties	8—	6—	0
8.	Best Blue Grapes in three or more varieties	8—	6—	0
9.	Best Guavas	4—	0—	0
10.	Best Papayas	6—	3—	0
11.	Best Pumeloes	6—	0	0
12.	Best Oranges	6—	0—	0
13.	Best Sweet Limes	4—	0—	0
14.	Best Sour Limes	4—	0—	0
	For bona-fide growers only.			
15.	Best Collection of Fruits of all kinds	15—	10	0
	Total		155	

NOTE.—In fruits generally quality and flavour are more important than size and colour. In group 15 the fruit must be certified to have been grown by the exhibitor himself.

CLASS VI.—VEGETABLES.

		Rs.	Rs.	Rs.
1.	Best Potatoes, in six or more varieties, half maund of each	10—	6—	4
2.	Best Cabbage, not less than three	6—	4—	0
3.	Best Brussels Sprouts	6—	0—	0
4.	Best English Carrots	6—	4—	0

CLASS VI.—concld.

Group.	Description.	Prize—I.	II.	III.
		Rs.	Rs.	Rs.
5.	Best Blanched Celery	6—	4—	0
6.	Best Cabbage Lettuce	5—	0—	0
7.	Best Cos Lettuce	5—	0—	0
8.	Best Endive	5—	0—	0
9.	Best Green Peas	6—	4—	0
10.	Best Parsnips	5—	0—	0
11.	Best Beetroot	5—	0—	0
12.	Best Onions	5—	0—	0
13.	Best Turnips	5—	0—	0
14.	Best Knol-khol	6—	0—	0
15.	Best Custard Marrow	6—	0—	0
16.	Best Asparagus	8—	0—	0
17.	Best Cauliflower, not less than three	8—	4—	0
18.	Best Tomato, not less than three varieties	6—	0—	0
19.	Best Hill Gooseberries	3—	0—	0
20.	Best Cho-cho	6—	0—	0
21.	Best Yams	8—	4—	0
22.	Best Brinjals	6—	0—	0
23.	Best Basket of English vegetables	15—	10—	6
24.	Best Collection of Sweet Herbs	6—	0—	0
25.	Best Bendekayi	4—	0—	0
26.	Best Hagalakayi	4—	0—	0
27.	Best Gorikayi	4—	0—	0
28.	Best Huralikayi	4—	0—	0
29.	Best Padavalakayi	4—	0—	0
30.	Best Budikumbalakayi	4—	0—	0
31.	Best Collection of Country vegetables in kinds other than those mentioned above	8—	0—	0
	For private gardens only.			
32.	Best Brussels Sprouts	6—	0—	0
33.	Best Celery	6—	0—	0
34.	Best Green Peas	6—	4—	0
35.	Best Asparagus	8—	0—	0
36.	Best Dessert Tomatoes	6—	0—	0
37.	Best General Collection of European vegetables	15—	10—	0
	Total		296	

NOTE.—In vegetables quality is of paramount importance, size often indicates coarseness. *Groups* 32—37: In these groups inferior quality will disqualify an exhibit.

CLASS VII.—MISCELLANEOUS.

		Rs.	Rs.	Rs.
1.	Best Collection of Fruit trees grown in pots	15—	0—	0
2.	Garden Tools and Implements	8—	5—	0
3.	Garden Sundries as pots, manures, labels, etc.	10—	5—	0
4.	Garden Furniture	15—	0—	0
	Total		58	

NOTE.—*Group* 1. Trees ready for fruiting or in fruit are meant.

Group 4. Articles such as garden seats, tubs, garden tables, jardinieres, etc.

Grand Total ... Rs. 1,073

GENERAL CONDITIONS.

1. In view to arrangements being made for staging plants, it is requested that exhibitors will notify to the undersigned, at least four days prior to the Show, what number of pots they intend to enter and for what prize they intend to compete.

2. Plants intended for competition should be delivered in the Conservatory before 4 P.M., on the day previous to the Show.

3. Cut Flowers may be delivered up till 2 P.M., on the day of the Show, but not later if intended for competition.

4. No prize shall be awarded unless there are at least two competitors for it, except in cases of rare excellence, when the Judges will use their own discretion.

The number of exhibits in all classes and sections should exceed the number of prizes offered, otherwise the Judges will be authorised to reduce the full value of such prizes.

5. It shall also be competent for the Judges to reduce the amount of prizes if, in their opinion, the articles exhibited do not merit the full sums.

6. Obtrusive staging, overcrowding, packing to conceal blemishes, and artificial support to blooms, etc., will be judged as defects to an exhibit, preference being given to natural growth and artistic arrangement.

7. Where a number limit is laid down any exhibit exceeding that number shall be disqualified.

8. Where one plant of each kind or variety is specified as a condition, any exhibit containing duplicates shall be disqualified.

NOTE.—For the purpose of the exhibition the words kinds and varieties may be illustrated as under:—apples, oranges, figs, grapes, etc., are distinct *kinds* of fruits. Ribston Pippin, Blenheim Orange, Golden Reinette, etc., are distinct *varieties* of apples. Roses, Chrysanthemums, Dahlias, etc., are distinct kinds of flowers. Marechal Niel, Crimson Rambler, La France, etc., are distinct *varieties* of Roses. Cabbage, Beans, Beet, Carrot are distinct *kinds* of vegetables. Sugarloaf, Early Drumhead, Enfield market, etc., are distinct *varieties* of Cabbages.

8*a*. Two or more persons may not compete for prizes separately with plants, etc., from the same garden.

9. If funds are available, the Judges may award special extra prizes in cases of exceptional merit.

10. All exhibits sent for competition must be *bona-fide* the produce of, or have been raised by, the exhibitors; and unless otherwise specified, must have been grown in Bangalore.

The Judges may withhold any prize until proof of these conditions be produced. Contractors bringing up fruit and vegetables for competition in their own name can compete for prizes but not for medals.

11. Exhibitors will not be permitted to remove their exhibits until the Show is closed, and gardeners and others found offering articles for sale before 6 P.M., on the day of the Show shall be summarily ejected.

12. The names of exhibitors can only be attached to exhibits when the judging has been completed. Plant labels will be supplied by the Show executive, subject to the approval of the same.

The following Rules for awarding medals at the Horticultural Shows are hereby notified to the public:—

The Government of His Highness the Maharaja have sanctioned the grant of medals in addition to the usual money prizes offered at the half-yearly Horticultural Shows, subject to the following conditions:—

(1) The medals will consist of, a gold medal for classes I, II and III, a silver medal for class V and a bronze medal for class VI.

(2) These medals will be awarded by the Judges, at their discretion, at the Summer Show held in July or August in each year.

(3) The following exhibitors will be qualified for the award of a medal:—

(*a*) The exhibitor of the best all-round exhibit in the appropriate class or classes, taking the two shows of the calendar year together.

(*b*) The exhibitor of an exhibit of more than ordinary excellence in any group.

(*c*) The exhibitor of any specially meritorious novelty.

(4) No exhibitor who has been awarded a medal in any class will be qualified to receive another medal in that class during the three calendar years succeeding that in which he has received the medal.

(5) No exhibitor will be qualified to receive a medal who is not the *bona-fide* cultivator of his exhibit or the actual occupant of the garden in which the exhibit was raised; *e.g.*, no contractor, who has merely purchased fruit or vegetables exhibited will be eligible.

(6) It will be open to the Judges to withhold any or all the medals in any year on the ground of deficiency of merit in the exhibits.

G. H. KRUMBIEGEL,
Supt., Govt. Gardens.

* Report not received.

Note.—Rice (husked)—Oryza Sativa.
Ragi—Eleusine Corocana.
Kulthi—(Horse gram) Dolichos Biflorus.
Cholum—Sorghum Vulgare.
Kadale—(Bengal gram) Ciser Arietinum.

DISTRICT REPORTS.

8. Markets how supplied.

9. Progress of agricultural operations, state of standing crops, prospects and probable outturn of harvests, serious damage done to crops by insects or other natural calamities.

10. Prospects of season, tracts in which the rainfall has been insufficient, areas affected by scarcity, number of people under relief, and state of food stocks.

11. Public health.

12. Remarks as to the condition of agricultural stock, failure of pasturage of fodder, etc.

BANGALORE CIVIL AND MILITARY STATION.

	Average for the past five years of the corresponding week.	*Current.*	
Prices of food grains—Rice ...	7½	5¾ to 6	seers per rupee.
Ragi ...	20	12 to 13	

Agricultural operations.—Sowing of ragi, avare and cholum. Cattle are in good condition. Water and fodder sufficient.

BANGALORE CITY AND TALUKS.

8. Market well supplied.

9. *Standing crops, viz.*, sugar-cane, mulberry, castor and haraka, are reported to be in good condition; but gingelly crop is said to be withering in the Kankanhalli Taluk for deficiency of rain.

Crops sown.—Ragi, avare and togari are being sown. Karthika paddy is also being sown under tanks in the Hoskote, Channapatna and Devanhalli Taluks.

10. Stock of food grains sufficient. But their prices are reported to be as high as before.

11. Public health generally good.

12. Cattle are reported to be still affected with "Dod Roga" in parts of the Dodballapur and Devanhalli Taluks. It is reported to be gradually going down in the Nelamangala and Kankanhalli Taluks. Water and fodder are reported to be available in sufficient quantities.

KOLAR.

8. Market well supplied.

9. *Standing crops* are reported to be generally in fair condition.

Crops sown.—Avare in Kolar, Bowringpet, Sidlaghatta, Chikballapur and Gudibanda; samé in Chintamani and Gudibanda; sajje and gingelly in Bagepalli; togari in Gudibanda; and ragi in all the taluks of the district except Mulbagal.

Crops harvested.—Nil.

10. Prospects of the season generally good. But rain is needed throughout the district. Food stuffs available.

11. Except for a case of cholera in Bayapalli village, Srinivaspur Taluk, a case of plague in Sugatur, Sidlaghatta Taluk, and fever and small-pox in parts of Gudibanda, public health generally good.

12. Cattle generally healthy, but "Rinderpest" is reported to prevail in some parts of Kolar, Bowringpet, Sidlaghatta, Bagepalli, Goribidnur and Gudibanda. "Chappe Jadya" also prevails in Gudibanda. Water and fodder available.

TUMKUR.

8. Market well supplied.

9. *Standing crops* are reported to be in moderately good condition. Dry crops in Maddagiri, Sira, Tiptur and Turuvekere are in need of more rain.

Crops sown.—Ragi, avare and togari in Maddagiri, Chiknayakanhalli, Sira, Gubbi, Tiptur, Pavagada, Kunigal and Turuvekere; paddy in Tumkur, Maddagiri, Gubbi and Turuvekere; castor in Tumkur, Maddagiri, Gubbi, Pavagada, Kunigal and Koratagere, horse-gram in Chiknayakanhalli and Koratagere; haraka in Chiknayakanhalli, Gubbi, Tiptur and Pavagada; and ragi in Tumkur.

Crops harvested.—Sugar-cane in Tumkur and Turuvekere; paddy in Gubbi, Kunigal, Koratagere and Turuvekere; and cholum in Gubbi.

10. Prospects of the season fairly good. But rainfall is insufficient in Maddagiri, Sira, Tiptur and Turuvekere. Food stuffs available.

11. Public health generally good.

12. "Dod Roga" is prevailing in parts of the Tumkur, Chiknayakanhalli, Pavagada and Kunigal Taluks. Water and fodder available for the present; but scarcity of water is being felt in Pavagada. Date leaves are also being used as fodder in parts of the Sira Taluk.

MYSORE.

8. Market well supplied.

9. *Agricultural operations.*—Dry and wet lands are being ploughed and made ready for sowing in parts of the Seringapatam, Malvalli, Mandya and Krishnarajpete Taluks. Transplanting of paddy has begun in parts of the Yedatore and T.-Narsipure Taluks.

Standing crops.—Ragi, cholum, togari, castor, avare, paddy, horse-gram, etc., are reported to be fair in parts of the Mysore, Chamrajnagar, Yedatore, Malvalli and Mandya Taluks, good in parts of the Seringapatam, Hunsur, Heggaddevankote, Nanjangud, T.-Narsipur and Krishnarajpete Taluks and withering for want of rain in parts of the Gundlupet, Nanjangud and Nagamangala Taluks.

Crops sown.—Ragi in parts of the T.-Narsipur, Malvalli and Krishnarajpete Taluks.

Crop harvested.—Cholum in parts of the Nanjangud and T.-Narsipur Taluks.

10. Prospects of the season good on the whole. Want of rain for the withering crops is felt all over the District. Raiyats and merchants have for the present sufficient stock of food stuffs.

11. Except for plague in a few places, public health generally good.

12. Cattle in parts of the Mysore, Chamrajnagar, Hunsur and T.-Narsipur Taluks are reported to be suffering from "Dod Roga." A few have died from it at Hunsur. They are reported to be healthy in other places. Water and fodder available throughout the district.

HASSAN

8. Market well supplied.

9. *Agricultural operations.*—Paddy in the Hassan and Belur Taluks and Dodda ragi and chillies in the Hole-Narsipur Taluk are being transplanted.

Standing crops—Sugar-cane, paddy, ragi, castor, togari and gingelly are in good condition in all the taluks of the district except Arsikere, where dry crops are reported to be withering for want of rain.

Crops sown.—Dodda ragi in the Channarayapatna and Hassan Taluks and avare in the Hassan Taluk are being sown.

Crops harvested.—Nil.

10. Prospects of the season good. Food stuffs available. More rain is required in the Channarayapatna and Arsikere Taluks.

11. Public health generally good. Plague is prevalent in one village in the Hassan Taluk and in two villages in the Belur Taluk.

12. Cattle are generally in good condition. "Dod Roga" is still prevalent in a mild form in parts of the Hassan, Manjarabad and Channarayapatna Taluks. Water and fodder are available. The latter is getting scarce in the Arsikere Taluk.

SHIMOGA.

8. Market well supplied.

9. *Agricultural operations.*—Paddy seedlings are being transplanted in the Tirthahalli Taluks.

Standing crops, viz., paddy, ragi and sugar-cane, are in good condition in all the taluks of the district. Arecanut is attacked with "Kole Roga" (Rot) in portions of the Sagar Taluk.

Crops sown.—Paddy in portions of the Shimoga Taluk; ragi in the Shimoga and Channagiri Taluks; and cholum in the Channagiri Taluk, are being sown.

10. Prospects of the season generally good. Food stuffs are available in sufficient quantities.

11. Public health generally good. Plague is subsiding in the Kumsi Sub-Taluk.

12. Cattle are generally healthy. But murrain prevails in a few villages of the Shikarpur Taluk. Water and fodder available.

KADUR.

8. Market well supplied.

9. *Agricultural operations.*—Dodda ragi, avare and togari in Chikmagalur; ragi and cholum in Kadur; and paddy, ragi and cholum in Tarikere, these are being sown.

Standing crops:—

In Chikmagalur—Paddy, sugar-cane, ragi, avaré, gingelly, castor, cholum, coriander, black gram, green gram, togari, onion and garlic

In Kadur—Ragi, cholum, gingelly, black gram and green gram.

In Tarikere—Paddy, ragi, cholum, black gram, green gram, sugar-cane and gingelly.

In Koppa—Paddy, sugar-cane, areca, cardamom, pepper and coffee.
In Mudgere—Paddy and ragi.
In Yedahalli—Paddy and sugar-cane.
In Sringeri.—Paddy and areca.

All the above are reported to be in good condition.

Crop harvested and its yield :—

Kadur—Sugar-cane, yield 8 annas.

10. Prospects of the season good. Food stuffs sufficient. More rain is needed in the maidan parts of the district.

11. Public health generally good.

12. Cattle generally healthy. But "Dod Roga" is still prevailing in parts of the district. Water and fodder available.

CHITALDRUG.

8. Market well supplied.

9. *Standing crops.*—Cholum, ragi, togari, castor, black gram, green gram, paddy, cotton and sesamum are reported to be in good condition. Rain is wanted throughout the district.

Crops sown.—Ragi in the Chitaldrug and Davangere Taluks. Sesamum and cholum in the taluks of Hiriyur and Molakalmuru and the Alur Sub-Taluk. Avare, horse-gram, chillies in the Chitaldrug Taluk. Black gram and green gram in the Davangere Taluk and the Harihar Sub-Taluk. Castor and cotton in the Molakalmuru and Jagalur Taluks. Paddy in the Davangere Taluk. Togari, navane and sajje in the Molakalmuru Taluk.

Crops harvested.—Nil.

10. Prospects of the season fair. Rain is wanted throughout the district. Food stuffs available.

11. Public health generally good.

12. Cattle healthy, except in parts of the Hiriyur Taluk, where "Rinderpest" prevails. Water and fodder available.

BANGALORE,
22*nd July* 1908.

A. RANGASWAMI IYENGAR,
Revenue Commissioner.

1141

Memo No. R. 424—Agri. 14-07-10, dated 20th July 1908.

The accompanying Report on "Cocoanut Palm disease in Travancore", by Dr. E. J. Butler, M.B., F.L.S., Imperial Mycologist, published by the Agricultural Research Institute, Pusa, is hereby republished for general information.

By Order,
K. S. CHANDRASEKHARA AIYAR,
Secy. to Govt., Gen. & Rev. Depts.

REPORT ON COCOANUT PALM DISEASE IN TRAVANCORE.

The southern half of the cocoanut forest of the Malabar coast lies in Travancore. Viewed from the see near Alleppey it forms a continuous belt in which the coast villages are entirely buried. The coast line here consists of a sandy beach, passing inland into a light soil with a large proportion of sand until the shore of the Vembanad lake, a large lagoon some forty miles long, opening to the sea at Cochin, is reached.

This lake forms part of the continuous system of navigable lagoons and channels, part natural part artificial, which extend parallel to the sea for a distance of over two hundred miles northwards from Trivandrum. These are for the most part narrow and tortuous but open out here and there into expances of shallow water, the whole forming an unrivalled chain of "backwater" communication through the heart of the cocoanut area.

Around the lagoons and backwaters the soil is stiffer than along the coast, largely formed of silt taken from the bed of the water channels and employed to build up small islands and banks, raised a foot or two above the water level, crowded with cocoanuts and densely populated. In parts of the east and south-east of the Vembanad lake low ridges of laterite are found. In this tract between the sea and the backwaters and around the latter, except on the laterite, the best cocoanut lands of North Travancore are found.

Practically only two types of cultivation are seen in this area. By far the larger portion consists of cocoanut gardens, with areca, jack, plantain and other garden produce as subsidiary crops. In the shallow stretches of water, broken by cocoanut topes, which border the lake and open out of the backwaters, a peculiar type of paddy cultivation is seen. These stretches are enclosed by mud and wattle bunds built from the bed of the lake to near the surface of the water in the monsoon, and the surplus water is pumped out by steam or hand power, until a crop of paddy can be put in. The pumping is done after the North-East Monsoon, the crop planted about December and harvested just before the inundation of the following South-West Monsoon.

Inland from the backwaters is a tract of country extending to the foot of the Cardamom hills, which form the western half of the State. This is broken by numerous rivers and streams descending from the hills to empty into the backwaters and ultimately the sea. It is not flat, like the coast belt, but diversified by low hills and ridges, particularly towards the higher range. Cocoanut cultivation follows the rivers and streams, the palms being found not only in the valleys but also on the hill sides.

It is possible, therefore, to distinguish three more or less distinct zones of cocoanut cultivation; the littoral with sandy soil not much raised above the water level and comprising the largest part of the area under cocoanuts: the part adjoining the backwaters, equally lowlying but with soil largely formed of silt: the sub-montane, extending inland to the foot of the hills, with a deep red or blackish alluvium along the valleys and a shallow, generally poor, laterite on the hills. The palm thrives best on the sand of the coast and the sandy loam around the backwaters within ten or fifteen miles of the sea. Towards the hills it is less productive; fine gardens occur in the valleys but those on the hill sides are poor.

The climate of Travancore is remarkably equable all the year round. The mean day temperature of the year is about 80° F., the mean maximum of the year abovt 87·5° F, and the mean minimum about 75° F. Higher readings than 90° are rare, and lower than 70° still rarer.

The rainfall shows two well-marked progressive increases from south to north and from the coast-line to the hills. Thus it increases from an annual average of 30 inches near Cape Comorin in the south to 114 inches at Alleppey and 117 at Parur in the north of the State, and again from 114 inches at Alleppey on the coast to 198 at Peermade in the hills. There is no long dry period, rain falling as a rule every month throughout the year, though December to March is comparatively dry. January is the driest month. Precipitation increases until the arrival of the South-West Monsoon. June is the month of maximum rainfall. Then there is a diminution again until October when, with the North-East Monsoon, a secondary maximum is reached.

As the cocoanut is said everywhere to require a warm and moist climate with an equable temperature it will be evident that Travancore fulfills its climatic requirements perfectly. It is

said also to flourish best sufficiently near the sea to allow of the sub-soil being infiltrated with sea water. Different analyses in India, Ceylon and the Philippine Islands seem to show that a heavy crop removes over a hundred pounds of potash salts and over sixty of sodium chloride (common salt) per acre per annum, and may explain this preference. Be that as it may a large proportion of the best Travancore cocoanuts are in soil which is infiltrated with salt or brackish water.

That this salt is a necessity to the tree is evidently believed in many cocoaunt growing countries where, as in Travancore, an application of salt to its roots is frequently made. Its requirements in potash and magnesium are probably supplied in part by infiltrated sea water in lowlying littoral or backwater soils. Elsewhere they are furnished by dressings of wood and leaf ashes (largely of the cocoanut itself) applied around the base of the tree. Beyond this a limited amount of manuring with cocoanut or other *poonac*, cattle manure, fish manure and, occasionally, bones is practised. The palm responds remarkably quickly to fertilizers and there is certainly much room for improvement in indigenous practices in this respect.

The prosperity of Travancore—admittedly great—depends primarily on its cocoanut industry. It is difficult to ascertain the exact area under the palm, combined as it is with every other sort of cultivation except in the dry area of the south, on paddy lands, and in the hills. One estimate gave about 250,000 acres under palms. The exports for 1903 were approximately a crore of rupees' worth of all kinds of cocoanut produce, oil, copra, coir, and nuts. The internal consumption is very great. Aprat from those actually engaged in palm cultivation, land-holders, tenants, labourers, etc., the coir industry alone supports 133,047 persons, according to the census of 1901. One of the densest populations in India (six of the Taluks have over 1,000 persons to the square mile and three over 1,300) is maintained primarily by this palm. It is natural that any diminution of yield due to disease should have forced itself on the notice not only of the cultivators but of the State authorities. Still it is an indication of the insidious nature of the attack of the disease here dealt with that, though Minachil has been affected for thirty or forty years, it does not appear to have been brought to the notice of Government until much later, in a memorial from the ryots of Kaviyur and Kalloopara, dated April 24th, 1897. Even yet the serious state of affairs is not realised in many localities where it is considered a passing affliction, though the experience of the older affected localities, such as Minachil, should serve as a warning.

The extent of the damage already caused by this disease may perhaps be gauged by the fact that, in spite of the rise in prices in recent years, the trade in cocoanut produce accounted only for 32 per cent of the entire State exports in 1905-06 against an average for decades past of nearly 50 per cent.

In the short time at my disposal I was unable to ascertain the exact limits of the area said to be affected by the disease. It is confined to North Travancore; from North to south it extends from Shertollay to probably near Quilon; inland it reaches the foot of the hills at Erattupetta. The total area affected is, however, unknown.

The earliest record of the outbreak that I could obtain was at Erattupetta in Minachil Taluk. Here it was variously stated to have commenced thirty to forty years ago. In so remote a period the cultivators' recollections are likely to be mere approximations; still it is certainly of more than thirty years' standing. From Erattupetta it spread slowly westwards to the adjoining villages, Minachil, Lalam and Pulliyanur. The latter is said to have first got the disease about twenty-five years ago. Further to the west it is still spreading slowly in a continuous line; a village about seven miles west of Pulliyanur was, I was told, reached only two years back At the same time outbreaks occurred in many other parts of North Travancore At Changanachery I was told it had been noticed about twenty years ago, but some gardens have been attacked within the last two years. At Alleppey, where it is confined to a small area, it was also first observed about twenty years ago. In each case after the first outbreak in one garden, neighbouring gardens have been successively attacked, and everywhere seen there were the same indications of gradual spread from one or a few original centres of infection.

Besides cocoanut several other species of palm are attacked. The areca palm is even more severely affected at Minachil, and opinions were unanimous there that this was the first variety to become diseased. The talipot (*Corypha umbraculifera*) is not nearly so common as these two, but several cases of disease in this palm were brought to my notice. Similarly the sago palm (*Caryota urens*) is sometimes affected. I heard of no case in palmyras. In the others the symptoms are alike, and there is no reason to doubt that all suffer from the same disease.

The symptoms are those of a slow and progressive deterioration of the palm, in sharp contrast to the rapidly fatal palm disease of the Godavari Delta on the east coast. They are not always developed in the same order and some, such as an exudation of gum from the trunk, are only occasionally found.

As a general rule the first indication that a cocoanut palm is attacked is the opening out of the outer leaves from the head. The leaf stalk becomes slightly flaccid and the weight of the leaf causes the whole to droop. Then the ends of the pinnae or leaflets at the extremity of the leaf become flaccid and hang down almost vertically. This is accompanied by a loss of colour; the drooping and discoloration of the leaflets then extend gradually backwards to the whole leaf. Later on the tips of the leaflets turn yellow and dry up, followed gradually by the entire

leaf, which eventually hangs down withered from the crown. The attachment of the leaf sheath to the tree is weakened so that the outer discoloured leaves can be easily torn of from the crown. One after another, or many together, all the leaves are similarly affected; intermediate conditions are common; young trees often have a large proportion of leaves healthy with only a few yellowed, others have all the leaves equally discoloured and drooping at the tips of the leaflets, before any dry up. Gradually, as the palm weakens new leaves that are put out are smaller than of old. This is apparent even before they unfold from the bud and results in the central or leading shoot, which is merely the unopened new leaf bud, becoming stunted and pallid. Later on it begins to wither and the upper free part turns brown. Eventually it may dry up altogether, but this may not occur for many years.

Even in the first year or two the nuts are affected. They are fewer and smaller than usual. On splitting the husk is found unaltered and usually the shell also. The white kernel is however, shrivelled and indurated and copra prepared from it is said to be deficient in oil. The fluid inside is reduced in quantity (or even, I was told, sometimes absent, though I did not see any such case) and is altered in quality, becoming unpalatable to drink. In later stages a large proportion of the nuts drop in an immature condition. In more severe cases the spathes are unable to burst out at all or, if they do, rot away early and the palm becomes barren.

In healthy palms a bunch of nuts is given about every two months. The best trees in the sub-montane districts yield about 60 to 80 nuts a year. Nearer the coast the yield may rise to 80 or 100, though the average is much lower. I was shown one fine palm that gave, up to a year or two ago, an average of twenty nuts per bunch; it is now diseased and gave this year only three or four.

The top of the stem and the white internal part of the crown (known as the "cabbage") are quite normal, except in old cases, just before death, when the latter rots. Even in severely affected palms no trace of the disease or of any unhealthy condition can be found in these parts. The rest of the stem is equally healthy in appearance; I was told that wood from diseased trees is weaker than that from healthy, and it is certainly more spongy in texture. In some cases cracking of the rind with exudation of gum occurs in the early stages; it is not a general symptom but only seen in a few cases. As in palms everywhere, discoloured patches on the rind are frequent, but they are mostly superficial and entirely unconnected with the disease. A brown discoloration frequently appears after cutting open the trunk. This is apparently more marked in diseased than in healthy trees. It is not visible when first cut, is quite unconnected with any parasite, and is probably due to an oxidation process.

The absence of any parasite in the stem is of interest. A cocoanut disease, similar in many respects to the Travancore disease, has recently engaged attention in Ceylon. It has been attributed by the Government Mycologist, Ceylon, to a fungus known as *Thielaviopsis ethaceticus*, well known as the cause of the "pine-apple disease" of sugarcane. A similar fungus occurred with such regularity on the cut stems of cocoanut palms wherever examined in Travancore, that the likelihood of its being the cause of the disease appeared considerable. Further investigation showed that this is not the case. The fungus, though allied to the cause of "pine-apple" disease, is a distinct species of *Thielaviopsis*. It occurs equally on healthy and diseased palms, and on all or most of the Indian species, being common on cocoanut, areca, palmyra and date. It is found on cut surfaces of roots, stem and crown and appears freely on split areca nuts that are perfectly healthy. Hence its spores must be very widely distributed on the surfaces of palms, and in the air in palm-growing tracts. As it lends itself eminently to rapid dissemination this fact alone would be enough to put it out of court as a cause of the disease, for the progress of the latter is extremely slow. Even more definite evidence is fortunately available. It occurs equally freely on palmyra and date palms at Pusa where no serious palm disease is known. It has also been encountered in Sylhet on areca palms, in the Godavari on palmyra and cocoanut, and on date palms from Sind. In none of these areas is there a similar disease to that in Travancore. Further, slabs of the stem of deceased cocoanut palms in Travancore were cut out with a red-hot knife under asceptic precautions, and incubated. These did not give rise to any fungus when kept from exposure to the air, though when uncovered they quickly showed a characteristic growth of *Thielaviopsis*. Hence, whatever be the cause of the Ceylon disease, the palm *Thielaviopsis* is a perfectly harmless fungus in India, so far as is at present known, and certainly has nothing whatever to do with the Travancore disease.

After the leaves, the most extensive alterations are found in the roots of the diseased palms. As the roots themselves show differences in the sandy soils of the littoral tract and the heavy alluvium of the inland valleys they will be separately described.

In the sandy soils of the coast and the light silts of the backwaters the main roots extend both downwards and laterally for great distances. For most of their course they are unbranched, finger-like structures, covered with a reddish bark, usually straight and gradually diminishing from three-quarters of an inch or more to half an inch or less in diameter. From their structure they must be considered to be primarily "fixing" roots, whose chief function is to fasten the tree into the soil. Water and food supplies taken in by the feeding roots must pass to the stem through them, but it is improbable that they themselves play any part in obtaining supplies. From these main roots the lateral roots are given off at intervals, and from the lateral roots finer rootlets arise. The roots of the second and third order are small, white,

softer and less brittle than the main roots and appear to extend only a short way from the parent root. Food and water are taken in by the finer rootlets, which thus have functions of the highest importance in the economy of the tree.

In the heavy alluvial soils of the sub-montane area the roots do not run to anything like the length of those in sandy soils. The main roots are smaller, much curved and twisted and frequently branched. The lateral feeding-roots are given off closer together and are better developed than in the other case.

In the sandy soils food supplies are scanty. As a result an effort is made by the tree to tap as large an area as possible. It can hardly be doubted that this is the explanation of the long exploring roots of palms in the littoral tract. The valley soils of the interior are, on the contrary, rich in organic matter washed down from the hills, and food is present in sufficient quantities near the base of the stem. Hence there is no need for the penetration of a considerable bulk of soil and the roots mass and ramify in a comparatively small space.

In consequence of the larger expanse of root an examination of the entire root system of any but seedling palms is practically impossible in the sandy area. The following account is, therefore, based chiefly on conditions observed at Pulliyanur in deep valley soils; such examination as was possible at Alleppey on the coast was only sufficient to show that the essential features are the same.

In seedling cocoanut palms the main roots arise densely crowded together from all parts of swollen base of the stem, and diverge in every direction. Each main root gives off numbers of white lateral roots, which again give off others of the third order. Except in advanced cases of disease, the main roots of a diseased tree will be found for the most part unaltered. A large proportion of the lateral roots are however rotted and, in some cases, this rot extends back into the main roots and even to the base of the stem. In some advanced cases of disease half of the main roots were found to be affected with this rot while the proportion of the smaller roots rotted was much higher. In milder cases only three or four main roots may be rotten while, even on the sound roots, perhaps fifty per cent of the rootlets will be dead.

The disease, therefore, manifests itself chiefly through alterations produced in the leaves and in the roots and it is necessary to ascertain in which of these parts it has its original seat.

In the leaves the wilting and discoloration of the leaflets are not induced by parasitic attack. The leaf tissue simply gets pale and flaccid. Even when this extends to the whole leaf there is still no indication of any local parasite at work. The condition is merely one of starvation and drought. When the leaf ends die, no doubt fungi appear, but fungi always fasten on any dead plant tissue and an examination of those found showed that they were common moulds and harmless species, feeding on the dead tissues.

The minute plants known as fungi are, as a whole divided into two classes according to their food requirements. The larger class, the *saprophytes*, live on dead organic matter, chiefly plant remains; they cannot get their food from living tissues such as growing plants. The smaller class, the *parasites*, are on the contrary able to attack and feed on living tissues, and are the cause of a vast number of diseases of plants.

On the leaves of diseased palms no parasite was commonly found, such as would be sufficient to account for their unhealthy condition. Were one present we would expect to find the first attack confined to one or several small areas, whereas in fact a large number of leaves may turn yellow and all their leaflets begin to droop simultaneously.

In the roots matters are different. The root itself consists of an outer layer of thick-walled cells which form a protective covering. Within this there is a zone of variable thickness, composed of cells with moderately thick walls which become larger, looser and have thinner walls as they are further from the surface. This is known as the *cortex*. Within the cortex, and forming the central tough strand of the root, is a body of mostly thick-walled cells, called the *central cylinder*. It is through the latter that the vessels run which convey water and food salts from the soil to the stem.

Lateral roots affected by the rot mentioned above are invaded by a parasitic fungus, which enters from the soil and develops the minute threads, of which its body is composed, in and between the cells of the cortex. When a root becomes invaded by this parasite the cortical cells are killed as soon as a thread of the fungus reaches them. They quickly turn brown and collapse. This is especially marked in the large thin-walled cells of the inner layers. At a later stage the whole root appears blackened and shrunken as a result of the death of a large number of its cells; it can evidently no longer perform its work of taking in food and decomposition rapidly sets in.

The threads of the parasite are of two kinds. The older ones are deep brown and comparatively large. From them arise finer colourless branches. All are divided into segments by transverse walls. In older stages masses of these brown threads become crowded together and divide frequently, so that a brown patch of fungus tissue is formed. In this, at a still later stage, spore-capsules are developed under the rind and these burst out to open on the surface of the root and discharge spores. The spores are rather large, egg-shaped bodies, colourless and single when young but divided into two cells and deep brown when older. It is a species of the genus *Botryodiplodia*, of which several parasitic members are known.

Quite recently Mr. F. A. Stockdale, Mycologist to the Imperial Department of Agriculture, West Indies, has described a similar and perhaps identical species as the cause of a serious cocoanut disease in Trinidad. The symptoms of this disease are on the whole similar to those described above and it appears to be possible that both are really the same.

There is no absolute proof that the *Botryodiplodia* is the cause of the disease, either in Travancore or in Trinidad. It is not even certain that the two are identical, as the scientific description of the latter has not been published. So far as can be gathered from Mr. Stockdale's report the spores of his fungus were not found actually on cocoanut roots, but only on the leaf petioles, though he attributes the death of the roots to a fungus found in them and apparently agreeing with that on the petioles. In Travancore the *Botryodiplodia* was only found on roots, but was obtained on deceased roots of areca as well as cocoanut palms. Spores were not found on roots actually in the soil, but developed on diseased roots after these had been dug up and kept for some time. Only the early stages of formation of the spore-capsules were found in freshly dug roots. The brown threads within the roots were found in these cases to communicate with the spore-capsules, both immature and ripe, and there is no doubt that the threads of diseased roots belong to the *Botryodiplodia*.

Scientific proof that this fungus is the cause of the disease can only be obtained by inoculating the roots of healthy palms with a culture of the fungus, and thereby producing the disease. This has not been possible in the time at my disposal, and would require facilities for isolating and growing the fungus which were not available in Travancore. All that can, therefore, be safely said is that the roots of diseased palms are rotted by the attacks of a parasitic fungus; that this fungus appears to be a *Botryodiplodia*; and that probably the root rot caused by it is sufficient to produce the disease at present ravaging the cocoanut gardens.

The effects of such a parasitic attack on the roots will be at once clear if we consider the work which healthy roots have to perform. For healthy growth a tree requires a supply of carbon dioxide and oxygen from the air, and water with dissolved salts from the soil. The latter are useless to the plant until they are carried up to the leaves, where they become transformed into food. For this purpose a steady flow of water, containing the salts in solution, must be maintained between the roots and the leaves. The surplus water at the top is got rid of by "transpiration" or evaporation into the air. Besides its use in carrying salts to the leaves, an abundant supply of water is required in every part of the plant body to keep the body cells in activity.

All the water required by a plant is taken in by its roots. The roots which do this work are for the most part not the main roots but the finer rootlets. As we have seen above a large proportion of these are found to have rotted in diseased trees, with the result that the water-supply is diminished. In a tree such as the cocoanut palm the effects of this would naturally not be evident in the stem, but would be visible first in the leaves. This accounts for the early symptoms of drooping of the leaflets and flaccidity of the leaf stalk so that it bends away from the crown. At the same time interference with the food supply causes the leaves to lose colour. The yellowing of the crown, which is most evident symptom of the disease, is thus due to the combined effects of drought and insufficient food. Hence, it is that though an appearance of recovery is said to be frequently visible after heavy rain, the effect, as it is only due to a temporary increase in available water, disappears as rapidly as it came.

The period of fruiting of any tree throws a heavy additional strain on its resources. This is chiefly in the matter of food supply. Hence, unless the feeding mechanism of the tree is in perfect order the fruit is not properly developed. For the first season or two of scarcity the reserve resources possessed by every tree may be sufficient to allow a fair proportion of fruit to ripen. This, however, is only done at the expense of the "capital" of the tree and in reality hastens its deterioration. Later on food becomes insufficient for any formation of fruit and the tree becomes barren. This is exactly what happens in cocoanut disease; it is made manifest first by a diminution in the number of nuts on each bunch, then by their dropping while immature and finally by their entire absence.

As a larger number of leaves become incapable of performing their proper work of manufacturing food the leading shoot becomes stunted. The still unexpanded leaves of the bud turn yellow and dry up at the extremities. This withering extends backwards until, in extreme cases, the bud itself withers, rotting sets in and the crown falls off. Such a termination may not be reached for years; localities such as Alleppey, where disease has existed for twenty years, have as yet had comparatively few deaths.

Palms of every age are attacked. In Minachil numbers of diseased seedlings, a year or two old, were found. Very old palms appear to escape longest, probably on account of their large root area. Still I saw a few trees, said to be about a hundred years old, which were undoubtedly diseased.

The intensity of the disease differs greatly in different localities. In the sub-montane area around Minachil death is a frequent termination. In Alleppey and Changanachery deaths are rare. In the former the attack first began in areca palms and subsequently extended to cocoanuts. It spread most rapidly and is still most severe in the lowlying, badly drained lands along the valley of the Minachil river. Gradually the hill side gardens were attacked, until at the present time scarcely a garden between Erattupetta and Pulliyanur is free from it. In

areca palms it runs its course more rapidly than in other species. This is probably due to a variety of causes. In the first place there is little or no attempt at cultivation in the areca gardens. The nuts are self-sown and come up densely through a heavy undergrowth of weeds. They appear to receive little attention at any period of their growth. The palms are very close together six or eight hundred to an acre. They are smaller and probably more delicate than the cocoanuts. All these circumstances favour the disease and it spreads rapidly once it gets a footing. In one garden visited, only thirty areca palms had survived out of six hundred. Death has been known to occur in three years from the first attack, but the usual period is five or six years.

In cocoanuts young palms may be killed in five years, but this is exceptional. Eight or ten years appears to be a more usual period, while in very many cases the disease progresses enough to cause barrenness, but fails to kill the tree outright. Thus, in one large garden only two hundred cocoanut palms were in bearing out of about two thousand, while the actual deaths were not numerous. Recovery in either areca or cocoanut palms, once they have taken the disease, is said to be unknown near Minachil.

Near the coast at Alleppey very few trees have been killed. The area affected here is an almost continuous block of about twenty-five acres in extent. In part of this some proprietors have seventy or eighty per cent of their palms diseased. Here cocoanuts were first attacked and areca palms, which are less grown, subsequently. I was shown several palms which have been diseased for more than ten years without succumbing. As regards recovery opinions were conflicting. In some cases a progressive recovery lasting for five or six years was said to have occurred. Others said that such recovery was temporary and that the palm never succeeded in entirely throwing off the infection. At Changanachery in the backwater tract the disease was similarly of a mild type as compared with Minachil but was widespread. Deaths were rare but the loss in yield in individual gardens was over fifty per cent. A temporary recovery had been obtained by one man, who applied lime to the roots; this only lasted for about two years and the yield again dropped. Here, as at Minachil, lowlying lands were most severely attacked, but gardens on higher lands were not immune. Where the soil is sandy the progress is slower than on laterite.

The above account shows that the disease is worst in the heavy alluvial valleys and poor laterite hill soils of the sub-montane tract. It is widely distributed but less severe in the neighbourhood of the backwaters, being apparently worst on poor laterite ridges and badly drained hollows. It is least severe on the sandy soil of the littoral.

Spread has probably occurred from one or a few centres which were early attacked. The evidence points to Minachil Taluk as the locality of its first appearance. The extension in this Taluk has been continuous from Erattupetta towards the west. At the same time other outbreaks occurred in isolated places, such as Alleppey. The question of the infectious nature of the disease is therefore of great importance since, if it has succeeded in crossing the Vembanad lake, there appears to be no reason why it should not eventually spread all along the Malabar coast.

The disease is undoubtedly infectious. All the evidence points that way. For instance the steady gradual extension from east to west in Minachil Taluk can have no connection with conditions of soil, climate or anything of that sort; it must imply the march of some infectious matter. Similarly the small deceased area at Alleppey is gradually extending but forms a solid block, while to the north, east and west there is none for miles. The best evidence, however, was got in a garden about half a mile south of the main area of decease at Alleppey. About ten years ago a palm was purchased from a garden in the latter area and transplanted into this garden. It was diseased at the time but the purchaser did not at once realise this fact. None of his other trees were in any way unhealthy at that date. Some few years after, however, the palm next the newcomer began to turn yellow, and this was followed by others near by. Now there are thirteen palms affected all near together, while the original one has died and been removed. It has not remained confined to this garden but some five or six others adjoining have each a few cases of disease. There can be no possible doubt that the infection of this locality was the direct result of introducing a diseased tree and planting it amongst healthy ones, and the owner himself firmly believes this.

The practice of transplanting palm trees is apparently not rare. If a site has to be cleared for building a house, the palms occupying it are frequently sold by auction. Even large trees are said to be purchased in this way, and are removed with a mass of soil around the roots to a new locality. Where a root disease exists nothing could be more dangerous than this practice, for the infectious matter is introduced into healthy soil and gets a strong footing there.

How the disease has reached palms situated at a distance from its original starting point, without affecting those in between, is not clear. There must be few parts of India with a greater internal movement of population than Travancore, judging from the boat traffic on the backwaters and into Alleppey. It appears probable that the germs of disease have been conveyed from place to place by water, either on raw cocoanut produce or in some other of the many conceivable ways. It must be remembered that the transport of a small quantity of soil or a few cocoanut roots from a diseased to a healthy garden might readily lead to infection of the latter.

It appears probable that no other means of spread exists than from root to root through the soil. Many fungus diseases of plants are disseminated by spores blown through the air. A well known instance of this in Travancore is the coffee leaf-disease. Such blights are characterised by the rapid way in which they spread over the whole of the country where conditions favourable for their existence occur. Every coffee-growing part of South India was attacked in the few years following 1869 when leaf-disease first appeared. It is evident that the greater part of North Travancore is suitable for the growth of the cocoanut root parasite, since outbreaks have occured in so many localities. Hence the slow spread of the disease and the fact that many parts of the coast belt have not yet been affected suggest the absence of air-borne infection. The parasite has only been found on roots below the soil level and, even if spores are formed, they could not easily reach the air. Extension through the soil, however, almost certainly does occur and is practically the only way in which the conditions described above, as found at Alleppey, can be explained.

The spread of a fungus in the soil depends a good deal on soil conditions. Cultivation hinders it, owing to the disturbance and consequent aeration of the upper layers of soil. Imperfect drainage is frequently found to intensify root diseases, probably both because sodden soils allow a more active growth of the parasite and because root development is less in such soils. Drought probably injures both parasite and host-plant, but the latter most, as its damaged root system cannot cope with the demand for water unless moisture is plentiful. In the dry season the leaf symptoms in the Travancore palm disease are at their worst, but a severe drought, which would probably cause a heavy mortality in diseased palms, is not likely to occur in North Travancore. In the whole the evidence is that heavy, ill-drained lands suffer most. In these, especially in clay soils, the growth of the roots is checked; those that rot away are not readily replaced by new ones; the attempt is made but the new roots are feeble and unhealthy from the start.

The most difficult of all fungus diseases to check are those which affect the roots of plants. The parasite which is the probable cause of cocoanut disease in Travancore enters into the tissues of the living roots and is out of the reach of any direct treatment. No ready cure can, therefore, be looked for. Any application which would kill the parasite must be taken up by the roots; with few exceptions these would also kill the roots and do more harm than good. There are other methods however by which we may hope to lessen its ravages and these will be considered in order.

1. *The eradication of the disease by destroying all diseased material and so preventing infection of healthy palms.*—This is the method which is being employed in the palm disease prevalent in the Godavari District of the east coast. In the latter, however, the limits of the disease are well defined and are not very extensive. The disease itself is confined to the "crown," and if this is cut off and burnt all infective matter can be destroyed. In Travancore the disease is scattered throughout a much larger area than in Godavari. Much greater numbers of individual palms are affected and, even were the disease confined to the crown of the tree, it would be a work of great magnitude to attempt to eradicate it by burning all diseased crowns. As in fact such a measure would be useless unless the roots of diseased trees were also dug out and burnt, this method appears to be entirely out of the question as a general procedure.

In a certain number of cases the method of eradication can, however, be adopted. When disease first appears in a new locality there should be no hesitation in applying it. A large number of individual outbreaks appear to have occurred in parts not immediately adjoining a previously diseased area. All Taluk officers should be instructed to watch for the first appearance of disease in any part of their charge not bounded by a diseased area and to take prompt steps to have diseased trees dug up and burnt. There will be many difficulties in the way in carrying out this suggestion. Newly affected palms continue to yield for some years. The owners will naturally oppose their destruction as long as there is a prospect of obtaining any crop from them. This feeling can be lessened if it is pointed out, by means of widely distributed vernacular leaflets, that the disease is infectious and that measures to prevent its spread are undertaken in the interests of the raiyats themselves. If detected in the early stages probably only a few palms will have to be destroyed. Even where a whole garden or a small group of gardens is found to have the disease, the interests of the few should be sacrificed to those of the many whose gardens are still free.

In considering this method of attacking the disease it must be clearly borne in mind that there are two quite distinct sets of circumstances. In the first place there are large and continuous areas of disease such as that in Minachil Taluk, round the margin of which a steady continuous extension is going on. It is questionable if any drastic remedy, such as removing newly diseased trees, is practicable along the margin of such areas. It is probable that nothing short of clearing a belt of palms in front of the disease would prove effective; reinfection from the diseased area would be likely to occur, as long as any healthy palms remained near by. I am not inclined to suggest so large an undertaking. In the second place there are numerous isolated outbreaks occurring away from previously diseased localities. These, if detected early, can be dealt with by the method of extermination at comparatively small expense and with a loss that will be repaid many times over by the palms thereby preserved. Diseased palms of all kinds—areca, cocoanut, talipot, sago and possibly palmyra (if it should be found to

get the disease)—should be removed. After digging out the roots the hole should be well limed and the earth turned over at intervals for a period of about a year to destroy any remains of the fungus. Replanting can then, in all probability, be safely undertaken.

Only the root and base of the stem below ground need be burnt. After digging up they should be split into pieces if necessary, and built around with plenty of dry palm leaves or something of the sort to give an intense heat when fired On no account should the excavated roots be left lying about, for there is a danger of spore formation taking place on the surface and consequently of dissemination through the air. They should be burnt within a few hours of removal.

I believe that it is only by the most energetic action in this direction that there is any chance of checking the spread of the disease to hitherto unaffected parts. Every new localized outbreak serves as a focus from which a gradual but apparently inevitable spread takes place. No part of North Travancore is immune, and it appears to be merely matter of time before the whole area becomes attacked. The outbreak at Alleppy shows that even the coast belt does not escape, and there has been no diminution but, on the contrary, a steady progress there for the past twenty years. The area now affected (about twenty-five acres) is sufficiently defined to make it a good test case of the value of total extermination. If compensation were necessary the amount would not be excessive. At the same time the few gardens affected at Mukolakal, a little distance to the south, should be similarly dealt with; careful search should also be made for any other similar outlying cases.

The questions of compulsory action and compensation do not appear to call for discussion in this report. It is, however, probable that some form of compulsion would be necessary in carrying out the above suggestions.

The staff that would be required and the manner of their recruitment must also be left to the State authorities to consider. Probably the best method of ascertaining the actual requirements would be to depute an officer to make special survey of the diseased Taluks in North Travancore. In this all localities which appear to have been recently infected, or where the disease is confined to a limited area as at Alleppey, should be shown, the distance from the nearest large area of disease indicated and a rough estimate made of the area requiring to be dealt with. To assist in an enquiry of this nature a short description is given below of several other minor causes of ill-health in cocoanut palms noticed in Travancore, sufficient to enable them to be distinguished from the root disease.

2. *Ridding infected soil of the parasite in order to allow of replanting.*—After removing all diseased palms from an infected spot the soil should be rested for at least a year before replanting. During this time it should be "cultivated," *i. e.*, frequently stirred to break up and ærate the soil. Lime should also be added where available as it is likely to hasten the death of any remnants of the parasite left after removing the roots. Quick-lime is better for this purpose than slaked lime.

3. *The application of manures or other substances to the roots of diseased palms.*—A few remedies have been tried by cultivators in various places. As, however, almost all were attracted by the unhealthy condition of the crown and did not think of searching for its cause at the roots, these applications were made, for the most part, to the top of the palm. Some used ashes and lime, others Maravetti (*Hydnocarpus Wightiana*) *poonac*, without effect. Lime was applied to the roots in a few cases and appears to have met with, at any rate temporary, success.

This line of work deserves to be followed up. It is possible that the application of lime or some other substance to the roots may enable new roots to be put out and escape attack, by destroying the parasite in the soil. There is an Agricultural Inspector attached to the Experimental Farm at Trivandrum, and this appears to be work which he could carry out. A small garden with sufficient moderately diseased palms for experimental purposes might be taken up and a series of experiments planned with the ordinarily available manures, supplemented by ammonium sulphate, lime, sulphur and sulphate of iron. Each of these should be tested separately, not in combinations.

4. *Improving the general [illegible] of the palm.*—Cultivation in cocoanut lands might be very greatly improved. This is [illegible]cularly the case in the inland districts, such as Minachil Taluk. In these manuring is pr[illegible]d only to a limited extent; drainage is wholly unattended to; cultivation is neglected. The [illegible]mon condition in the badly diseased gardens along the banks of the Minachil river is a d[illegible] undergrowth of weeds and low jungle, through which the palms grow as best they can. [illegible]re is no drainage, though the land is low-lying, heavy, and in urgent need of it. Drain[illegible] these lands would materially improve the root development and give the plant a cha[illegible]rowing out new feeding roots to replace those destroyed. The great root development of palms on the coast soils is probably the reason why they are less severely affected by the disease.

The presence of a dense covering of weeds on the soil keeps the latter badly aerated and probably promotes the growth of the parasite. Cultivation would break up the soil and may be expected to produce a directly harmful effect on the parasite, apart from improving root development.

The effect of manuring on the disease should be studied. It is certain that anything that stimulates the growth of the palm will improve its resistance to the disease. It is, however, possible that some manures, such as cattle manure or other nitrogenous fertilizers, may also stimulate the growth of the parasite and might do so to an extent that would more than counterbalance the improvement of the palm.

5. *Search for disease resistant varieties.*—A number of varieties of the cocoanut palm are known. Several are enumerated in Ferguson's Ceylon Manual, "All about the Cocoanut Palm." I was not able to ascertain what varieties are recognised as distinct in Travancore nor whether any have shown powers of resisting the disease. Enquiries amongst intelligent growers might elicit valuable information in this direction. It is well known that some varieties of a plant often resist disease much better than others, and if such a variety could be discovered amongst the cocoanut palms of Travancore its value would be very great.

6. *Measures to prevent the introduction of the disease to neighbouring territories.*—There is a very large water-borne trade in cocoanut produce with the neighbouring State of Cochin. Intercourse with the British districts of Coimbatore on the north-east and Tinnevelly on the east is less, and there is probably little export of raw cocoanut produce elsewhere than to Cochin. As the latter is a large cocoanut grower and adjoins on the north the extensive cocoanut districts of British Malabar, it appears that stringent regulations are required to prevent the infection of these areas. For practical purposes it is probable that a sufficient safeguard would be provided by prohibiting the entry of living cocoanut plants (seedlings are, it is believed, sometimes exported) and of roots (said to be used for fuel by metal workers, and also as medicine). I am strongly of opinion that the export of these should be forbidden in Travancore and that all coming from Travancore should be declared contraband by Cochin. From the nuts, coir, oil and, in fact, all the aboveground parts of the tree no danger need be apprehended.

Minor disease of cocoanut palms in Travancore.

The following notes on some other diseases of cocoanuts observed in Travancore are added to enable them to be distinguished from that described above. They are at present of less importance than the latter, though in the aggregate responsible for a good deal of damage. As their causes and treatment are different in each case, it is necessary to be able to recognise them wherever active measures against cocoanut disease are proposed.

1 *Leaf-disease caused by Pestalozzia palmarum.*—This disease is due to a fungus which attacks only the leaves. It first becomes visible on the appearance of little transparent whitish spots on the leaves. These may be only few in number or may, in bad cases, be very numerous. They gradually increase in size and become at first yellowish and then white in the centre. As they grow, two or more frequently run together, leading to large irregular areas of dried-up tissue on the leaf. The margins of the leaf often dry in this manner and, as the dead parts crack and fall off easily, the leaflets become ragged along the edges. Around each spot is a dark brown line, outside which is a ring of pale green or yellow tissue, where the healthy part of the leaf is being invaded by the fungus.

The chief differences between the root disease and this are that in the former a large part of the leaf turns pale and then yellow, without the formation of definite white spots; the ends of the leaflets droop and wither but turn brown instead of white at the tips and edges, and do not become ragged; the central shoot is stunted and eventually withers from above downwards, whereas in the leaf disease the central shoot is little affected, except in bad cases.

A few spots of leaf disease are common on cocoanuts all along the Malabar coast. In young gardens it may become a serious blight, as young palms are more affected than old. In one garden, where the palms were about seven years old, the appearance from a distance resembled that produced by root disease, but closer examination showed no trace of the latter. There was no drooping of the leaf ends; all the leaves were dotted with white spots surrounded by a yellow ring, so close together that the leaves looked quite yellow from a little distance.

Severe outbreaks of this disease have been reported from Java and elsewhere. They have only occurred on young trees and except in the latter the fungus does not appear to do much harm. It is worst in Travancore on neglected young palms and in the garden referred to above an application of manure had resulted in a marked improvement. Cultivation and manuring appear to be all that are required in most cases for its checking.

2. *Bud rot caused by Pythium palmivorum.*—At Changanachery a few cases of this disease in cocoanuts were seen. It is the cause of the Godavari palmyra palm disease, and in the latter district attacks cocoanut and areca palms also, though less severely than palmyras. A general description of the Godavari disease has been published in the Agricultural Journal of India, Vol. I, Part 4, October 1906, and a technical account of the parasite in the Memoirs of the Department of Agriculture in India, Vol. I, No. 5, February 1907. The withering of the central shoot at an early stage of the disease is the most characteristic feature and serves to distinguish it from root disease, in which the central shoot is only affected at a late period.

The first external symptom is the turning white of an entire leaf, usually towards the center of the crown. This is rapidly followed by a similar discoloration of the central shoot or unopened leaf that stands up in the centre of the crown. After a short time the central shoot rots and eventually the whole crown falls off. This is accompanied by an extreme degree of putrefaction,

the whole "cabbage" becoming converted inside into a foul-smelling, putrid mass. The palm may be killed in a few months, so that the attack is much more virulent than in root disease. Recovery is very rare.

On the young unopened leaf blades and the white leaf-bases in the "cabbage," brown spots with a distinct margin will be found. These are covered with a white felt of fungus threads. In Changanachery, *Pythium palmivorum* was found producing its characteristic spores on young leaf blades of cocoanut in the unexpanded stage of the bud. The "cabbage" was so rotted that only small fragments of the fungus could be found elsewhere than on the blades The affected trees were doomed as the apical growing point was affected.

There is no remedy once the centre of the crown is reached. To save neighbouring palms from infection it is necessary to cut of and burn the diseased crown as soon as one or more internal leaves are observed to have withered. This should be done promptly as the disease is highly infectious and is a very dangerous one.

3. *Insect attacks.*—The two well-known large insects which attack cocoanut palms, the black beetle or rhinoceros beetle and the red beetle or palm weevil, are common in Travancore. Only the latter's attacks are liable to be mistaken for root disease and that only exceptionally. In a few cases the weevil attacks the "cabbage" in such a manner as to cause several of the central leaves to turn yellow. These, however, dry up simply because they have been partly eaten through at the base, and consequently they can be easily pulled out, when the cause of the injury will be evident. Most palm climbers will tell at once by examining an affected crown whether it is due to weevil or not, as all are familiar with the white fat grub an inch or two long and with the damage it causes. The black or rhinoceros beetle is common on diseased as well as healthy palms, and its effects may be easily recognised by the ragged appearance of the leaves of attacked trees. These are often partly eaten through while still folded within the bud and, after expanding, a symmetrical portion of the leaf or of a few leaflets is found to have been bitten off.

A scale insect occurs on the leaves in some localities and produces a yellowing which might be mistaken on a superficial examination for root disease. It is easily recognised on turning over the leaf, when numerous colonies of a small brown insect, closely fastened to the under surface of the leaf, will be found.

8.	Best Chrysanthemums not less than twelve varieties to be exhibited singly on Exhibition desks	5—	3—	0
	Total ...	96		

CLASS V.—FRUITS.

		Rs.	Rs.	Rs.
1.	Best Collection of Fruits of all kinds	10—	8—	6
2.	Best Apples, in six or more varieties	10—	6—	0
3.	Best Peaches, in two or more varieties	8—	0—	0
4.	Best Figs, in two or more varieties	6—	4—	0
5.	Best Bananas (only of the finest varieties)	5—	3—	0
6.	Best Raspberries ...	3—	0—	0
7.	Best White Grapes in three or more varieties	8—	6—	0
8.	Best Blue Grapes in three or more varieties	8—	6—	0
9.	Best Guavas	4—	0—	0
10.	Best Papayas	6—	3—	0
11.	Best Pumeloes	6—	0—	0
12.	Best Oranges	6—	0—	0
13.	Best Sweet Limes	4—	0—	0
14.	Best Sour Limes	4—	0—	0
	For bona-fide growers only.			
15.	Best Collection of Fruits of all kinds	15—	10—	0
	Total ...	155		

NOTE.—In fruits generally quality and flavour are more important than size and colour. In group 15 the fruit must be certified to have been grown by the exhibitor himself.

CLASS VI.—VEGETABLES.

		Rs.	Rs.	Rs.
1.	Best Potatoes, in six or more varieties, half maund of each ...	10—	6—	4
2.	Best Cabbage, not less than three	6—	4—	0
3.	Best Brussels Sprouts ...	6—	0—	0
4.	Best English Carrots ...	6—	4—	0

CLASS VI.—concld.

Group.	Description.	Prize—I.	II.	III.
		Rs.	Rs.	Rs.
5.	Best Blanched Celery ...	6—	4—	0
6.	Best Cabbage Lettuce ...	5—	0—	0
7.	Best Cos Lettuce ...	5—	0—	0
8.	Best Endive ...	5—	0—	0
9.	Best Green Peas ...	6—	4—	0
10.	Best Parsnips ...	5—	0—	0
11.	Best Beetroot ...	5—	0—	0
12.	Best Onions ...	5—	0—	0
13.	Best Turnips ...	5—	0—	0
14.	Best Knol-khol ...	6—	0—	0
15.	Best Custard Marrow ...	6—	0—	0
16.	Best Asparagus ...	8—	0—	0
17.	Best Cauliflower, not less than three	8—	4—	0
18.	Best Tomato, not less than three varieties	6—	0—	0
19.	Best Hill Gooseberries ...	3—	0—	0
20.	Best Cho-cho	6—	0—	0
21.	Best Yams	8—	4—	0
22.	Best Brinjals	6—	0—	0
23.	Best Basket of English vegetables	15—	10—	6
24.	Best Collection of Sweet Herbs...	6—	0—	0
25.	Best Bendekayi	4—	0—	0
26.	Best Hagalakayi	4—	0—	0
27.	Best Gorikayi	4—	0—	0
28.	Best Huralikayi	4—	0—	0
29.	Best Padavalakayi	4—	0—	0
30.	Best Budikumbalakayi ...	4—	0—	0
31.	Best Collection of Country vegetables in kinds other than those mentioned above	8—	0—	0
	For private gardens only.			
32.	Best Brussels Sprouts ...	6—	0—	0
33.	Best Celery	6—	0—	0
34.	Best Green Peas ...	6—	4—	0
35.	Best Asparagus	8—	0—	0
36.	Best Dessert Tomatoes ...	6—	0—	0
37.	Best General Collection of European vegetables	15	10—	0
	Total ...	296		

NOTE.—In vegetables quality is of paramount importance, size often indicates coarseness. *Groups* 32—37: In these groups inferior quality will disqualify an exhibit.

CLASS VII.—MISCELLANEOUS.

		Rs.	Rs.	Rs.
1.	Best Collection of Fruit trees grown in pots	15—	0—	0
2.	Garden Tools and Implements ...	8—	5—	0
3.	Garden Sundries as pots, manures, labels, etc.	10—	5—	0
4.	Garden Furniture	15—	0—	0
	Total ...	58		

NOTE.—*Group* 1. Trees ready for fruiting or in fruit are meant.

Group 4. Articles such as garden seats, tubs, garden tables, jardinieres, etc.

Grand Total ... Rs. 1,073

GENERAL CONDITIONS.

1. In view to arrangements being made for staging plants, it is requested that exhibitors will notify to the undersigned, at least four days prior to the Show, what number of pots they intend to enter and for what prize they intend to compete.

2. Plants intended for competition should be delivered in the Conservatory before 4 P.M., on the day previous to the Show.

3. Cut Flowers may be delivered up till 2 P.M., on the day of the Show, but not later if intended for competition.

4. No prize shall be awarded unless there are at least two competitors for it, except in cases of rare excellence, when the Judges will use their own discretion.

The number of exhibits in all classes and sections should exceed the number of prizes offered, otherwise the Judges will be authorised to reduce the full value of such prizes.

5. It shall also be competent for the Judges to reduce the amount of prizes if, in their opinion, the articles exhibited do not merit the full sums.

6. Obtrusive staging, overcrowding, packing to conceal blemishes, and artificial support to blooms, etc., will be judged as defects to an exhibit, preference being given to natural growth and artistic arrangement.

7. Where a number limit is laid down, any exhibit exceeding that number shall be disqualified.

8. Where one plant of each kind or variety is specified as a condition, any exhibit containing duplicates shall be disqualified.

NOTE.—For the purpose of the exhibition the words kinds and varieties may be illustrated as under:—apples, oranges, figs, grapes, etc., are distinct *kinds* of fruits. Ribston Pippin, Blenheim Orange, Golden Reinette, etc., are distinct *varieties* of apples. Roses, Chrysanthemums, Dahlias, etc., are distinct kinds of flowers.
Marechal Niel, Crimson Rambler, La France, etc., are distinct *varieties* of Roses. Cabbage, Beans, Beet, Carrot are distinct *kinds* of vegetables. Sugarloaf, Early Drumhead, Enfield market, etc., are distinct *varieties* of Cabbages.

8*a*. Two or more persons may not compete for prizes separately with plants, etc., from the same garden.

9. If funds are available, the Judges may award special extra prizes in cases of exceptional merit.

10. All exhibits sent for competition must be *bona-fide* the produce of, or have been raised by, the exhibitors; and unless otherwise specified, must have been grown in Bangalore.

The Judges may withhold any prize until proof of these conditions be produced. Contractors bringing up fruit and vegetables for competition in their own name can compete for prizes but not for medals.

11. Exhibitors will not be permitted to remove their exhibits until the Show is closed, and gardeners and others found offering articles for sale before 6 P.M., on the day of the Show shall be summarily ejected.

12. The names of exhibitors can only be attached to exhibits when the judging has been completed. Plant labels will be supplied by the Show executive, subject to the approval of the same.

The following Rules for awarding medals at the Horticultural Shows are hereby notified to the public:—

The Government of His Highness the Maharaja have sanctioned the grant of medals in addition to the usual money prizes offered at the half-yearly Horticultural Shows, subject to the following conditions:—

(1) The medals will consist of, a gold medal for classes I, II and III, a silver medal for class V and a bronze medal for class VI.

(2) These medals will be awarded by the Judges, at their discretion, at the Summer Show held in July or August in each year.

(3) The following exhibitors will be qualified for the award of a medal:—

(*a*) The exhibitor of the best all-round exhibit in the appropriate class or classes, taking the two shows of the calendar year together.

(*b*) The exhibitor of an exhibit of more than ordinary excellence in any group.

(*c*) The exhibitor of any specially meritorious novelty.

(4) No exhibitor who has been awarded a medal in any class will be qualified to receive another medal in that class during the three calendar years succeeding that in which he has received the medal.

(5) No exhibitor will be qualified to receive a medal who is not the *bona-fide* cultivator of his exhibit or the actual occupant of the garden in which the exhibit was raised, *e.g.*, no contractor, who has merely purchased fruit or vegetables exhibited will be eligible.

(6 It will be open to the Judges to withhold any or all the medals in any year on the ground of deficiency of merit in the exhibits.

G. H. KRUMBIEGEL,
Supt., Govt. Gardens.

Prices of food grains—Rice	...	7¼	5¾ to 6	seers per rupee.
Ragi	...	19½	12 to 13	

Agricultural operations.—Sowing of ragi, avare and cholum. Cattle are in good condition. Water and fodder sufficient.

BANGALORE CITY AND TALUKS.

8. Market well supplied.

9. *Standing crops, viz.*, gingelly, haraka, sugar-cane, mulberry and castor are reported to be in good condition.

Crops sown.—The sowing of ragi, avare and togari is nearing completion in all the taluks of the district. Karthika paddy is being sown under the tanks in the Hoskote, Anekal and Channapatna Taluks.

10. Stock of food grains sufficient. But their prices continue to remain stationery and high.

11. Public health generally good.

12. Cattle are reported to be affected with "Dod Roga" in the Kasba, Jala and Kundana hoblis of the Devanhalli Taluk. It has subsided in the Kankanhalli and Nelamangala Taluks Drinking water and fodder are available in sufficient quantities.

KOLAR.

8. Market well supplied.

9. *Agricultural operations.*—Dry lands are being ploughed throughout the district for sowing ragi, avare, horse-gram and togari.

Standing crops are reported to be in good condition.

Crops sown.—Togari in Bowringpet, Mulbagal, Chikballapur and Malur; same in Chintamani, Chikballapur and Gudibanda; horse-gram in Sidlaghatta and Malur; castor in Bowringpet; paddy in Gudibanda; ragi and avare in almost all the taluks of the district.

Crops harvested.—Nil.

10. Prospects of the season fair. But rain is badly needed throughout the district and it is eagerly looked for. Food stuffs are available, but their prices remain high.

11. Except for a case of cholera in the Bayapalli village, Srinivaspur Taluk, a case of plague in the Sugatur village, Sidlaghatta Taluk, and fever and small-pox in parts of the Gudibanda Sub-Taluk, public health generally good.

12. Cattle generally healthy, but it is reported that "Rinderpest" prevails in parts of Kolar, Chintamani, Goribidnur and Gudibanda; and "Chappe Jadya" in Gudibanda. Water and fodder available.

TUMKUR.

8. Market well supplied.

9. *Standing crops* are reported to be in moderately good condition. Dry crops in Tiptur and Turuvekere are withering for want of rain and in Maddagiri, Sira and Kunigal, they require more rain.

Crops sown.—Ragi, avare and togari in Chiknayakanhalli, Sira, Gubbi, Tiptur, Kunigal, Koratagere and Turuvekere; ragi, paddy and horse-gram in Tumkur; savé and navané in Pavagada; and haraka in Turuvekere.

Crops harvested.—Sugar-cane in Tumkur, nati ragi in Sira, paddy in Gubbi and Turuvekere; and baragu and green gram in Tiptur.

10. Rain is needed throughout the district except Tumkur. Food stuffs available.

11. Except that cholera is reported to prevail in the villages of Kanathur and Turumanakote in the Turuvekere Sub-Taluk, public health generally good.

12. "Dod Roga" is prevailing among cattle in parts of the Tumkur, Chiknayakanhalli, Pavagada and Kunigal Taluks. Water and fodder are available for the present. Date leaves are also being used as fodder in parts of the Sira and Tiptur Taluks.

MYSORE.

8. Market well supplied.

9. *Agricultural operations.*—Dry and wet lands in parts of the Seringapatam, Gundlupet, Malvalli and Mandya Taluks are being ploughed and made ready for sowing. Paddy is being transplanted in parts of the Seringapatam, Nanjangud, T.-Narsipur and Malvalli Taluks.

Standing crops are reported to be in moderately good condition in all the taluks. But cholum in parts of the Gundlupet and Nagamangala Taluks are reported to be withering for want of rain. Til in parts of the Nagamangala Taluk is reported to have somewhat suffered for want of rain.

Crops sown.—Ragi in parts of the Gundlupet, T.-Narsipur and Malvalli Taluks.

Crops harvested.—Cholum in parts of the Nanjangud and T.-Narsipur Taluks and both cholum and til in parts of the Chamrajnagar Taluk.

10. Prospects of the season generally good, but standing dry crops in parts of the Chamrajnagar, Nanjangud, Malvalli, Mandya and Nagamangala Taluks are reported to be in need of rain. Raiyats and merchants have sufficient stock of food grains for the present.

11. Except for plague in a few places in the district, public health generally good.

12. Cattle in parts of the Mysore, Chamrajnagar, Heggaddevankote and Hunsur Taluks are reported to be suffering from "Dod Roga." They are reported to be healthy in other places. Water and fodder are available throughout the district.

HASSAN.

8. Market well supplied.

9. *Agricultural operations.*—Paddy in Hassan, Belur and the Alur Sub-Taluk and paddy and ragi in the Hole-Narsipur Taluk, are being transplanted.

Standing crops.—Paddy, ragi, sugar-cane, togari, castor and gingelly are in good condition.

Crops sown.—Dod ragi and avare in the Hassan Taluk.

Crops harvested.—Sugar-cane and gingelly in the Channarayapatna Taluk. It is reported that avare has been somewhat damaged by cater pillar in the Arsikere Taluk.

10. Prospects of the season generally good. Withering dry crops in the Arsikere Taluk require rain.

11. Except for plague in parts of the Hassan and Belur Taluks, public health is generally good. It is reported that in the Hassan, Manjarabad and Belur Taluks, a peculiar kind of non-contageous kind of ulcer on the leg is prevalent among the people there.

12. Cattle are generally in good condition. "Dod Roga" has abated in most parts of the district. Water and fodder are procurable, except in the Arsikere Taluk, where the supply of fodder is reported to be deficient.

SHIMOGA.

8. Market well supplied.

9. *Standing crops, viz.*, paddy, ragi, cholum, sugar-cane, green gram, black gram, cow gram and gingelly are in good condition in all the taluks. Arecanut crop is attacked with "Kole Roga" (Rot) in portions of the Sagar Taluk.

Crops sown.—Paddy, ragi and cholum are being sown in portions of the Channagiri Taluk.

10. Prospects of the season generally good. Food stuffs are available in sufficient quantities.

11. Public health generally good. Plague has subsided in the Kumsi Sub-Taluk.

12. Cattle generally healthy. But murrain prevails in the Shikarpur Taluk. Water and fodder available.

KADUR.

8. Market well supplied.

9. *Agricultural operations.*—Transplanting of paddy is going on in Chikmagalur, Koppa, Mudgere, Yedahalli and Sringeri.

Standing crops.—

In Chikmagalur—Paddy, ragi, sugar-cane, avaré, gingelly, castor, cholum, coriander, black gram, green gram, togari, onion and garlic.

In Kadur—Ragi, cholum, gingelly, black gram and green gram.

In Tarikere—Paddy, ragi, cholum, black gram, green gram, sugar-cane and gingelly.

In Koppa—Paddy, sugar-cane, areca, cardamom, pepper and coffee.
In Mudgere—Paddy and ragi.
In Yedahalli—Paddy and sugar-cane.
In Sringeri.—Paddy and areca.

All the above are reported to be in good condition.

Crop harvested and its yield.—

Kadur—Sugar-cane, yield 8 annas.

10. Prospects of the season good. Food stuffs sufficient. More rain is needed in parts of the Chikmagalur and Kadur Taluks.

11. Public health generally good.

12. Cattle generally healthy. But "Dod Roga" is still prevailing in parts of the district. Water and fodder available.

CHITALDRUG.

8. Market well supplied.

9. *Standing crops.*—Such as, cholum, ragi, black gram, green gram, paddy, cotton, sajjè, savé, sesamum, castor, togari and avare are reported to be in good condition.

Crops sown.—Ragi in the Chitaldrug, Challakere, Holalkere and Davangere Taluks; avare in the Chitaldrug and Holalkere Taluks; sajjè in the Chitaldrug, Hiriyur and Jagalur Taluks; togari in the Chitaldrug, Holalkere, Hiriyur and Davangere Taluks; navane in the Chitaldrug, Hiriyur and Jagalur Taluks; kuresani in the Chitaldrug Taluk; sesamum in the Hiriyur and Molakalmuru Taluks and the Harihar Sub-Taluk; cholum in the Hiriyur, Holalkere, Davangere and Jagalur Taluks and the Harihar Sub-Taluk; haraka in the Hiriyur and Holalkere Taluks; savè in the Hiriyur and Davangere Taluks; castor and black gram in the Holalkere Taluk; paddy in the Holalkere Taluk; cotton in the Holalkere, Davangere and Molakalmuru Taluks; and horse-gram in the Davangere and Jagalur Taluks.

Crops harvested.—Nil.

10. Prospects of the season fair. Rain is wanted throughout the district. The rainfall in Parasurampur and in the villages of Budenhatti and Hirehalli in the Challakere Taluk, and Bommagondanakere and Megalhalli in the Molakalmuru Taluk, is reported to be so scanty that no grass is said to have sprung up there. The Amildars of these two taluks have applied for sanction to allow the raiyats of these villages to take Kamara leaves from the State Forests close by Food stuffs available.

11. Public health generally good.

12. Cattle healthy, but "Rinderpest" prevails in parts of the Hiriyur and Holalkere Taluks. Water and fodder available.

BANGALORE,
29th July 1908.

A. RANGASWAMI IYENGAR,
Revenue Commissioner.

Prices Current [Wholesale] of Food Grains, &c., at the Head-Quarters of the several Districts of the Mysore State during the fortnight ending 15th July 1908.

B. NAGAPPA, ESQ., (Bar-at-law).

SYED AMIR HASSAN, ESQ.

C. S. BALASUNDARAM IYER, (Secretary).

7208 /

THE SECRETARY reported that Mr. K. S. Chandrasekhara Aiyar took his seat as an additional member of the Council.

THE SECRETARY reported that Regulation I of 1908 to amend the Mysore Court Fees Regulation, III of 1900, and Regulation II of 1908 to amend the Mysore Stamp Regulation, II of 1900, had received the assent of His Highness the Maharaja.

MR. T. ANANDA ROW moved for leave to introduce a bill called the "Mysore Newspapers Bill" to provide for the efficient control of the publication of newspapers and other printed works containing public news, and in doing so said,—

The Government of His Highness the Maharaja have had under consideration the question of placing the publication of newspapers in Mysore under better control, and of providing more effective means than are available under the existing law for dealing with that section of the public Press in Mysore which has for some time past been creating considerable mischief by misrepresenting the actions of the Government and attributing unworthy motives to it, and by indulging in remarks calculated to promote racial hatred, and in objectionable criticisms of the British Government in its relations with its own subjects as well as with the Native States. His Highness' Government view with extreme disapproval the attempts made by organs published in the State to mislead and prejudice the people of Mysore against the Paramount Power.

Action of the kind contemplated is all the more necessary in view of the pernicious effects this class of writing is calculated to have on the minds of ignorant and uninformed persons generally and of students and young people in particular, by undermining the feelings of reverence associated with His Highness personally and by destroying all respect for authority. It would be a grave error to underestimate the degree and the extent of these evil effects, since newspapers are in these days no longer limited in their circulation to the better educated classes who are in a position to discount misstatements. On the contrary, owing to the policy of Government in promoting elementary education among all classes, every section of the community, rural as well as urban, is now exposed to the influence of the Press, whether for good or for evil; and, consequently, a new responsibility is imposed upon the Government to protect the ignorantly credulous from evil influences which it is within their power to control.

The language adopted by some of the newspapers in question would imply that His Highness is not responsible for the actions of his Government, that he is dissociated from his Government and that he does not concern himself personally with the administration of the State. It is necessary once again to affirm in the clearest manner that His Highness is personally and solely responsible for the good government of the country and that while all fair, honest and *bona fide* criticism of his administration is welcomed, comments cannot be permitted in the public Press which pass the bounds of such criticism, or tend to bring his administration into contempt, or misrepresent the motives and actions of his advisers and officers.

The legislation we propose to adopt is not a new idea. Attempts have been made by the Government in the past to deal with the growing evil. A perusal of the excerpts from the newspapers published in the State during the past six months will show to you how demoralising in its effects is the literature purveyed by these newspapers. When the law gives the necessary powers for controlling the possession and use of arms, explosives, poisons and other dangerous substances, for preventing the spread of contagious diseases and prohibiting acts which are likely to endanger the public safety, it is certainly an anomaly that the Government should be powerless to arrest the dissemination of the far more dangerous and hurtful moral poison which journals of the type under notice instil into the public mind week after week. The common people are not sufficiently educated to properly discount the utterances of journals of this character. To them, everything which appears in print has the authority of matter published in the Government Gazette. In fact to the people in the country side every printed sheet in a gazette. You may have heard of patent medicines advertised in the vernacular newspapers being eagerly sought after and readily purchased because they had been published in what

they call "the Gazette." It is notorious that when in the beginning of last year, certain local newspapers gave currency to false stories about the intended assumption of the Kolar and Bangalore Districts by the British Government, every word of it was believed as true even in remote corners of the State. Considering the relations existing between the Ruler of a Native State and the Paramount Power, the Government of His Highness cannot neglect the responsibility which lies upon them to prevent the loyalty of his subjects to the Paramount Power from being undermined in the manner which the British Government might well resent, by reckless and mendacious statements of the character described. In Mysore in particular, these carping and ill-natured criticisms of the Paramount Power are singularly inappropriate and highly unbecoming in that the State has from the beginning of its constitution been the recipient of special consideration from the Paramount Power and the object of its continued solicitude. There is also the less justification in Mysore for misstatements and misrepresentations of the kind, as the Government has at all times been ready to place at the disposal of the Press and of the public such information regarding its actions and intentions as can be published without detriment to public interests. With this view a Press Room has been opened and the Proceedings of Government intended for publication are placed on the table. The meetings of the Representative Assembly also afford to the members of the Assembly the opportunity to elicit information on matters of public interest first-hand from the Government; the meetings are open to the public and the subjects brought forward by the members are discussed in public. Nor, if other practical means can be suggested for affording further facilities to the public for obtaining early and correct information on public matters, will the Government be backward in adopting them.

There is danger to the State also from another class of criticisms which we frequently meet with in these excerpts. The newspapers evidently think that by systematically vilifying His Highness' Government and his officers, they are doing nothing to impair his position as the Ruler of the State. It cannot be too frequently or too emphatically impressed on the newspapers that in spite of all the Councils and assemblies and administrative organizations, the basis on which Government rests is autocratic in its nature, since all power and responsibility are vested in His Highness the Maharaja, who is personally and solely responsible for the good government of the country. The administrative arrangements made both at the Rendition and at the Installation of His Highness the present Maharaja may have to some extent obscured the real nature of the kind of rule under which the State is administered; and possibly these and the fact of Mysore having been under the administration of the British Government for 50 years before the Rendition may have led to doubts being entertained as to the power of the Government to adopt laws for the regulation of the public Press at variance with those prevailing in British India. But from the description I have given of the nature of the rule under which Mysore is governed you will understand that His Highness the Maharaja has absolute power to regulate the public Press. I may refer in this connection to the action taken in the year 1894 in the Desabhimani case, and to the warning publicly conveyed in the order passed on the *Suryodaya* incident of last year, from which it is clear that, in legislating on the subject, the Government are not creating any new punitive power more formidable than that which is already inherent in His Highness' sovereign prerogative. Such being His Highness' undoubted powers it might be argued that it would be sufficient if similar executive action were taken in the case of any newspaper that actually offended. But on mature consideration, His Highness has arrived at the conclusion that in the interests of the newspaper Press itself, and in order to avoid as far as possible the necessity for employing the severe disciplinary measures which constitute the ultimate remedy in cases of extreme misconduct, it is advisable to introduce the present general measure which, while not imposing any harassing restriction on the legitimate liberty of the Press, will serve to remind the editors and publishers of newspapers of the obligations attaching to their responsible calling and of the penalty which will follow violation of the same.

The provisions of the new law which we propose to introduce are very simple and it is unnecessary to comment on them at any great length. Section 2 provides that no newspaper shall be published without the written permission of Government.

If any person contravenes this provision, section 4 empowers Government to require him to leave Mysore within seven days and to prohibit him from re-entering the State without permission and also, if necessary, to declare the Press and all its plant to be confiscated. Failure to leave the State or re-entry without permission will, under section 5, entail the forcible expulsion of the offender. In order to provide for the contingency of contumacious disobedience on the part of a suppressed newspaper, sections 6 and 7 provide for the exclusion from Mysore Territory of a Mysore paper which, after being prohibited under the Regulation from publication in the State, removes itself to British India and from there continues to circulate the newspaper in Mysore, and also for the exclusion from Mysore of any paper, *e.g.*, the *Yugantar* which has been prohibited in British India. If any such prohibited newspaper is circulated in Mysore, section 7 provides that the District Magistrate may declare all copies of such newspaper, wherever found, forfeited to Government and take steps to seize all such copies, and that the Government may deal with the offender in the same manner as if he had printed or published a newspaper without permission, by requiring him to leave Mysore and prohibiting him from re-entering the State. I must not omit to refer also to section 3 of the Regulation which provides that any permission given under section 2 may at any time be withdrawn by the Government. This is perhaps the most important provision of the bill, but I may take this opportunity to give the assurance that in undertaking the present legislation, no change of policy is intended and that the Government do not mean to interfere with mere criticisms of the administration. To quote from the order passed in the *Suryodaya* case, "His Highness' Government cannot accentuate too strongly the fact that it is not to any criticism of His Highness' administration that they take exception. Criticism when well-informed they are prepared to welcome heartily; and when it is ill-informed and even when it appears to be spiteful, they are ready to accord it the fullest toleration. They draw the line, however, at the dissemination of absolute untruths which are calculated to excite apprehension among His Highness' subjects as to the good faith of the British Government and which reflect injuriously no less upon the person than upon the administration of His Highness the Maharaja."

The present Bill is almost entirely a reproduction, with the necessary variations to adapt it to Mysore, of the British enactment now in operation in the Civil and Military Station of Bangalore; the only addition that is made is with reference to forfeiture of the printing press. It is obvious that an enactment of this kind, passed with a view to enable the Political Agent to deport blackmailers who may take shelter in tracts situated within Native Territory, but administered by the Political Agent, presupposes the power on the part of the Native State to deport such blackmailers and disseminators of dangerous falsehoods from its own territories.

I may also be permitted to say that because a law of this kind is proposed to be brought on the Statute Book, it does not follow that it will be put into force in regard to all or any of the newspapers published in the State. Judging from the analogy of the Civil and Military Station of Bangalore where the enactment is not known to have been enforced even in a single instance during the 17 years it has been in operation, I should imagine that no occasion will arise for enforcing the proposed Regulation in Mysore. But the necessity for a Regulation like this is imperative. If the various evils to which reference has been made in the Statement of Objects and Reasons are to be effectually remedied, if the weakening of His Highness' authority by persistent misrepresentation of his Government is to be prevented, if the dissemination of untruths about the Paramount Power is to be put a stop to, if the attempts to promote racial feud are to be checked, and above all if the rising generation is to be protected from demoralization which, under present conditions, is facilitated by that very spread of education which it is the duty of the State to encourage, and which, by the recent action of the State in making vernacular education in all classes of primary schools completely free, will reach all sections and grades of the population, thus imposing an added responsibility on the State, we must not hesitate to adopt a law of the kind which is the only effective means of keeping editors and publishers of newspapers in mind of their duty to society and of the limitations under which a business having so important a bearing upon the well-being of society can be conducted.

MR. SYED AMIR HASSAN in seconding the motion said,—Sir, it is my humble opinion that the introduction of a Regulation like the one now under consideration is very necessary in Mysore. I have often observed the mischief created by misrepresenting the actions of Government and publishing scurrilous articles against public servants of all ranks. Most of these papers being very cheap and sensational are freely subscribed for by village officers and hobli school masters throughout the State who take a delight in reading out those articles to the villagers with running comments of their own, which tend to create hatred towards Government and its officers and to lower the estimation in which Government and its officers are held.

I can say from my own experience that, irrespective of the other mischief done, the prestige of the public authorities has suffered much during the last 25 or 30 years as the result of such irresponsible journalism and I should therefore think that on this as well as on other grounds it is high time the source of evil was checked.

For these reasons I beg to cordially support the measure now introduced.

The motion was put and carried.

MR. T. ANANDA RAO moved that the rules of business be suspended to permit of the Bill being taken into consideration immediately and passed.

MR. K. P. PUTTANNA CHETTY seconded the motion.

The motion was put and carried.

MR. T. ANANDA RAO moved that the Bill be taken into consideration and passed.

MR. SYED AMIR HASSAN seconded the motion.

The SECRETARY read the Bill for the information of the Council.

MR. RANGIENGAR:—Mr. President,—I deplore the circumstances which have necessitated the introduction of the Bill. Around us in parts of British India events are happening which augur ill to the country. The beneficent work of a century of steady, patient and disinterested rule, with all its assured progressive tendencies is being undone by mad impulses which are suicidal, inhuman and un-Aryan.

India is essentially a country in which the virtues of loyalty, respect for authority, obedience to law and abhorrence of every species of crime and violence are not needed to be taught and acquired, but are innate and instinctive. The vast majority of the people are staunch on the side of law and order and view with detestation the recent outrages and acts of lawlessness perpetrated by insane mobs or imbecile individuals. A section of the Press in India oblivious of its supreme responsibility has unfortunately chosen to disseminate the most pernicious ideas. The paramount Government, whose first duty is to preserve peace and order, was therefore constrained to have recourse to repressive measures for counteracting and eradicating the forces that make for violence, disorder and anarchy.

In Mysore the people happily remain firm in their loyalty to their Ruler and to the supreme Government. His Highness the Maharaja not long ago gave public and authoritative expression to his own and his people's liveliest feelings of friendship and gratitude to the British Government. His Highness' subjects look upon his word as law and render cheerful and implicit obedience. And yet, I regretfully feel bound to admit, after reading the speeches alluded to by Mr. Ananda Rao, the correctness and cogency of the reasons in support of the Bill. The learning, the zeal and the ingenuity displayed by them are worthy of better purposes than those to which they have been applied. Criticism of the Press within the limits set by law and morality, is productive of much good. But when it transgresses those limits, it degenerates into license and wields enormous power for mischief and evil. Without therefore questioning the propriety of remedying an existing and growing evil, at one time it occurred to me that recourse to legislation was unnecessary because His Highness the Maharaja has ample inherent power to take such steps as he may deem proper for dealing with the newspapers conducted in a spirit of malicious hostility to the best interests of the State. But I am now satisfied that by bringing the measure before the Council, certain distinct advantages are derivable such as demonstrating the confidence of Government in the justness and appropriateness of the Bill, the willingness of Government to subject its provisions to public

discussion in Council and the esteem in which the Council itself is held. If the Bill is passed by the Council and eventually becomes law, it will go on the Statute Book of Mysore with all the moral support which conformity to established methods never fails to secure. Sir, I heartily approve of the principle of the Bill.

MR. NAGAPPA:—Sir, I regret the force of circumstances which necessitated the Government of His Highness the Maharaja of Mysore to introduce this measure.

I feel that I shall not be justified in recording a silent vote upon this Bill, without expressing my reasons. With the spread of primary education among all classes due to the establishment by the Government, of village and hobli schools, where elementary education was given almost free—now made completely free—grew the desire to read newspapers. The increasing activity in all walks of life in our State during the last quarter of a century contributed not a little to the demand for news of all sorts. Not only are many more papers published now than even a few years ago, but the number of copies of individual papers has increased also, especially in the case of Vernacular papers. It is but a truism to say that the Press in Mysore, as it is in British India, has greater influence now than ever. As a member of the agricultural community which forms the bulk of the population of the State, and as a representative of the Bar, I have had great opportunities of coming in contact with the people and to know exactly the working of their mind. We all know that national aspirations in them are nascent and that they have been influenced to a great extent by what appears in the public Press. I was more than astonished to find in many instances some persons, who have received some education, namely, those who are able only to read and write their mother-tongue, blindly believing some of the misstatements appearing in Vernacular papers and arguing important questions both of State and Imperial politics, upon the incorrect data furnished to them by some of the newspapers. They are, as a rule, so credulous and uninformed as not to discount misstatements in newspapers and often mistake them for authoritative statements published in a Gazette. It is my sad experience to find that the Press in general, and in particular the Vernacular Press in Mysore, has not exercised a healthy influence over the credulous and uninformed great mass of the people of the State and over the impressionable and immature minds of the youth.

The leading journals of the Western countries and especially in Great Britain wield considerable influence in everyday life and express popular opinion more directly than Parliament itself. This considerable influence is mainly due to the fact that these organs are owned and edited by persons whose enterprise, insight and judgment is of a very high order, who take a personal interest in journalism and have a full sense of their responsibilities in relation both to the guidance of public opinion and to the position of the journalistic profession.

I hope I shall not be mistaken when I say that the Press in general, and in particular the Vernacular Press, in Mysore, is by no means perfect. It is also my sad experience to find that some of the newspapers in the State are not conducted by the proprietors, managers or editors with a full sense of their responsibilities in relation both to the guidance of public opinion and to the position of the journalistic profession. I hold very strongly regarding the mischief that is caused and is ever likely to be caused by allowing unchecked the publication of such newspapers. We have had sufficient experience of recent horrible bomb outrages in the north, which were according to the records of confessions of one of the prisoners committed by persons who had been incited by the writings in *Yugantar*. The excerpts we have seen from some of the newspapers published in the State, only confirm my sad experience in respect of the evil influence of some of these newspapers. Judging from the great opportunities afforded to ever place at the disposal of the Press correct and first-hand information in matters of public interest, and the failure of some of the editors to avail themselves of this opportunity in spite of the invitation to do so, it is evident that the proprietors, managers or editors, who have published these excerpts have not realized their high sense of responsibility to the public and to their own profession.

It is the duty of every right-thinking and patriotic person to help the development of the embryo National aspirations which are just beginning to shape themselves and to direct all the forces that are working towards its realisation to right

channels by checking effectively the evil influences of the seditious writer and preacher.

The principle of the Bill is to vest in Government the general control of the Press in Mysore so that it may effectively deal with such of the newspapers as disseminate seditious matter and have degenerated from liberty into unrestricted license. The main provisions of this Bill are adopted from the Regulation in force from 1891 in all the territories beyond British India, administered by the Governor-General in Council, and there was never an occasion either to put an end to the publication of any newspaper or to muzzle the freedom of the Press.

By bringing this Bill on the Statute Book, it serves as a constant reminder to any person engaged in the noble profession of journalism of his high sense of responsibility to the public, and to the high traditions of his profession; and that any dereliction of his duties will render him liable not only to the censure of the public, but also to the penalty which this law imposes. With this reminder constantly before him, he is bound to preserve the high traditions of the profession which wields considerable influence in everyday life.

Believing as I do that this Bill aims at checking the publication of such of the newspapers as preach sedition openly and thus spread anarchism in the country and are a common curse to society and to constituted authority, I heartily vote for the passing of this measure.

MR. BHABHA :—Sir,—If I may be permitted to speak a few words on the subject under consideration, I would lay special stress on two points relating to the ways in which badly conducted papers have for many years past done serious harm to the administrative work of Government, and to the character of the growing youth of the country.

Irresponsible and scurrilous writers have made it their business systematically to distort out of shape and misrepresent the public acts of high officers by putting the most ingenious construction upon them, and to attribute to them motives of all kinds in the most uncharitable manner when the officers have merely been doing their duty honestly and to the public. They invent from a diseased and perverted imagination circumstances which have no foundation in fact, merely for the purpose of bringing authority into contempt or satisfying a private grudge against those officers for whom they have conceived a dislike. This vilification of the character and actions of public men which some journalists have systematically practised has tended to weaken their authority and the discipline of their departments. Even when the means of ascertaining the actual facts are within easy reach, they do not make the least attempt to avail themselves of them, but delight in bringing all authority into contempt by perverting and misrepresenting facts. They take a grim pleasure in encouraging false complaints and insubordination, and destroying the loyalty and good feeling of subordinate officials. The credulous and ignorant public who have great faith in all that appears in print are taught to look upon Government Officers as their enemies and not as men who are honestly doing their duty by the public and trying to promote their interests and welfare. In administrative work where justice has to be held evenly between conflicting interests and claims, the dissatisfaction of higher authorities must cause dissatisfaction to some. And if every one who is dissatisfied is allowed freely to magnify and air petty grievances in the press, it can easily be understood how the work of administration is hampered and unnecessarily difficult and how discipline is destroyed.

There are, however, to my mind more serious effects produced by this kind of scurrilous journalism on the minds of the youth of the country. Youth is a time of strong impulses, quick sympathies, impracticable ideals. When undeveloped minds and unformed characters are influenced day after day by the spontaneous outpourings of diseased intellects, we can see how the feelings of young men can be easily aroused against people in authority, how their generous impulses can be stifled, and how false notions of patriotism can be implanted in their minds which easily lead them to rash and unrestrained actions. When, however, young men who should scrupulously abstain from all spurious patriotism and mischievous agitations have the misfortune to have cheap papers near at hand to mis-

It is the cheap local prints ready to hand that are most dangerous to the morals and character of youth. It is these papers that are usually conducted without regard to principles of fairness or a trace of liberality of views. The seeds planted by such journals in early youth fructify later in life and are apt to create a class of citizens who are disloyal and discontented. Happily the Government of His Highness the Maharaja are alive to this danger and are taking effective measures to avert a great danger to the people of the country.

The important law which is about to be passed will it is hoped rid the State of an infamous press and its disastrous effects on the minds of boys at school as well as the ignorant public. The legislation undertaken to-day has not come a day too soon. Whatever enthusiasts who preach the inviolable freedom of the Press may say to the contrary, I feel perfectly convinced that in the present state of India it is absolutely necessary in the interests of good Government and the education of the rising generation to curb the unrestrained license of an irresponsible and scurrilous Press.

MR. V. N. NARASIMHIENGAR :—I have only to say a few words in order to supplement what has been stated already.

I have been a close student of the rise and the growth of the Native Press,—of the Indian Press, I should say—and my own inspirations and ideas of free journalism have been derived from the best traditions of the English Press. I remember what has been said by men like John Bright, Macaulay and other great writers and thinkers, and I should have under other circumstances viewed with suspicion any attempt, any measure, to curb the normal freedom of free journalism. But recent events have greatly disillusioned me. Instead of being a free Press, a certain section of our Indian Press has become an unlicensed Press, and journalism has been travestied by being prostituted for the purpose of blackmailing murdering the reputation of men rendering their honest services to the cou also for violating the vicinity of the *sacro-sanct* Throne and its illus It has been my shame-faced experience of the last three years ticles at which I have not ceased to blush. In Mysore, espec facts have been shown to me in the course of this morning whic restrictions proposed to be imposed on the Press in Mysore.

I have been a student of the veranacular papers a the vernacular papers which have been indulging in scarrilous writings, not only Kannada but also in Tamil, in which things which ought not to be said by any level headed man were said. I have been reading most of these papers and therefor I have no hesitation in saying that the time has come to put certain restrictions upon the unlicensed exercise of this sort of journalism. With its double-edged weapon it is capable of doing infinite good. As Mr. Bhabha h st now said, when it is ill-directed, it is capable of causing not only incalcul m at present, but in the future also, by distorting the views of the risin .

With regard to the provisio Bill itself, it has been said that, like other breaches of law, the breaches journalism ought to be inquired into and disposed of by judicial tribunal person is found guilty he should be punished judicially, and so on. the present measure rightly aims at treating this as a sort of political providing for the banishment of the offender out of the country. T nishment is not unknown to the history of Mysore. Within th , there have been offenders sent out of the limits of the country. ever be an asylum to the imbeciles and undesirables of other plac

Another thing is this : e who conduct these papers generally ? There is a Sanskrit pro ner *bhâgavato bhavanti*," which means that people who fail in o life become *bhâgavatas*. We have school- masters haunting the pial now very little themselves, pretending to teach others and the rising ge boot. Taking the qualifications, literary and psychological, of some of the constituted teachers of public opinion—the editors—what wonder is there that the Indian Press is generally looked down upon ?

I have also come across instances in which the conductors of such papers have tried to blackmail men highly placed, not only men occupying high positions but also those that command wealth. The Press has been very often prostituted for this base purpose.

Although I have been hesitating before, I now think that the time has arrived for such a measure, and I therefore heartily second it.

RAJAMANTRAPRAVINA MR. SRINIVASA IYENGAR:—Mr. President,—With your kind permission, I beg to say a few words in support of the measure now before the Council. The law as it stands at present does not enable Government to deal with newspapers which degenerate from liberty to license. The measure before us will not affect in any way, an , properly and decently conducted journal or newspaper. It will only affect newspap rs which, instead of vindicating their existence, systematically abuse their oppor unities. Such a measure has been abundantly shown to be imperatively necessar . We have the assurance of the Government that the machinery of this law wi not be put in motion except in very exceptional cases and when there is serious provocation; that is, in cases which present a most serious aspect. That being so, I have no hesitation in saying that this is a salutary measure and ought to meet with the approval of all right-thinking men.

I accordingly support the Bill.

THE DEWAN:—Gentlemen,—Before I put the Bill formally to the vote, I wish to say a few words on this measure. In the first place it is a source of sincere gratification to His Highness' Government that the Bill has received the support of both the official and the non-official members of this Council. In view of the growing evil of irresponsible journalism the Government of His Highness the Maharaja had at one stage thought of ta[illegible] on against certain offending newspapers by issuing
a summary order for t[illegible] on as was once done in 1894. But on further
consideration, the Go[illegible] d that it would be better to take power under a
legislative enactm[illegible] ne publication of newspapers. They felt sure
that the abuse o[illegible] Press had gone to such lengths and had become

more respectable newspapers in India, [illegible]
Newspapers written in English or in the [illegible]:—

"But there is another portion of the Press, written in E[illegible]
cular, which is in the hands of imperfectly educated men and

to keep itself going by things sensational. The most sensational of all things in writing is piquant abuse. Therefore the stock-in-trade of some journalists comes to be abuse, either of the Government or of individuals. In abusing Government several of them are careful to avoid, somehow or other, being involved in a charge of sedition. Others have not that degree of prudence or effrontery. But all of this particular class of journalists give themselves the utmost freedom in abusing individuals that are disagreeable to them. Their motive is personal grudge, and their abuse is personal abuse. They indulge in statements most of which are lies. . . . . Their great satisfaction is that they can sit in judgment over all the world and can abuse men under the safe cover of an anonymous 'we'."

It might have been hoped that with time an improvement would have taken place in the tone of local journalism, but instead of appreciating the freedom which they have enjoyed, the newspapers in Mysore of the type I am referring to, emboldened by immunity, have embarked on a career of systematic vilification of Government and its officers and of poisoning the minds of the people with untruths and perversions of facts. Their recklessness and perversity have gone so far that they even decline to accept corrections of misstatements when offered by the Government. This is a fact that I can vouch for from personal knowledge, and I may say also that the editor of one of these newspapers even declined—in a manner anything but courteous—an invitation from the Dewan himself to see him personally with a view to the editor being furnished with correct information.

This spirit of lawlessness is one which no responsible Government can countenance. What these newspapers would appear to claim is absolute freedom from all restraint. Such is the terror inspired by them that Government officials both at head-quarters and in the Districts will do anything to secure immunity from abuse in the papers or to be in the good graces of the editors. The different professions have their own customary codes which guide and [illegible] the actions of those that follow them. But journalism is still foreign to [illegible]ndia, and in the hands of half-educated and undisciplined men, it may [illegible]o society as is actually happening before our eyes. I daresay yo[illegible] the excerpts from the newspapers which have been placed at you[illegible] will have given you a [illegible]ear idea of the extent [illegible] that is being [illegible]nds of the journal[illegible], a kind of [illegible] is being impose[illegible]lacing the [illegible]ly out in the [illegible]know that [illegible]wspapers ha[illegible]ality they are [illegible]ntain[illegible] [illegible] Nagappa, [illegible] [illegible]on of facts, [illegible] [illegible]tives of Government [illegible]ral mind. I have [illegible]emoter Districts [illegible]e central Government [illegible]nt and their intentions, [illegible]is disillusionment is of [illegible]gain come under the [illegible] that the legislation [illegible]urrent e[illegible] [illegible]pers for l[illegible] sedition? The answer [illegible]erned a[illegible]sirable notoriety, and [illegible]e would [illegible] repeated. The evils [illegible] two—fi[illegible] abuse of His High[illegible]or, I[illegible] [illegible]mine [illegible]yalty of the people to, [illegible]ead and[illegible], attacks on the British Government [illegible]e are [illegible]ople of Mysore against the Paramount [illegible] all aut[illegible]he same new spirit, namely a spirit of [illegible]portanc[illegible]nt the spread of such a spirit is as [illegible] solidarit[illegible] as it is to the British Government. [illegible] officers of [illegible]ign ess' Government, the conduct of these [illegible] ted as almost a matter of indifference, but when it was [illegible]ncy to malign Government and undermine His Highness'

authority was spreading, and that the newspapers began to indulge in hostile criticism of the acts of the British Government as well, it was felt that the evil had assumed serious proportions which could no longer be disregarded. In view of what is going on in other parts of India under direct British Rule we should be wanting in our duty to the Paramount Powèr if we added to its troubles by allowing the newspapers published in the State to indulge in misrepresenting its actions and its motives. It may be urged that these newspapers are not really hostile to Government and only want Swadeshism and amelioration of the condition of the people, and considering that Mysore enjoys practically Swaraj under the protection and with the sympathy of the British Government, it is indeed difficult to believe that they are really animated by a feeling of active hostility either to the Mysore Government or to the Paramount Power, and in writing as they do about the movements going on in British India, I prefer to think that they are only imitating the journalistic practice outside Mysore. How else are we to explain what was told me the other day that a number of schoolboys led by their masters held a Sivaji celebration in the Mysore City? What can this be but pure mimicry without giving a thought as to the meaning of the act or its propriety in a Native State ruled by their own Maharaja, who is representative of an ancient dynasty which is justly held in the greatest reverence and affection? I have again been told that at a meeting in Mysore some months ago, a gentleman connected with one of the schools had given expression to the idea that people would be justified in getting rid by violent means of rulers and Government officials who tyrannised over the people. I do not remember in what connection or in regard to whom this amiable sentiment was uttered, but you can understand how utterly out of place it was in Mysore, the Ruler of which had only recently remitted taxation to the extent of some lakhs of rupees, had given the people the benefits of free education, had organised a costly department of Sanitation in the State, had taken the first steps towards the separation of Judicial and Executive functions, and effected many other improvements for which we have been agitating all these years.

But whether as the outcome of open hostility or meanness or ignorance is the same, and there can be no question as to the duty of the Government to see that this spirit of [illegible] the best way of attaining this end is to warn fair and [illegible] of the consequences of overstepping the bounds of will be [illegible] because we have a law like this that [illegible] This kind of [illegible] The presence of an enactment of as observed by Mr [illegible] to an educative effect. It will, calling and of the [illegible] of the high nature of their wards society. [illegible] United Government will so- to manufacturing [illegible] upon newspapers given by it. His Highness will be left untouched opinion. They have [illegible] the full light of public opinion. This has [illegible] sion of genuine public will be their policy [illegible] I assure you that this

The motion was [illegible] ously.

The Council was [illegible]

No. R. 672—*Agri., dated* 30*th July* 1908.

The accompanying extract giving a short sketch of the history of the lac industry, taken from the Report of the Maritime Trade of Bengal for 1907-08, is published for general information.

By Order,
K. S. CHANDRASEKHARA AIYAR,
Secy. to Govt. Gen & Rev. Depts.

"In view of the increasing importance of the lac industry and the expansion in the last few years of the export trade which is practically a monopoly of Calcutta, a short sketch of the history of the industry may be of interest.

Origin of Lac:—Lac is a resinous incrustation produced by [illegible]nall scale insect upon the twigs of certain trees, and is found in many parts of the Indian [illegible]tinent. The lac originates as an excretion which accumulates round and encloses the insect[illegible]neath a shell-like covering. As the insects live and feed closely packed together, the [illegible]n coalesces and results in the formation of a continuous incrustation on the twigs. [illegible]days before the swarming of the young larvæ, which takes place twice in the y[illegible]e, the twigs are broken off and collected, and from the article of commerce known[illegible]c". To provide for future crops a portion of the "Stick" is set aside, and [illegible]in grass, and subsequently bound on to fresh branches of unaffected trees [illegible]for propogation.

Manufacture of Shellac, Button lac and G[illegible]—The Stick-lac is sent to the factories where it is converted into Shellac. It is [illegible]s note to describe the process of manufacture at length, but it is briefly [illegible]-lac is crushed in mills, and the substance obtained is softened and sepa[illegible]ses consisting of (i) fragments of twigs which are used as fuel; (ii) fine d[illegible]icles of lac and dirt, technically called *Khud*; this is sold to the makers [illegible]s; (iii) granular lac, known by the trade name of Seed-lac.

The Seed-lac is soaked in water f[illegible]urs, the lac cells are broken up and the Seed-lac is reduced to a smalle[illegible]on. During this process the water becomes of a deep purple claret [illegible]bstance known as lac-dye. After being washed, the Seed-lac is [illegible]ht and air, whereby it [illegible]e ex[illegible] with orpiment (yellow arsenic) or with resin, or with both pale straw colour; it is used in th[illegible] and imparts to it a grades in which paleness is not re[illegible] or point and use in certain quantities is a nece[illegible]ed to adulter- ate Shellac unduly. Two to five per cent [illegible]. America[illegible] buyers have complained that the adultera[illegible]rly twenty- five per cent.

The S[illegible]-lac, mixed with the [illegible]arrow clot[illegible] bags which are held over open [illegible]d [illegible]eezed out of the bags upon the floor, and [illegible]he [illegible]s qualities of Shella[illegible]sified [illegible]ding to the trade as "Fine Orange O.C." "[illegible] [illegible]" of Seed-lac of a pale colour" are made [illegible] dark-red sheets known as Garnet[illegible] the melting bags tw[illegible] qualities of [illegible]y used in the pro[illegible] [illegible]n of sea[illegible]

Up-to-date [illegible]ch the same pro- cess as the Nati[illegible] facto[illegible]dity and magni- tude of production.

[illegible]nical comp[illegible]

Wax 6 per cent	extract 2·5.
Gluten 5·5 per cent	Wax 4.
Extraneous substances 6	Gluten 2.
Loss 4 per cent	

History of Lac.—The ind[illegible]inor industries of Indi[illegible] and is said to have an antiqui[illegible]ivation and collection lac was, and is still, almost en[illegible]ae races dwelling in the poo[illegible]er parts of the country, and the [illegible]agation a[illegible]onnection have remained u[illegible]changed for centuries. These metho[illegible]ed the Indian demand for the article, and un[illegible] recent years the demand of the export trade also. In fact until comparatively recently th[illegible] was little foreign demand for lac-resin, as its properties were not fully appreciated. At t[illegible] beginning of the 19th century the exports of lac-dye were five or six times more valua[illegible] than those of the resin. Between 1868 and 1900 the value of the exports of lac-dye fell fr[illegible]

Rs. 4,45,612 to nil, while that of the Shellac exported rose from Rs. 18,41,491 to Rs. 92,65,60. Lac-dye is now a waste product, and it is hoped in future to avoid in whole or in part the troublesome necessity of extracting it by postponing the season of collecting the Stick-lac until after the swarming of the young lac larvae, to whose presence in the lac cells much of the colouring matter is due. Lac dye has been robbed of its commercial value by the introduction of synthetic dyes.

Sources of supply.—The lac insect is widely distributed throughout the continent of India and Burma, and exists upon some 87 varieties of trees, of which the most important are (*i*) *Sclheichera trijuga*, (*ii*) *Butea frondosa*, (*iii*) *Ficus Bengalensis*, (*iv*) *Ficus religiosa*, (*v*) *Ficus Rumphii*, (*vi*) *Cajanus indicus*, (*vii*) *Zizyphus Jujuba*. Numbers (i) and (ii) yield the finest lac and European factories make use solely of their products, which are known as *Nagali* and *Baisakhi* (*or Katki*) respectively. The industry is especially flourishing in the Central Provinces, and in the Native Sta of Rewa and Nagod in Central India; while in parts of Bengal and in Upper Burma it ha tained considerable dimensions. It is carried on upon a small scale in Bombay, the Pun the United Provinces and parts of Madras and Mysore. In Rewa a revenue of over 5 s was obtained by the State from the industry in 1905-06.

Uses of Lac.—In India ers very largely into the agricultural, commercial, artistic, manufacturing and domest ons of the people. In the village it is used either as a varnish or a colour medium duction of tables, bed posts, chairs, boxes, platters, etc. Silver and copper-smiths, nd carriage manufacturers employ it in their trades. It is used in the painted po Bengal, Lucknow and Oudh generally, and in the Punjab, and by jewellers a s throughout India. It is extensively used by book-binders and makers of for colouring toys and fans; while marbles, pens, sealing-wax, ink-bottle d fruits are made out of it. Its use in the form of a spirit varnish i manufacturers of certain classes of articles such as carriages and is it is imported from Europe, India not yet having begun to make g to the want of cheap industrial alcohol.

In Europe and America it arnish particularly as a spirit varnish a polish for furniture and metal, a l for hats, as an ingredient in lithographic ink and as sealing wax. Th of varnish and lacquer in the manufacture of motors, bedsteads ecords and as an insulating medium in electrical appliances, has xceeding the supply of shellac, with the result that prices have d much of India's commercial lac is exported either in its its manufacture.

Prospects of the nticipate a great expansion of the industry. The u n to be restricted, and it is threatened by no rival hich was announced some years Germ There further immense scope for the development sect has had to contend so far with many enemies, fungi, climatic influences, forest fires and man. Uns rming of the young larvæ from a hail are ex ive methods of colle among the d by the great d and high prices now pr g, Much of the w due to preventable causes. years oted a able attention to the ind nt ng impro ove methods of cultivatio enjoys a of the raw article significant quality an inferior kin

Factories.— ries employing more than 50 pe s employing total average nu factories, employing an average numbe inces).

COMMERCIAL EXHIBIT ...

Simla, the 16t ...

The following ... ibition to be held at Liverpool
... 1908 are published for general inform ... ent of India will not participate
... the Exhibition.

The next Colonial Products Exh ... George Hall, [illegible]
from D ...

The publication of this Pros ... to offer a *resume* of
... Products Exhibition,
... cess obtained by it
... accompanying it, to
... d still further
... improved and

and by giving a recapitulation *
point out the amount of encoura ... nt th ...
with the task of demonstrating the imme ...
extended trade relations with her Colonie ...

Judging from the cordial supp ... enth ... m aroused by,
the last four Exhibitions—the first ... ganise ... Great Britain
outside the Metropolis—it is a reas ... on a still more
extended scale, offering a ... Colonial products, will
achieve a still larger meas ... nce of a greater amount
of commercial reciprocit ... y. It might be said,
en passant, that on all s ... through the Liver-
... Products ... R. H. the Prince of
Wales recognis ...

The resources of ... , increase rapidly
as the time goes on, a ... Empire in a better
position to help to the ... every citizen to see
realised—the establish ... pporting basis, in-
dependent of supplies ... the aid of ...
people and by that aid ...

That this end can ... oviding there be una-
nimity [illegible] ... olonies and ourselves;
and it is difficult to disc ... and effective
than endeavouring, as far ... untry ... opportunities of
realising by personal insp ... onies, as illustrated by
the number and extent of t ... o supply us.

With this object in vie ... Products Exhibition from
December 7 to December 1 ... n its scope than the last,
and for this purpose every e ... or ... from each separate Colony
samples of each and every produ ... pply.

With many months available ... ganisation, preparation, and communication with the
various Colonial authorities, whose co ... operation may be safely reckoned on, the President, and
Managers entertain sanguine hopes o ... producing a collection of Colonial Products which for
extent and diversity, has never befor ... been gathered together in one place on any previous
occasion. Sir Alfred L. Jones, K.C.M ... , will again act as President.

* Not printed.

Those Colonies ... of obtaining space in this forthcoming important Exhibition should send in their ... ion as soon as possible to the Joint Managers at 14, Dale Street, or 21, Water Street, Live... where a Plan of the Hall can be seen and all information obtained.

RULES AND REGULATIONS.

1. The Exhibition ... ll be open each day from 12 o'clock noon to 10 P.M., and will be confined to ... Exhibition of Colonial Products, Machinery, Exports, Imports, etc.

2. The Manager... serve the right to decline any application, and no application will be entertained ... less made on the proper form. The space will be allotted in the order in w... application is made.

3. In the event of ... applications being greater than the available space will accommodation, the ... agers reserve the right of curtailing any Exhibit.

4. The charge for ... re:—For stalls, 7 feet frontage by 6 feet, 3/6 per square foot. Office ... e building free. Special positions by arrangement. 50 per cent of ... able 7 days after allotment of space, the balance on ... for A...

5. Exhibitors takin... bition must fit up same at their own expense. By special ar... l Corporation, machinery in motion will be allowed in ... done to the satisfaction of the City Surveyor ... Exhibitors will not be allowed to sub-let the ... ace allotted to them.

6. No office shall be ere... the Hall other than that specially allotted for the purpose by ...

7. A Catalogue of ... d, mainly compiled from the information given by ...

... subject to the approval of those disapproved of. No Exhibitor ... how Boards in such a manner as to ... ry to light, or otherwise disadvan- ... other E... bitors.

8. Only paper... nts relating to goods of the Exhibitor are allowed ... ited at his own stand, and no pamphlets ... any other part of the building.

9. ... Hall, but all goods must be received ... the west side of the Hall, and carried ... own staff at their own cost to ... d remove their fittings, and ..., do whatever may ... epted as a last resource ... tands.

*Excess of 9 cents, reported for 31st week, has been deducted now.

Note.—Rice (husked)—Oryza Sativa.
Ragi—Eleusine Corocana.
Kulthi—(Horse gram) Dolichos Biflorus.
Cholum—Sorghum Vulgare
Kadale—(Bengal gram) Ciser Arietinum.

DISTRICT REPORTS.

8. Markets how supplied.

9. Progress of agricultural operations, state of standing crops, prospects and probable outturn of harvests, serious damage done to crops by insects or other natural calamities.

10. Prospects of season, tracts in which the rainfall has been insufficient, areas affected by scarcity, number of people under relief, and state of food stocks.

11. Public health.

12. Remarks as to the condition of agricultural stock, failure of pasturage of fodder, etc.

BANGALORE CIVIL AND MILITARY STATION.

	Average for the past five years of the corresponding week.	*Current*	
Prices of food grains – Rice ...	7¼	5¾ to 6	seers per rupee.
Ragi ...	19½	12 to 13	

Agricultural operations.—Weeding in ragi fields.

State of standing crops:—Fair.

Cattle are in good condition. Water and fodder sufficient.

BANGALORE CITY AND TALUKS.

8. Market well supplied.

9. *Agricultural operations.*—Raiyats are engaged all over the district in harrowing fields. And weeding has also been commenced in the Kankanhalli Taluk.

Standing crops, viz., paddy, sugar-cane, mulberry, gingelly, togari, etc., are reported to be in good condition. But rain is wanted throughout the district.

10. There is sufficient stock of food grains in the local markets, but their prices are reported to be as high as before.

11. Public health generally good, but a few stray cases of plague are reported to have occurred in the Anekal, Kankanhalli and Dodballapur Taluks.

12. Cattle are reported to be healthy, except in the Dodballapur and Kankanhalli Taluks, where "Dod Roga" is reported to be still existing. Drinking water and fodder are reported to be available in sufficient quantities.

KOLAR.

8. Market well supplied.

9. *Agricultural operations.*—Dry lands are being ploughed throughout the district for sowing ragi, avare, horse gram and togari.

Crops sown.—Togari in Bowringpet, Sidlaghatta and Malur; same in Chintamani and Srinivaspur, paddy in Bowringpet and Chintamani; horse gram and haraka in Chikballapur and Srinivaspur; and ragi and avare in almost all the taluks of the district.

10. Prospects of the season fair, but rain is very badly needed throughout the district. Food stuffs are available; but their prices continue to be rather high.

11. Except for plague in a few villages of the Malur and Sidlaghatta Taluks and small-pox in parts of Gudibanda, public health generally good.

12. It is reported that "Rinderpest" prevails in almost all the taluks of the district and "Sappe Jadya" in Gudibanda. Water and fodder available.

TUMKUR.

8. Market well supplied.

9. *Standing crops* are reported to be in moderately good condition in all the taluks, except Sira, Tiptur, Kunigal and Turuvekere, where they are reported to be withering for want of rain. In Angadigere, Kanathur and Doddamaragonahalli of the Turuvekere Sub-Taluk, ragi and avare crops are reported to be affected with the diseases known locally as "Barpe" and "Salabe Hula."

Crops sown.—Ragi, avare and togari in Maddagiri, Sira, Gubbi, Koratagere and Turuvekere; paddy in Tumkur and Gubbi; horse gram in Tumkur and Chiknayakanhalli, Gubbi, Pavagada and Koratagere; cholum in Chiknayakanhalli, Sira and Koratagere; ragi in Tumkur and Tiptur; and cotton in Pavagada.

Crops harvested.—Sugar-cane in Gubbi, Tumkur and Kunigal; cholum in Sira, Gubbi and Turuvekere; and nati ragi in Sira; paddy in Gubbi and Turuvekere; til in Tiptur and Turuvekere; and black gram in Tiptur.

10. Prospects of the season fair, but rain is badly needed in Sira, Tiptur, Kunigal and Turuvekere. Food stuffs available.

11. Except for plague in Chelur, Gubbi Taluk, public health generally good.

12. Cattle in parts of the Tumkur, Maddagiri and Chiknayakanhalli Taluks are reported to be suffering from "Dod Roga" and from "Chappe Roga" in the Gubbi Taluk. Fodder and water are getting scarce. Date leaves are also being used as fodder in parts of the Sira and Tiptur Taluks.

MYSORE.

8. Market well supplied.

9. *Agricultural operations.*—Lands in parts of the Malvalli Taluk are being ploughed. Paddy is being transplanted in parts of the Mysore, Seringapatam, Yedatore, Gundlupet, Nanjangud and T.-Narsipur Taluks.

Standing crops are reported to be in moderately good condition in all the taluks, except parts of the Mandya Taluk, where ragi is reported to be withering for want of rain. Cholum in parts of the Nagamangala Taluk is reported to have greatly suffered for want of rain.

Crops sown.—Ragi in parts of the Gundlupet and Mandya Taluks; horse-gram in parts of the Hunsur Taluk; and samé in parts of the Gundlupet Taluk.

Crops harvested.—Cholum in parts of the Mysore, Nanjangud and T.-Narsipur Taluks; til in parts of the Mysore, Gundlupet, Nanjangud, T.-Narsipur, Malvalli and Krishnarajpete Taluks; and kar ragi in parts of the Nanjangud Taluk.

10. Prospects of the season generally good. But standing crops in parts of the Chamrajnagar, Malvalli and Nagamangala Taluks are reported to be in need of rain. Raiyats and merchants have sufficient stock of food grains for the present.

11. Except for plague in a few places in the district, public health generally good.

12. Cattle in parts of the Mysore, Chamrajnagar and Gundlupet Taluks are reported to be suffering from "Dod Roga." They are reported to be healthy in other parts. Water and fodder available throughout the district.

HASSAN.

8. Market well supplied.

9. *Agricultural operations.*—Paddy in the Hassan, Manjarabad and Belur Taluks are being transplanted.

Standing crops.—Ragi, paddy, sugar-cane and togari in the Hassan and Arkalgud Taluks; paddy and ragi in the Belur and Manjarabad Taluks; sugar-cane, paddy, ragi, cholum and castor in the Channarayapatna and Hole-Narsipur Taluks; and ragi, paddy and sugar-cane in the Alur Sub-Taluk—all these are reported to be in good condition.

Crops sown.—Ragi, paddy and horse-gram in the Channarayapatna Taluk; and avare in the Alur Sub-Taluk are being sown.

Crops harvested.—Gingelly and sugar-cane are being harvested in the Channarayapatna Taluk.

10. Prospects of the season generally good. More rain is required for crops in the Arsikere Taluk.

11. Except for plague in parts of the Hassan Taluk, public health generally good.

12. Cattle are generally in good condition. "Dod Roga" is reported to exist in parts of the Manjarabad Taluk and in Belur Kasaba. Water and fodder available except in parts of the Arsikere Taluk, where date leaves are being used as fodder for cattle.

SHIMOGA.

8. Market well supplied.

9. *Agricultural operations.*—Paddy seedlings are being transplanted in the Sagar and Tirthahalli Taluks.

Standing crops, viz., paddy, ragi, cholum, sugar-cane, avare, togari, gingelly and green gram are in good condition in all the taluks of the district. Arecanut crop is attacked with "Kole Roga" (Rot) in portions of the Sagar and Tirthahalli Taluks.

Crops sown.—Ragi is being sown in portions of the Shimoga and Honnali Taluks and navane and horse gram in the Honnali Taluk.

10. Prospects of the season generally good. Food stuffs are available, but their prices continue to be high, as large quantities of them are being exported.

11. Public health generally good. Plague continues still in Shimoga town and in a few of its neighbouring villages.

12. Cattle generally healthy, except in portions of the Honnali Taluk, where murrain prevails. Water and fodder available.

KADUR.

8. Market well supplied.

9. *Agricultural operations.*—Transplanting of paddy in Chikmagalur, Koppa, Mudgere, Yedahalli and Sringeri.

Standing crops.—

In Chikmagalur—Paddy, sugar-cane, ragi, avare, gingelly, castor, cholum, coriander, black gram, green gram, togari, onion, garlic and coffee.

In Kadur—Paddy, ragi, sugar-cane, cholum, avare, black gram, green gram, gingelly and navane.

In Tarikere—Paddy, ragi, cholum, sugar-cane, gingelly, black gram, green gram, avare and togari.

In Koppa—Paddy, sugar-cane, pepper, cardamom and coffee.

In Yedahalli—Paddy, sugar-cane and coffee.

In Mudgere—Paddy and ragi.

In Sringeri—Paddy.

All the above are reported to be in good condition. But "Areca" crop in Koppa, Yedahalli and Sringeri is reported to have been affected with "Kole Roga." (Rot.)

Crop harvested and its yield.—Kadur, sugar-cane, yield 8 annas.

10. Prospects of the season good. Food stuffs sufficient. More rain is needed in parts of the Kadur Taluk.

11. Public health generally good.

12. Cattle generally healthy. But "Dod Roga" is still prevailing in parts of the district. Water and fodder available.

CHITALDRUG.

8. Market well supplied.

9. *Standing crops*, such as, ragi, paddy, avare, black gram, green gram, horse gram, haraka, samè, navane, sesamum, chillies, castor and cholum, are reported to be in good condition.

Crops sown.—Ragi and cholum in the Challakere and Molakalmuru Taluks; ragi in the Holalkere, Hiriyur and Davangere Taluks; cholum in the Jagalur Taluk; chillies in the Hiriyur Taluk; navane, horse gram and cotton in the Davangere, Challakere and Jagalur Taluks; sajje in the Challakere and Jagalur Taluks; navane and castor in the Challakere Taluk; and wheat, cotton, navane, and ragi in the Chitaldrug Taluk.

Crops harvested.—Nil.

10. Prospects of the season fair. More rain is badly required in the Hiriyur, Challakere and Molakalmuru Taluks. Food stuffs available.

11. Public health generally good.

12. Cattle healthy, except in parts of the Holalkere Taluk, where "Rinderpest" prevails. Water and fodder available. But for insufficiency of fodder in the Challakere Taluk and in a few villages of the Molakalmuru Taluk, cattle are being fed on date and kamara leaves.

THE MYSORE DASARA INDUSTRIAL AND AGRICULTURAL EXHIBITION OF 1908.

PLOUGHING COMPETITION.

In the prize list published with the prospectus, a sum of rupees fifty has been allotted for the ploughing competition. The following particulars regarding the award of prizes are published for information :—

Indigenous as well as local and imported implements of all kinds will be admitted, the different classes of implements being allowed to compete separately.

1. *Ploughing.*—Each competitor will be required to plough completely one plot of red loamy soil measuring three guntas in an hour and a half.

2. *Ridging.*—To ridge up completely a three-gunta plot in an hour and a half.

3. *Harrowing.*—A four-gunta plot will have to be harrowed in twenty minutes.

4. *Sowing.*—A four-gunta plot to be sown in twenty minutes with a seed-drill.

5(*a*) *Thrashing.*—A given quantity of a given kind of crop to be thrashed by cattle, stone mills, or power machines.

(*b*) *Winnowing.*—By machines of different kinds.

The number and value of prizes to be awarded will be fixed after applications for the entries are received and the various kinds of implements and machinery competing are known, and the present provision of rupees fifty will be increased in proportion. The competition will be held between the 7th and 14th October, and the details regarding the days and hours of the competition and the prizes will be intimated to the applicants on or about the 25th September.

Those who wish to enter for these competitions are requested to submit their applications in the accompanying form through the $\frac{\text{Amildar}}{\text{Tahsildar}}$ of their taluk so as to reach the undersigned not later than the 15th September 1908, at Mysore.

K. SUBBA RAO,
Secretary.

APPLICATION FORM.

Name and address of the competitor	Name, kind and value of the Agricultural implements which the competitor proposes to enter for the competition	Events for which the applicant wishes to compete	Remarks of the Amildar or Tahsildar of the Taluk

N.B.—All the Agricultural implements should be produced for the inspection of the Secretary to the Exhibition Committee at Mysore, on or before 30th September, 1908.

DISTRICT REPORTS.

8. Markets how supplied.

9. Progress of agricultural operations, state of standing crops, prospects and probable outturn of harvests, serious damage done to crops by insects or other natural calamities

10. Prospects of season, tracts in which the rainfall has been insufficient, areas affected by scarcity, number of people under relief, and state of food stocks.

11. Public health.

12. Remarks as to the condition of agricultural stock, failure of pasturage of fodder, etc.

BANGALORE CIVIL AND MILITARY STATION.

	Average for the past five years of the corresponding week.	*Current.*	
Prices of food grains—Rice ...	7¼	5¾ to 6	seers per rupee.
Ragi ...	19½	12 to 13	

Agricultural operations.—Weeding in ragi fields.

State of standing crops.—Want of rain is felt.

Cattle are in good condition. Water and fodder sufficient.

BANGALORE CITY AND TALUKS.

8. Market well supplied.

9. *Agricultural operations.*—All over the district, raiyats are engaged in harrowing their fields. The weeding process is also in operation.

Standing crops, viz., sugar-cane, mulberry, gingelly, haraka and castor are reported to be in good condition. But rain is very badly wanted in all the taluks.

10. There is sufficient stock of food grains in the markets, but their prices continue to be stationary and as high as before.

11. Except that a few cases of plague are reported to have occurred in certain villages of the Hoskote, Dodballapur and Anekal Taluks, public health generally good.

12. Cattle are reported to be healthy all over the district, except the Kankanhalli Taluk, where "Dod Roga" is reported to be still existing. Drinking water and fodder are reported to be available in sufficient quantities.

KOLAR.

8. Market well supplied.

9. *Standing crops,* are reported to be in great need of rain. Ragi crop in the Bowringpet and Goribidnur Taluks are reported to be affected with the disease locally known as "Kambli Roga."

Crops sown.—Ragi and avare in Bowringpet and Srinivaspur, ragi in Bagepalli and Gudibanda; horse-gram in Sidlaghatta, Chikballapur, Malur and Gudibanda; samé in Chikballapur and Srinivaspur; and togari and paddy in Bowringpet.

Crop harvested.—Maize in Bowringpet.

10. Prospects of the season fair, but rain is very badly needed throughout the district. Prices continue to be very high.

11. Except for plague in a few villages of the Malur and Sidlaghatta Taluks and fever in parts of Gudibanda, public health generally good.

12. It is reported that "Rinderpest" prevails in almost all the taluks of the district. Water and fodder available.

TUMKUR.

8. Market well supplied.

9. *Standing crops* are reported to be in moderately good condition in all the taluks, except Maddagiri, Sira, Tiptur, Kunigal and Turuvekere. In some villages of the Turuvekere Sub-Taluk, ragi is reported to be affected with the disease locally known as "Barpe Hula."

Crops sown.—Ragi, avare and togari in Tiptur, Koratagere and Turuvekere; ragi and paddy in Tumkur and Gubbi; and horse-gram in Tumkur, Chiknayakanhalli, and Koratagere.

Crops harvested.—Sugar-cane in Tumkur, Gubbi, Kunigal and Turuvekere; nati ragi in Sira; cholum in Tiptur and Turuvekere; til in Gubbi, Tiptur and Turuvekere; black gram in Tiptur; and paddy in Kunigal.

10. Prospects of the season fair, but rain is badly needed in Maddagiri, Sira, Kunigal and Turuvekere. Food stuffs available.

11. Public health generally good.

12. Cattle in parts of the Tumkur, Maddagiri and Chiknayakanhalli Taluks are reported to be suffering from "Dod Roga." Water and fodder are getting scarce. Date leaves are also being used as fodder in the Sira and Tiptur Taluks.

MYSORE.

8. Market well supplied.

9. *Agricultural operations.*—Paddy is being transplanted in parts of the Seringapatam Yedatore, Nanjangud, Malvalli and Nagamangala Taluks.

Standing crops are reported to be in moderately good condition in all the taluks, except in parts of the Malavalli Taluk, where they are reported to be withering for want of rain. Standing dry crops in parts of the Nagamangala Taluk are reported to have almost failed for want of rain.

Crops sown.—Ragi in parts of the Chamarajnagar, Gundlupet, Nanjangud and Mandya Taluks; and savé in parts of the Gundlupet Taluk.

Crops harvested.—Ragi in parts of the Heggaddevankote and Nanjangud Taluks; til in parts of the Mysore, Seringapatam, Gundlupet, Nanjangud and T.-Narsipur Taluks; and cholum in parts of the Mysore, Nanjangud and T.-Narsipur Taluks. Sugar-cane is being milled in parts of the Nagamangala Taluk.

10. Prospects of the season generally good. But standing crops in parts of the Chamrajnagar, Hunsur, Nanjangud, Mandya, Krishnarajpete and Malvalli Taluks are reported to be in need of rain. Raiyats and merchants have sufficient stock of food grains for the present.

11. Except for plague in a few places in the district, public health generally good.

12. Cattle in parts of the Mysore, Chamrajnagar, Heggaddevankote, Gundlupet and Nanjangud Taluks are reported to be suffering from "Dod Roga." Water and fodder available throughout the district.

HASSAN.

8. Market well supplied.

9. *Agricultural operations.*—Paddy in the Channarayapatna Taluk and ragi in the Arsikere Taluk are being transplanted. Avare, kulthi and black gram in the Alur Sub-Taluk are being sown.

Standing crops.—Ragi, paddy, sugar-cane, castor and togari in the Hassan, Arkalgud, and Channarayapatna Taluks; paddy and ragi in the Manjarabad and Belur Taluks; sugar-cane, paddy, ragi, avare, togari castor and chillies in the Hole-Narsipur Taluk; paddy, ragi and sugar-cane in the Alur Sub-Taluk,—all these are reported to be in good condition.

Crops harvested.—Garlic and onions in the Hassan Taluk, and gingelly and sugar-cane in the Channarayapatna Taluk, are being harvested.

10. Prospects of the season generally good. But more rain is required in the Arsikere Taluk for the withering crops

11. Except for plague in parts of the Hassan Taluk, public health generally good.

12. Cattle are generally in good condition. "Dod Roga" is reported to exist in parts of the Hassan, Manjarabad and Arsikere Taluks and also in the Alur Kasaba. Water and fodder available except in parts of the Arsikere Taluk, where date leaves are being used as fodder for cattle.

SHIMOGA.

8. Market well supplied.

9. *Agricultural operations.*—Paddy seedlings are being transplanted in the Sagar and Tirthahalli Taluks.

Standing crops, viz., paddy, ragi, cholum, avare, togari, gingelly, green gram and sugar-cane, are in good condition in all the taluks of the district. Arecanut is attacked with "Kole Roga" (Rot) in the Sagar and Tirthahalli Taluks.

Crops sown.—horse-gram is being sown in portions of the Shimoga and Honnali Taluks and the Kumsi Sub-Taluk and save, navane and cotton in the Honnali Taluk.

10. Prospects of the season generally good. Food stuffs are available in sufficient quantities but their prices continue to be high, in consequence of large exports.

11. Public health generally good. Plague continues to prevail in Shimoga town and in a few of its neighbouring villages. It is subsiding in the Kumsi Sub-Taluk.

12. Cattle generally healthy, except in portions of the Honnali, Sagar, Nagar and Tirthahalli Taluks, where murrain is prevalent. Water and fodder available.

KADUR.

8. Market well supplied.

9. *Agricultural operations.*—Transplanting of paddy in Chikmagalur, Koppa, Mudgere, Yedahalli and Sringeri.

Standing crops.—

In Chikmagalur—Paddy, sugar-cane, ragi, avare, gingelly, castor, cholum, coriander, black gram, green gram, togari, onion, garlic and coffee.

In Kadur—Paddy, ragi, sugar-cane, cholum, avare, black gram, green gram, gingelly castor, save and navane.

In Tarikere—Paddy, ragi, cholum, sugar-cane, gingelly, black gram, green gram, avare, sugar-cane and togari.

In Koppa—Paddy, sugar-cane, pepper, cardamom and coffee.

In Mudgere—Paddy, ragi and sugar-cane.

In Yedahalli—Paddy and coffee.

In Sringeri—Paddy.

All the above are reported to be in good condition. But Areca crop in Koppa, Yedahalli and Sringeri is reported to have been affected with "Kole Roga." (Rot)

Crops sown.—Sowing of horse-gram, save and navane in Kadur, and cholum, avare, togari, and khurasani in Tarikere, is going on.

Crops harvested and their yield.—Kadur, sugar-cane, yield 8 annas and gingelly, yield 4 annas.

10. Prospects of the season good. Food stuffs sufficient. More rain is needed in parts of the Kadur Taluk.

11. Public health generally good.

12. Cattle generally healthy. But "Dod Roga" is still prevailing in parts of the district. Water and fodder available.

CHITALDRUG.

8. Market well supplied.

9. *Standing crops.*—Ragi, cholum, horse-gram, avare, togari, paddy, black gram, green gram, cotton, sajje, same, navane, castor, sesamum, and green chillies, are reported to be in good condition.

Crops sown.—Navane and cotton in the Chitaldrug Taluk; Ragi in the Hiriyur, Challakere and Hosadurga Taluks; paddy (under wells) in the Challakere and Hiriyur Taluks; chillies in the Hiriyur Taluk; horse-gram in the Jagalur Taluk; same, cholum, avare, castor, togari and black gram in the Hosadurga Taluk

Crop harvested and its yield.—Gidda ragi (under wells) in the Challakere Taluk, yield from 4 to 6 annas.

10. Prospects of the season fair. But more rain is needed in parts of the Hiriyur, Molakalmuru and Challakere Taluks. Food stuffs available.

11. Public health generally good.

12. Cattle healthy, except in parts of the Holalkere and Hosadurga Taluks, where "Rinderpest" prevails. Water and fodder available. But, owing to insufficiency of fodder, cattle are being fed on date and kamara leaves in the Challakere Taluk and in a few villages of the Molakalmuru Taluk. And where date leaves are not procurable, a kind of grass known as "Sunti Beru" is used in feeding cattle in the Challakere Taluk.

BANGALORE,
26th August 1908

A. RANGASWAMI IYENGAR,
Revenue Commissioner.

THE MYSORE DASARA INDUSTRIAL AND AGRICULTURAL EXHIBITION OF 1908.

NOTIFICATION.

In connection with the above exhibition, a small FLOWER SHOW will be held on 30th September, the day on which the Exhibition commences.

General Conditions.

1. In view to arrangements being made for staging plants, exhibitors are requested to notify to the undersigned, at least four days prior to the Show, what number of pots they intend to enter and for what prize they intend to compete.

2. Plants intended for competition should be delivered in the Conservatory before 4 P.M., on the day previous to the Show.

3. Cut flowers may be delivered up till 2 P.M., on the day of the Show, but not later if intended for competition.

4. No prize shall be awarded unless there are at least two competitors for it, except in cases of rare excellence, when the Judges will use their discretion.

5. It shall also be competent for the Judges to reduce the amount of prices if in their opinion, the articles exhibited do not merit the full amount.

6. All exhibits sent for competition must be the *bonâ fide* produce of, or have been raised by, the exhibitors; and unless otherwise specified, must have been grown in the Mysore City or in its near vicinity.

NOTICE.

THE WEAVING COMPETITION.

In connection with the Exhibition of 1908, a Weaving Competition will be held in the exhibition premises, Mysore. The following rules regulating the competition are published for the information of intending competitors :—

SECTION I.

1. The competition will commence on Tuesday, 6th October, at 8 A.M. and will be continued till 5 P.M. on Thursday, 8th October.

2. Weavers will be required to work for 7 hours a day from 8 to 11 A.M. and 1 to 5 P.M.

3. Any kind of hand loom—indigenous or improved or foreign—may be entered for the competition.

4. Competitors will be allowed to fix the warps on the looms beforehand and to weave a length not exceeding two yards before the competition commences.

5. The competitors will be allowed to compete in one of the following five tests (*a* to *e*).

Test No. (*f*) is open only to boys, under 18 years of age.

(*a*) To weave *panches* (cloths) 13½ feet long, 46 inches wide, with ½ inch cotton black border, with 20's warp 48 ends per inch and 20's weft 48 picks per inch.

(*b*) To weave *panches* (cloths) 9 feet long and 46 inches wide, of border as above, with 30's warp 52 ends per inch and 20's weft 48 picks per inch.

(*c*) To weave *panches* (cloths) with ⅛ inch silk border, 10½ feet long and 54 inches wide, with 60's warp 72 ends per inch and 60's weft 72 picks per inch.

(*d*) To weave a cloth 54 inches wide with 100's warp 80 ends per inch and 100's weft with 80 picks per inch.

(*e*) Silk muslin pieces with lace border. Looms must have fly shuttle attachments. The design and quality of the silk to be at the option of the competitor.

(*f*) To weave a piece of check 32 inches wide, of the pattern to be given at the time of the competition. This must be woven on pit or frame fly shuttle looms. Reeds with 24 dents per inch to be used and yarn 30's double black and white.

N.B.—The cross borders in tests (*a*), (*b*) & (*c*) to be according to the taste of the weaver; the time taken for them will not be taken into account in judging.

6. Competitors should come provided with their own warps complying with the conditions of the competition and long enough to last them during the period of competition. They must supply their own pirns and must have a sufficient supply of the same.

7. In awarding prizes, the Judges will note the following points :—

(*a*) The work done.—i. The length of cloth woven during the whole period. ii. Uniformity of picking, giving the required number of picks per inch. iii. Freedom from broken ends. iv. Clean edges.

(*b*) The time taken for piecing up the work and getting it ready for weaving or mounting up the loom.

(*c*) Adaptability of the loom.—i. Whether the loom is suited for weaving different kinds of cloth using different counts of yarn. ii. Whether the loom can be worked profitably by weavers in their houses or is only useful for factory work.

(*d*) Mechanism of the loom.—i. Soundness and proper proportion of its parts. ii. Simplicity in mechanism so as to be capable of being easily repaired when out of order. iii. The position in which the weaver has to hold his body while working and the ease with which he can work the loom.

8. One gold medal and 3 silver medals will be awarded to the looms that are considered by the Judges to do the best kind of work. Besides these, five first prizes of Rs. 25 each and five second prizes of Rs. 15 each will be awarded to weavers that do satisfactory work in the first five tests prescribed above.

9. Three prizes in the shape of fly shuttle attachments to the pit looms will be given to the first three successful boys in test No. (*f*) prescribed above.

10. In case the pit indigenous looms do not earn any prize, a special prize of Rs. 10 will be given to the best among pit loom weavers as an encouragement to them.

SECTION II.

Weaving and preparatory process.

(1) Simple process of making long warps and sizing them economically and usefully.

(2) Simple adaptation of English Dobby for handloom work.

11. Two first prizes of Rs. 15 each and two second prizes of Rs. 10 each will be awarded to the successful competitors.

GENERAL.

12. Intending competitors must send their applications in the form appended, so as to reach the Secretary at Mysore on or before 20th September 1908.

13. Competitors will fit up their own looms in the grounds allotted from 1st October and get everything ready for competition.

(*N.B.*—To *bonâ-fide* weavers residing within the Mysore State, and entering for the competition, advances will be given if necessary, for the purchase of yarn required for the competition and be recovered by the sale of the cloth woven at the competition. Weavers requiring advances should state the amount requiredin the application form.)

Notification No. R. 1241—*Agri.* 32-08-2, *dated* 24*th August* 1908.

The following Resolution of the Government of India in the Department of Commerce and Industry, regarding the Universal and International Exhibition to be held at Brussels in the year 1910 is hereby published for general information.

By Order,
K. S. CHANDRASEKHARA AIYAR,
Secy. to Govt., Gen. & Rev. Depts.

No. 6453—6473—6.

GOVERNMENT OF INDIA.

DEPARTMENT OF COMMERCE AND INDUSTRY.

COMMERCIAL EXHIBITIONS.

Simla, the 10th July 1908.

RESOLUTION.

The following papers relative to the Universal and International Exhibition to be held at Brussels in the year 1910, are published for general information, in continuation of Resolution No. 22-42-1, dated the 6th January 1908.

BRUSSELS UNIVERSAL AND INTERNATIONAL EXHIBITION, 1910.

UNDER THE HIGH PATRONAGE OF HIS MAJESTY THE KING OF THE BELGIANS AND THE HONORARY PRESIDENCY OF H. R. H. PRINCE ALBERT OF BELGIUM WITH THE SUPPORT OF THE PUBLIC AUTHORITIES.

Appeal to Producers.

Brussels, January 24, 1908.

A Universal and International Exhibition will open at Brussels in the month of April, 1910, and will last for about six months. Its Palaces and Halls will be erected in the new quarter of the Avenue Louise skirted by the grand old beech trees of the Bois de la Cambre, the favourite resort of the Brussels people. What a delightful view indeed will the observer command from this picturesque site: he will witness in the distance the undulating country overlooked in the rear by the thick-set trees and green shrubbery of the Forest of Soignes.

From its position at the junction of the main lines of communication of Europe, and its being the Capital of one of the most densely populated and most industrial countries of the Globe, and having, for centuries past, been accumulating art treasures of all kinds, Brussels is so well known that any enlargement upon its reputation would be quite unnecessary.

Not only is the Belgian Capital the seat of a strong artistic, scientific, and commercial movement, but every possible effort is made towards improving the City and rendering it more and more attractive, while the people are always ready to welcome and extend hospitality to foreigners coming to visit Brussels.

No sooner had the scheme been announced than it secured the enlightened protection of the King and the support of Government; and the Brussels Exhibition is bound to be a great success.

The Belgian Government have acquainted the Foreign Cabinets with the organisation of this Exhibition, inviting them to take part and to be officially represented by appointing Commissioners or Committees.

Even now, important corporations are in course of formation, from all over Belgium considerable support is forthcoming and adhesions have practically been received from the large neighbouring Countries.

The Brussels Universal and International Exhibition includes, in broad lines, artistic, scientific, industrial, commercial and colonial sections. It will be open to works of art, industrial and agricultural products, and generally to all wares coming within the classification annexed to the General Regulations.

The Artistic section will consist of an International Saloon of Fine Arts.

The Scientific section will embrace with the various degrees of education the instruments and general methods connected with Letters, Sciences and Arts.

The Industrial section will be made up of all the products, methods and materials, both industrial and agricultural.

Steps will be taken to render fully complete the special groups connected with fancy trades, mines, metallurgy, machinery, electricity, arms manufacturing and mechanical locomotion.

The programme further contains special Exhibitions, temporary Agricultural and Horticultural Shows; Congresses, Conferences, Artistic and Sportive Fêtes.

The Executive Committee also propose to organise during the Exhibition popular games and competitions.

Furthermore, like at other Exhibitions, national compartments will be formed wherein the works and productions of a same country will be divided into groups and classes according to a system of general classification.

The Exhibition will cover a total area of about two hundred acres, a large portion of which will be reserved to the Foreign Sections. The installations will be connected with the Belgian State Railway, so as to bring all exhibits up to the required spot, on rail tracks laid down in the Halls and ground.

The principal Palace and the Halls of the Exhibition will be built of iron and covered with hard materials: the roofed surface amounting to at least one hundred and fifty thousand square metres.

The Machinery Gallery will include numerous workshops in operation under the eyes of the Public.

A vast park, in which attractions will scatter in all directions, will surround the buildings.

Enclosed herewith will be found the full programme of the Exhibition comprising the General Regulations, and the detailed classification of the goods.

The attention of Exhibitors is specially directed to the fact that the rent for detached space includes handling charges (Article 25 of General Regulations). Exhibitors will thus be enabled to accurately estimate beforehand the charges incumbent upon them.

According to the clauses inserted in Articles 18 and 27 of the General Regulations, *special arrangements may be concluded for the hire of large spaces as well as for the handling work and storage of empties, but solely with such countries as are officially represented.*

In that case, the charges would be fixed separately, *viz.*:

(1) For hire of space in the Halls, exclusive of expense of decoration;

(2) For handling;

(3) For storage of empties.

Any such agreements to be entered into with officially represented countries will be drawn up by the Commissioner-General of the Belgian Government.

The Government will grant on the State Railways free transport to and from, of Belgian products consigned to the Exhibition and free return in the case of foreign exhibits.

The Exhibition will be treated as an actual bonded warehouse, foreign goods intended for the Exhibition being allowed provisional duty-free importation subject to being afterwards re-exported.

The necessary measures will be taken by the Government for protecting in Belgium patentable inventions, industrial designs or models, and manufacturing or trade marks appearing at the Exhibition.

Moreover, the Belgian Government have sanctioned the organisation of a Lottery comprising several series of a million tickets each. The prizes will be purchased from the Exhibitors, or (as regards series of tickets issued prior to the opening) from such persons as shall have given a written undertaking to exhibit.

An International Jury of Awards will be instituted, to operate under the control of the Commissioner-General of the Belgian Government. The Members of the Jury will be designated by the Government of their respective countries.

The General Regulations specify the nature of the awards to be attributed to the Exhibitors; same consist of diplomas or medals.

In conclusion, the Executive Committee propose to give all kinds of fêtes, to multiply the attractions with the view of enhancing the splendour of the Exhibition and increasing the number of visitors.

The Board of Directors of the "Société Anonyme de l'Exposition de Bruxelles" is placed under the Presidency of Baron Baeyens, Governor of the Bank "Société Générale de Belgique." An Executive Committee with Mr. Emile De Mot, Senator, Burgomaster of the City of Brussels, as President, has been invested with all the powers of the Board.

The Executive Committee will determine the various measures coming within the scope of organisation and management, and are exclusively qualified to deal with all questions of receipts and expenditure.

Although an undertaking solely due to private initiative, the Brussels Exhibition has ensured the effective co-operation of the Belgian Government, and also the support of the City of Brussels and Province of Brabant. It is placed under the High Patronage of H. M. the King of the Belgians and under the Honorary Presidency of H. R. H. Prince Albert of Belgium.

The Duke d'Ursel has been invested with the functions of Government Commissioner-General to the Brussels Exhibition, and M. J. Gody has been appointed Deputy Commissioner-General.

The Exhibition is not organised with the view of profit; its promoters are anxious to make our country appreciated abroad, by displaying anew her productive power and industrial progress.

The Executive Committee therefore warmly appeal to all, convinced, as they are, that the character and object of the Exhibition will secure numerous and important adhesions.

THE EXECUTIVE COMMITTEE.

Vice-President.
Georges DUPRET,
Senator.

President.
Emile DE MOT,
Senator,
Burgomaster of the City of Brussels.

Maurice LEMONNIER,
Member of the Chamber of Representative
Alderman of the City of Brussels.

Members.

Commissioner-General of the Belgian Government at the Milan Exhibition, 1906.

Assistant Secretary.
Raoul VAN DEN BUIGKE,

Approved.
J. GODY,
Deputy Commissioner-General of the Government.

Duke d'URSEL,
Commissioner-General of the Government.

GENERAL DISPOSITIONS AND ORGANIC RULES.

CHAPTER I.

GENERAL PROVISIONS.

Object.

Art. 1.—The Exhibition will include chiefly art works (Painting, Sculpture, Engraving and Architecture), scientific works and the Industrial and Agricultural plant and productions of all nations.

It will further include military art and Colonial Exhibitions. The Executive Committee contemplate the creation of an exhibition of modern Decorative Art.

Machinery of every description will, as far as practicable, operate under the eyes of the public for the purpose of showing visitors the mode of working same and initiating them into the different lines of manufacture.

Special temporary shows and exhibits of agricultural machines in operation, live-stock, plants, flowers, fruits, vegetables, etc., are contemplated and those will be regulated by independent rules.

Location and Surface.

Art. 2.—The Exhibition will be installed in the new quarter of the Avenue Louise adjoining the Bois de la Cambre.

The Exhibition will cover more than 200 acres of ground and will be connected with the Belgian State Railway.

The Principal Palace as well as the Exhibition Halls will be built of iron and covered with hard materials, the surface occupied by the various buildings approximately reaching 150,000 square metres, made up of Halls for Industrial and Commercial products, Machinery Gallery, Railway Material and Electricity Departments, with annexes, etc.

A vast park surrounding the buildings will contain numerous attractions.

The Executive Committee have received numerous offers for the instalment of important attractions, such as the reconstituting a quarter of Old Brussels, together with its monuments, decorated and furnished houses whose occupiers will be clad in the costumes of the times, the establishment of a universal museum of fetichism, etc., etc.

Duration.

Art. 3.—The Exhibition will be inaugurated end of April 1910, and remain open for a period of at least six months, with the option for the Executive Committee to prolong it until the 15th November inclusive.

Board of Directors and Executive Committee.

Art. 4.—The Board of Directors (*) of the "Société Anonyme de l'Exposition de Bruxelles" under the Presidency of Baron Baeyens, Governor of the "Société Générale" Bank, have delegated their powers to an Executive Committee with Mr. Emile De Mot, Senator, Burgomaster of the City of Brussels, as President. This latter Committee will act as representative of the Company and deal with the various matters of Administration and Finance; it forms the executive and ruling authority in respect to the organisation and conduct of the Exhibition.

The Executive Committee have appointed two General Managers for the purpose of carrying out their resolutions.

Superior Commission of Patronage of Belgian Section.

Art. 5.—A Superior Commission of Patronage will be instituted and the duties of the Commission consist in promoting and facilitating the participation of Belgian producers.

It will be composed of Committees of groups and classes and also local Committees, such Commission and Committees to be governed by special regulations determining the duties assigned to them and mode of discharging same.

Government Commissioner-General's Department.

Art. 6.—The Department of the Commissioner-General of the Government is conducted by the Duke d'Ursel, Commissioner-General, with the co-operation of M. J. Gody, Deputy Commissioner-General, General Manager of the Belgian Section, assisted by special Commissioners.

The Commissioner-General of the Government is the Government Representative with the Executive Committee of the Exhibition Company and with the Representatives or Delegates of Foreign Countries taking part in the Exhibition.

He acts as the Official medium both between said representatives or delegates of Foreign Countries and the Exhibition Company, and between the former and the Belgian Government in connection in all matters requiring consideration on behalf of their Exhibitors.

All enquiries generally are to be addressed to the Commissioner-General.

Concurrently with the Executive Committee of the Exhibition Company, the Government Commissioner-General will settle the whole plan of the Halls and laying out of the grounds, the general scheme for allotment of space in the Belgian and Foreign Sections and also the programme of right of way and party walls in these sections.

(*) The Board of Directors is composed of Messrs. Baron Ferdinand Baeyens, President; Emile De Lannoy, Emile De Mot, Gustave Francotte, Victor Fris, Baron Leon Lambert, Edmond Nerincx, Vice-Presidents; Jacques Cassel, Eugene Cavenaille, Victor De Locht, Georges Dupret, Baron Edouard Empain, Léon Janssen, Maurice Lemonnier, Omer Lepreux Fernand van der Straeten-Solvay, Francois Vaxelaire-Claes, members; Francis Wiener, Secretary, and Raoul Van den Bulcke, Assistant Secretary.

He will act between Foreign Commissioners and the Executive Committee of the Exhibition Company in regard to the preparation of agreements for hire of space, cartage and handling of exhibits, storage of empties, etc., etc., but no personal responsibility will attach on that account.

He is to approve and adopt regulations, more particularly those connected with the cartage and handling service, the entries, maintenance of order, setting up and operation of machinery and mechanical or electrical appliances and installations.

The Government Commissioner-General, jointly with Mr. Gody, General Manager of the Belgian Section, will organise and control the participation of Belgian producers.

Special regulations will determine the functions and duties to be exercised by the Government Commissioner-General's Department and fix its relations with the Commission of the Belgian Section.

Belgian and Foreign Commissioners and Delegates.

Art. 7.—The Belgian Ministries and Public Administrations will accredit Delegates for the purpose of organising their special exhibitions, such delegates to be placed under the authority of the Government Commissioner-General.

Foreign Governments have been advised of the organisation of the Brussels Universal and International Exhibition, in which they will be invited to take part and to be officially represented by accredited Commissioners; these Commissioners, representing their respective nationalities and having the charge of their interests, will arrange with the Executive Committee of the Exhibition Company through the Government Commissioner-General all questions relating to the distribution of space reserved to their respective country and installation of each national section. Collective Exhibitors belonging to countries which are not officially represented can be admitted with the joint consent of the Executive Committee and Government Commissioner-General and may designate Commissioners subject to like approval. Exhibitors are not allowed to correspond with the Executive Committee except through the Representative or Delegate of their Country, but an Exhibitor whose country should not be represented by a Commissioner may correspond direct with the Executive Committee. This latter Committee will furnish all necessary information and circulate the Regulations required to be complied with by the Representatives or delegates of the different nations and their Exhibitors.

Exchange of Space.

Art. 8.—No interchange of allotted space can take place between one country and another, unless with the sanction of the Executive Committee obtained through the Commissioner-General of the Belgian Government.

Classification of Goods.

Art. 9.—All products shall be divided into groups and classes as per list of general classification hereunto annexed. This document gives a summary enumeration of the products of each class; but is not restrictive. In case of doubt as to the classification of any article, the matter will be decided jointly between the Executive Committee and the Government Commissioner-General. Any small alterations which it may subsequently be necessary to make in the division of exhibits between the different classes shall be sanctioned by the Commissioner-General of the Government. This classification will form the basis of the arrangement of the products in each department allotted to the Exhibitors of a same nation, and on the International departments covering the Machine and Railway plant galleries.

General and Special Catalogues.

Art. 10.—The Executive Committee will compile an official and complete catalogue, methodically arranged, and containing the name and address of each Exhibitor with particulars as to trade and place of production (whether a factory, farm, etc.) the necessary information for which will be supplied by the Exhibitors under their sole responsibility, and according to the special * form which will be found herewith.

* Not printed.

Commissioners of represented Foreign Countries will be at liberty to issue, at their own expense, a special catalogue of their exhibits and to sell the same within their respective limits.

Protection of Inventions.

Art. 11.—The necessary measures will be taken by the Government for protecting in Belgium patentable inventions, industrial designs and models, as well as manufacturing or trade marks appearing at the Exhibition. It will be strictly forbidden to take copies, drawings, measurements, photos, cards or models of any objects exhibited unless with the Exhibitor's consent; the closest watch will be kept to enforce this rule. Nevertheless neither the Board of Directors nor the Executive Committee will incur any responsibility on account of infractions of this provision, dereliction of duty on the part of the guardians or violation of their orders.

The Executive Committee reserve to themselves the right of allowing general views to be taken and sold without the Exhibitor's consent being required.

Posters, Hand-bills, Show-cases, Signboards.

Art. 12.—All advertisements and notices, official or other printed matter intended to be posted or distributed within the Exhibition, must first be submitted to the approval of the Executive Committee who will be entitled to withdraw their authority at any time.

Exhibitors will be required to submit to the Executive Committee for approval, plans of any show-cases, furniture or other fixtures intended to be used by them, and as regards machinery, apparatus and plant connected with industry, noted plans showing height of proposed installation, including foundation and underground work with statement of the total weight of the installation.

The Executive Committee, concurrently with the Commissioner-General of the Government, will regulate all matters affecting dimensions and placing of signboards.

Compliance with the Laws and Regulations.

Art. 13.—Exhibits of every description are to comply with the various requirements of the Laws and Regulations in force for the time being in Belgium. Exhibitors will be required to fulfil all the formalities prescribed by said Laws and Regulations, unless waved at the time by the competent Authorities.

The Belgian Government will grant administrative facilities for operating steam engines necessary for the purposes of the Exhibition.

Space Rent.

Art. 14.—All matters respecting the rent to be paid by Exhibitors for the space allotted to them will be found in Chapter II hereof.

Floorings and Partitions.

Art. 15.—The flooring of the Halls is calculated to bear per square metre a weight of 500 kilogs and in some parts to be mutually agreed upon, up to 1,500 kilogs. Whenever alteration to the floors may be wanted for heavy or special exhibits, the consent of the Executive Committee will be required, and the work performed at Exhibitor's expense

In their application for space, Exhibitors shall state the weight of their installation to the square metre.

Any partitions required over and above those leased by the Executive Committee shall, after being approved by the latter, be provided at Exhibitor's expense.

Decoration of Halls

Art. 16.—The decoration will have to be borne by the Exhibitors, individually or collectively, subject to being first approved by the Executive Committee and the Commissioner-General of the Government.

Carriage for Exhibits.

Art. 17.—The Exhibition Company as secured from the Belgian Government:

(*a*) Free carriage to and fro, on the State Railway lines, of Belgian products consigned to the Exhibition.

This exemption from freight extends to raw materials for manufacturing purposes or for producing motive power at the Exhibition, and likewise to empties and packages having contained the goods and required for their return.

(*b*) The application of freight rates as per Tariff No. 10, in the case of foreign goods travelling on the State Railway lines. (This tariff provides for the free carriage on return from, and for the payment of the full rates on consignment to the Exhibition.)

Negociations will be opened with the view of obtaining reductions on Belgian Companies' lines, on Foreign lines and on the regular lines of steamers.

(*c*) The opening of a Post-Telegraph and Telephone Office within the Exhibition.

Handling of Goods.

Art. 18.—The Exhibition Company undertake on behalf of persons exhibiting in detached spaces, the handling of goods within the Exhibition, free of charge, in respect of all packages of usual sizes and not exceeding 1,500 kilogs in weight, provided same are delivered on or before the 10th April, 1910. This includes:

(*a*) Taking delivery of the packages within the Exhibition premises;

(*b*) Unloading on the spot allotted;

(*c*) Removing empties and packages from, and bringing back to the spot allotted;

(*d*) Removing the goods when repacked.

Exhibitors shall comply with the instructions given to them by the Executive Committee with the view of facilitating the removal of empties.

The Executive Committee will cause to be stored and, at the close of the Exhibition, brought back for repacking, empties belonging to foreign Exhibitors, but will not be responsible for the condition thereof when so returned.

Rent for storing empties will be charged at the rate of frs. 2·50 per square metre of surface measured according to the greatest dimensions above the floor, with a minimum charge of frs. 2·50 for any empty not reaching a square metre.

Foreign Exhibitors wishing to take charge of their own empties will have to remove them immediately after unpacking, and comply with the instructions of the Executive Committee.

Special terms must be arranged with the Executive Committee for the handling of packages exceeding 1,500 kilogs, also for any single package exceeding that weight, such as blocks of stone or marble, iron wares, parts of machinery, cannons, fitted engines and threshers, etc. Also when the dimensions exceed the surface of ordinary Railway trucks, such as timber, iron bars, beams, rolling stock (locomotives, railway and tramway carriages, cars, etc.) and craft. Further, in the case of any bulky packages of articles of a breakable nature, in certain instances, Exhibitors may be required to join in, or to solely take charge of the handling of the goods.

The Executive Committee reserve to themselves the right to make arrangements, if possible, so that any travelling cranes intended for exhibition in the machinery gallery be set in working order sufficiently beforehand to be used for shifting and erecting work incumbent upon the Exhibitors, subject to payment of a fee.

With all Countries officially represented, the Executive Committtee are prepared to arrange special terms for the handling of goods and storage of empties.

No contractor letting out show-cases, mirrors, furniture, posters and signboards, or no outdoor salesmen will be entitled to the warehousing or return of empties, the Executive Committee not undertaking to interfere therein in any way.

The unpacking, laying out and repacking of goods and the repairing of empties, will be at Exhibitor's own cost. The repacking will be proceeded with according to the Executive Committee's instructions and must be completed before 31st December 1910, and all fixtures removed before 15th January 1911, after which date all remaining goods will be removed and stored at Exhibitor's cost and risk.

All goods unremoved by the 1st February 1911 will be sold by public auction six months afterwards, and the Exhibition Company will be entitled to proceeds of the sale.

Each Exhibitor or his delegate is to attend the reception of his goods, on arrival, and control the identity of same. Failing the Exhibitor's or their agents being on the Exhibition premises to receive their packages, it will be optional with the Executive Committee to return the goods or unpack them at the expense and risk of the owner.

All materials intended for fixtures must, before introduction, be submitted to the Executive Committee for approval.

The Exhibition Company undertake that all goods will be handled with the greatest care, but it is expressly stipulated that in no case can the Company be held responsible for any loss, shortage, damage, etc., to packages or their contents.

Installation, Maintenance and Removal of Exhibits.

Art. 19.—The Foreign Public Administrations and Commissions will carry out their own installations in the special pavilions erected by them in the grounds or parts of Halls specially allotted them, subject to submitting their general plans to the approval of the Executive Committee who will agree to same jointly with the Government Commissioner-General.

Art. 20.—Exhibitors, whether singly or collectively, will have to bear the entire expense of their installations, such as special decorations, superstructure and consolidation of floors, partition framework and coating, ceilings, drapery, enclosures, supply of furniture, arrangement, ornamentation, laying out, preservation and cleaning of goods, foundations, fixing up, motive power, steam, water, gas, electricity, taking down, storage of empties, insurance, plantings and special levellings; reinstating the premises; customs or excise duties; license dues on excisable commodities, etc., etc., all measures in this connection to be approved by the Executive Committee and the Commissioner-General of the Government. Exhibitors will be held responsible for any damages caused by their installations to floorings, partitions, etc., in their use, and for such dilapidations as might be considered due to misuse.

No Exhibitor shall be allowed to set up his installation in such a way as to deprive another Exhibitor from light, or to cause him any inconvenience or prejudice whatsoever.

Save under a special authority, Exhibitors, whether singly or collectively, will not be allowed to cover up their exhibits during the hours fixed for public admission to the Halls and Pavilions.

No exhibits may be removed before the close of the Exhibition, except with the Executive Committee's special consent in writing.

Exhibitors are not allowed to remove their exhibits, products or fixtures, until after paying the charges for space, selling dues, damages (if any), etc.

CHAPTER II.

SPECIAL PROVISIONS.

Articles excluded.

Art. 21.—The Exhibition is not available to explosive, detonating and fulminant materials, nor generally any dangerous or injurious articles including medicines—patent or not—secret remedies and empiric preparations of unknown ingredients.

Alcohol, spirits, oils, essences, corrosive liquids and all matters likely to endanger other exhibits or inconvenience the public will only be admitted if contained in suitable strong vessels of small size.

Percussion caps, gun-primers, fireworks, matches and other like articles will be admitted in imitation form only, *i. e*, without any adjunction of inflammable matter.

Articles likely to prove a nuisance, or of an unwholesome nature will be subject to such precautionary measures as may be prescribed.

The Executive Committee will also have absolute right to order the removal of products, the nature or appearance whereof might be dangerous, unsuitable or incompatible with the aim and conveniences of the Exhibition.

Applications for Admission.

Art. 22.—Applications for admission must be made on the acccompanying forms,* supplied by the Executive Committee, and these after being duly filled up and signed in duplicate, are to be forwarded in a prepaid envelope, not later than the 15th January 1909 as to machinery, apparatus and plant connected with industry, and before the 1st May 1909, as to other goods:

*Not printed.

(*a*) To the Government Commissioner-General as regards exhibits of Belgian origin;

(*b*) To the Commissioners of Countries officially represented at the Exhibition, as regards exhibits originating from those Countries;

(*c*) To the Executive Committee of the Exhibition, 34, Rue des XII Apôtres, Brussels, as regards exhibits originating from Countries not officially represented.

Applicants referred to in (*c*) shall not send their goods until their application has been considered by the Executive Committee and a certificate of admission duly issued.

Art. 23.—The allotted space will be measured according to the greatest length and width above the floor or ground.

All surfaces are to be established to the great square.

No allotted space can be assigned, exchanged or sub-let except with the express consent of the Executive Committee.

Exhibitors whether singly or collectively shall provide at their own expense, subject to the approbation of the Executive Committee, the ceilings, drapings, stuffs, linen or jute material, partition framework and coating, superstructure of floorings, foundations or consolidation of floors for heavy installations, all schemes connected with such installations, to be approved by the Executive Committee and the Government Commissioner-General.

Charges for Space.

Art. 24—The spaces in the Belgian Section or in officially represented Sections will be granted for such rent and on such terms and conditions as the Commissioner-General of each section shall determine.

Art. 25.—The charge for space in the different compartments—except in *the official sections and the Sections recognised by the Executive Committee jointly with the approval of the Commissioner-General*—including the general decoration of the halls and handling of the goods, has been established according to position as follows:—

I.—HALLS OF INDUSTRY AND TRADE.

A.—SIDE GALLERIES.

1. Collective Space.

Ground space	*A*) Depth not exceeding 1 metre, *Per lineal metre frontage*	fr.	60
	B) Depth exceeding 1 metre, *Per square metre ground surface* ...	„	60
Wall space:	*C*) *Per lineal metre frontage*	„	60
The charge for collective space allotted will in no case be less than		„	60

2. Detached Space.

A) Measured at the greatest dimension, the smallest being below 1 metre, *Per lineal metre frontage* ... ... fr. 90
B) Both dimensions exceeding 1 metre, *Per square metre ground surface* ... ... „ 90
The charge for detached space allotted will in no case be less than ... „ 90

B.—CENTRAL GALLERIES.

1. The charge will be ... Collective space, *Per square metre* ... ... fr. 90; Detached space, *Per square metre* ... ... „ 130
2. Charge for booths having at least 5 metres frontage and 5 metres depth. Single frontage, *Per square metre* ... ... „ 70; Corner frontage, *Per square metre* ... ... „ 90

II.—HALLS OF MACHINERY, ELECTRICITY, RAILWAY PLANT AND BOILER SHED.

FOR MACHINES AND VARIOUS INSTALLATIONS.

A.—SIDE GALLERIES.

1. Collective Space.

Ground space: *A)* The depth not exceeding 1 metre, *Per lineal metre frontage* ... ... fr. 60; *B)* The depth exceeding 1 metre, *Per square metre ground surface* ... „ 60
Wall space: *C) Per lineal metre frontage* ... ... „ 60
The charge for collective space allotted will in no case be less than ... „ 60

2. Detached Space.

A) Measured at the greatest dimension, the smallest being below 1 metre, *Per lineal metre frontage* ... ... „ 90
B) Both dimensions exceeding 1 metre, *Per square metre ground surface* ... ... „ 90
The charge for detached space allotted will in no case be less than .. „ 90

B.—CENTRAL GALLERIES.

The charges have been fixed as follows ... Collective space, *Per square metre* ... fr. 90; Detached space, *Per square metre* ... ... „ 130

For any machine in operation, the duly proved expense of purchasing steam, water under pressure, gas, electricity and mechanical motive power will be refunded to the Exhibitor up to 50 per cent. of the amount paid for the space occupied by said machine, provided the expenses in question have been effected during the hours when the Halls are available to the public and the machine has been in operation at least four days per week and four hours per day.

III.—GARDENS, SHEDS AND TENTS.

For space allotted to Exhibitors in the Gardens:
A) The depth not exceeding 1 metre, *Per lineal metre frontage* ... ... fr. 25
B) The depth exceeding 1 metre, *Per square metre ground surface* ... ... „ 25
The charge for space in this division will in no case be less than ... „ 25

For space allotted under sheds or tents, if any, the above charges will be increased by 5 fr. per lineal metre, or square metre, as the case may be.

Payments.

Art. 26.—Rent for space will be collected by the Executive Committee of the Exhibition Company.

When exceeding 1,000 frs., same is payable in two equal instalments, the first on receipt of the admission certificate, the second on the 1st April 1910.

Rent under or equal to 1,000 frs., is payable at once on receipt of the admission certificate.

Any Exhibitor failing to pay the rent within the prescribed time will forfeit his rights and the admission certificate issued to him will be deemed cancelled.

Large Spaces.

Art. 27.—Special terms may be arranged in respect of large spaces hired in the Halls or Gardens.

In every Section, the space reserved for public Circulation must be kept free by the several countries, and no encroachment thereon will be tolerated.

In regard to spaces let out in blocks, the public circulation ways will de reckoned in the measurement of the surfaces leased, but one-half only of such ways will be counted in the case of frontage allotments.

Date of completion of Exhibits.

Art. 28.—Exhibits must be completed and all the work connected therewith terminated before the 15th April, 1910,

Machinery and appliances which can only be fixed or mounted by passing over the space of other Exhibitors shall be completely set up by the 15th October 1909, or even earlier, should the Executive Committee deem necessary

All machinery foundation work must be terminated on or before the 1st October 1909.

Should the Exhibitor fail to comply with above dates, he will *ipso facto* lose all claim to his space, the admission certificate will be deemed cancelled and the space rent paid will be forfeited to the Exhibition Company, without any legal or other proceedings being required. In such case, the Executive Committee will be entitled to remove unfinished installations or to have the same completed at Exhibitor's expense and risk.

Special Charges.

Art. 29.—Exhibitors requiring steam, water, gas, electricity, shall state in their application for admission the hourly quantity so required.

When motive power is required, the intended rate of speed and requisite power should be stated.

The adoption of electric motors, as also the foundations and expenses of private installation are for Exhibitor's account. Steam, water, gas, electricity and any mechanical motive power will be supplied according to the tariff providing for same.

Separate by-laws will determine the conditions affecting the erection and working of mechanical and electrical machinery, apparatus and appliances, and will be forwarded to Exhibitors on application.

Exhibitors' co-operation towards the services of the Exhibition.

Art. 30.—Exhibitors wishing to place all or part of the work performed by their machinery, apparatus and appliances, at the disposal of the Exhibition with the view of co-operating, on terms to be agreed upon, towards the production, distribution and utilisation of steam, water, gas, and motive power, or towards the lighting and handling services, shall submit their propositions to the Executive Committee prior to the 15th January, 1909.

International Jury of Awards.

Art. 31.—An International Jury of Awards will be formed, the Members of which will be appointed by their respective Governments; this Jury will be organised and controlled by the Commissioner-General of the Belgian Government. Jurors of non-officially represented Countries shall be proposed by the Delegates of the Exhibitors of those nations and, if necessary, their appointment will have to be sanctioned by the Belgian Government; on the recommendation of the Commissioner-General of the Government.

The Jury will officiate as soon after the opening of the Exhibition as possible.

The Awards will consist of Grand Prize Diplomas; Diplomas of Honour; Diplomas of Gold, Silver and Bronze Medals, and Diplomas of Honourable Mention. These Diplomas may be accompanied by a Medal. The Awards will be delivered before the close of the Exhibition, in a grand fête held specially for the occasion, and a full list of Awards will receive the greatest publicity.

International Test Committees.

Art. 32.—International Committees may be formed for tests or trials similar to those of former Exhibitions.

Lottery.

Art. 33.—A lottery will be organised under the authority and control of the Government; the prizes will be purchased from Exhibitors or as regards series of tickets issued prior to the opening from such persons as shall have given a written undertaking to exhibit.

CHAPTER III.

ADMINISTRATION AND POLICE.

Exhibition of Products under names of Applicants.

Art. 34.—Products must be exhibited under the names of those persons who signed the applications for space; this rule will be strictly enforced.

Exhibitors who intend showing industrial art productions of which they are not the originators, must inform the Executive Committee and furnish due authorisation from the rightful proprietors.

Art. 35.—Exhibitors are free to add to their name, or style or firm the names of other persons having contributed to the merit and value of the articles exhibited.

Price of Exhibits.

Art. 36.—Exhibitors are invited to indicate the Market Price of the articles shown, as a guide to the Jury, as well as for the information of the public and of the Lottery Purchase Commission.

PROTECTION OF EXHIBITS.

Insurance—General and Special Supervision.

Art. 37.—Due precautions will be taken to protect all exhibits and packages from damage, and a general watch will be established to prevent the fixtures and exhibits being stolen, strayed or damaged.

The Government nor the Exhibition Company shall in no case be held responsible for injury or damage, whatever be the extent, suffered by Exhibitors in consequence of theft, fire, thunder and other storms, or floods, gas, explosions, flaw in construction or arising from any other cause whatsoever, nor shall Exhibitors have any claim on account of these risks, either against the Government, or against the Exhibition Company.

Exhibitors desirous of insuring their goods, packages, etc., must do so through their own Agents and at their own cost.

Exhibitors will be answerable to the Exhibition Company and to other Exhibitors and parties, for all damage caused by their exhibits or by persons in their employ.

The Commissioners of participating countries as well as Exhibitors, whether singly or collectively, will be free to appoint under their own responsibility private inspectors and superintendents from a list approved by the Executive Committee; these officers will have to submit to the regulation framed by the Executive Committee.

Right to sell.

Art. 38.—Articles of every day sale, also those manufactured or made up on the spot may be sold and delivered to visitors, on payment of a percentage, to be fixed by agreement, and compliance with special by-laws; but no such sales may take place in the Halls without a special authority in writing from the Executive Committee.

No article of food or drink can be served within the Halls except by authority of the Executive Committee.

A special agreement with the Executive Committee will regulate the sale of refreshments or eatables in the gardens and grounds of the Exhibition and determine the tax to be paid.

Entries.

Art. 39.—One single free ticket will be issued to each Exhibitor or his Agent approved of by the Executive Committee, if the nature and importance of the exhibits require the continuous attendance of such Agent. This ticket shall not be transferable and shall be withdrawn if proved to have been made over or lent, without prejudice of further action. It must be signed by the Exhibitor or his Agent, shew the photograph of bearer, and mention the group and class to which he belongs. It will, moreover, bear the stamp of the Executive Committee.

Any person acting as Agent to several Exhibitors will be entitled to one free ticket only. Each Exhibitor will be entitled to one or more tickets for persons in his employ, but giving admission from 8 to 10 A.M. only.

Exhibitors of machinery in operation shall be entitled to one or more cards available for their men whilst the machinery is working.

The number of tickets to be issued will be solely determined by the Commissioner-General of the Government and the Executive Committee, they will be withdrawn in case of misuse or fraud.

The entries will be regulated by special rules.

Exhibition to be treated as an actual Bonded Warehouse.

Art. 40.—The Exhibition will be treated as an actual bonded warehouse, foreign goods intended to appear at the Exhibition being allowed provisional free importation subject to being afterwards re-exported and complying with such formalities as the Belgian Government may impose.

Subsequent Rules.

Art. 41.—Rules will be issued later on, for regulating the despatch, reception, handling, installation and return of goods; and also for providing for the organisation of supervision, customs, entries to the Exhibition, right of sale, formation and proceedings of the International Jury of Awards.

Special by-laws will provide for the establishment and working of mechanical and electric machinery, apparatus and appliances.

Art. 42.—Exhibitors or Contractors intending to erect constructions or stalls in the Gardens of the Exhibition must conform to the conditions which will be framed by the Executive Committee.

Separate and independent rules will regulate the licensing of special paying shows and eating or drinking establishments or places of performance, restaurants, bars, luncheon rooms, tobacco shops, etc., etc.

Art. 43.—Producers and manufacturers will by the mere fact of accepting the quality of Exhibitors, submit to the General or Special regulations and to such other measures of order and police as may be enacted in the future.

Exhibitors or Contractors will be required to elect domicile at Brussels.

CHAPTER IV.

ANNEXED SHOWS.—CONGRESSES AND CONFERENCES.

Special Shows—Congresses and Conferences.

Art. 44.—Additional and temporary Shows, Congresses and Conferences, Lectures, Grand Fêtes, Choral and Musical Competitions, Concerts, etc., etc., will be organised during the Exhibition.

Art. 45.—The Executive Committee propose to promote International Congresses, and in a general way, will consider and, if thought fit, patronize all such schemes as are of a realisation likely to further enhance the attraction and èclat of the Exhibition.

Address for Communications.

Art. 46.—All communications connected with the Exhibition are to be addressed by prepaid letter, to *The President of the Executive Committee, 34*, Rue des *XII Apotres, Brussels.*

Resolved in Executive Committee Meeting held on the 24th January 1908.

CLASSIFICATION ACCORDING TO GROUPS.

GROUP I.—*Education.*

Class 1.—Education of children. Primary education. Education of adults.
Class 2.—Secondary education.
Class 3.—Higher education. Scientific institutions.
Class 4.—Special artistic education.
Class 5.—Special agricultural education.
Class 6.—Special industrial and commercial education.

GROUP II.—*Works of Arts.*

Class 7.—Paintings. Cartoons. Drawings.
Class 8.—Engraving and lithography.
Class 9.—Metal and fine stone carving and engraving.
Class 10.—Architecture.

GROUP III.—*Instruments and general methods connected with Letters, Sciences and Arts.*

Class 11.—Printing. Sundry impressions.
Class 12.—Book-trade. Musical editions. Book-binding (plant and products). Newspapers. Posters.
Class 13.—Photography.
Class 14.—Geographical and cosmographical maps and appliances. Topography.
Class 15.—Instruments of precision. Coins and medals.
Class 16.—Medicine and surgery.
Class 17.—Musical instruments.
Class 18.—Theatrical [illegible] plant.

GROUP IV.—*[illegible]t and general methods connected with Machinery.*

Class 19.—Steam [illegible]
Class 20.—Various [illegible]otors.
Class 21.—Various apparatus of general mechanics.
Class 22.—Machine-tools.

GROUP V.—*Electricity.*

Class 23.—Mechanical production and utilisation of electricity.
Class 24.—Electrochemistry.
Class 25.—Electric lighting.
Class 26.—Telegraphy and Telephony.
Class 27.—Various applications of electricity.

GROUP VI.—*Civil Engineering.—Means of Transport.*

Class 28.—Civil engineering materials. Equipment and methods.
Class 29.—Models, plans and drawings of public works.
Class 30.—Coachbuilders' and cartwrights' trades.—Saddle and Harness makers' trades.
Class 31.—Motor-cars and cycles.
Class 32.—Railway and Tramway plant.
Class 33.—Commercial Navigation equipment.
Class 34.—Aerial Navigation.

GROUP VII.—*Agriculture.*

Class 35.—Rural husbandry plant and methods.
Class 36.—Viticultural implements and methods.
Class 37.—Agricultural implements and methods.
Class 38.—Agronomy.—Agricultural statistics.
Class 39.—Agricultural products of vegetable origin used as foodstuffs.
Class 40.—Agricultural products of animal origin used as foodstuffs.
Class 41.—Non-edible agricultural produce.
Class 42.—Useful insects and their products.—Noxious insects and vegetable parasites.

GROUP VIII.—*Horticulture and Arboriculture.*

Class 43.—Horticultural and Arboricultural implements and methods.
Class 44.—Pot herbs.
Class 45.—Fruit-trees and fruits.
Class 46.—Ornamental trees, shrubs, plants and flowers.
Class 47.—Hot-house plants.
Class 48.—Horticultural and Nursery seeds and stock.

GROUP IX.—*Forestry.—Hunting and Shooting.—Fisheries.—Fruit gathering.*

Class 49.—Plant and methods for forest exploitation and industry.
Class 50.—Forest produce.
Class 51.—Hunting and shooting requisites.
Class 52.—Hunting and shooting produce.
Class 53.—Fishing tackle, implements and produce.—Water culture.
Class 54.—Fruit-gathering tackle, implements and produce.

GROUP X.—*Foodstuffs.*

Class 55.—Food industry implements and methods.
Class 56.—Farinaceous goods and by-products.
Class 57.—Bakers' and Pastrycooks' goods.
Class 58.—Preserved meat, fish, vegetables and fruits.
Class 59.—Sugar and confectionery, condiments and stimulants.
Class 60.—Wines and brandies.
Class 61.—Syrups and liqueurs, various spirits, industrial alcohols.
Class 62.—Miscellaneous beverages.

GROUP XI.—*Mining.—Metallurgy.*

Class 63.—Mine, ore and quarry working.
Class 64.—Heavy metallurgy.
Class 65.—Light metallurgy.

GROUP XII.—*Decoration and Furnishing of Public Buildings and Private Houses.*

Class 66.—Fixed decoration of Public buildings and private houses.
Class 67.—Stained window glass.
Class 68.—Painted wall papers.
Class 69.—Cheap furniture and costly furniture.
Class 70.—Carpeting, tapestry and other furnishing stuffs.
Class 71.—Movable decoration and upholstery work.
Class 72.—Ceramic ware.
Class 73.—Crystal and glass wares.
Class 74.—Heating and ventilating apparatus and methods.
Class 75.—Apparatus and methods for non-electric lighting.

GROUP XIII.—*Yarns.—Textile Fabrics.—Clothing.*

Class 76.—Plant and methods connected with spinning and ropemaking.
Class 77.—Plant and methods used in weaving.
Class 78.—Plant and methods for bleaching, dyeing, printing and sizing textile fabrics through their different stages.
Class 79.—Plant and methods for sewing and making up clothing.
Class 80.—Cotton yarns and fabrics.
Class 81.—Yarns and fabrics of linen, hemp, etc. Ropemaker's wares.
Class 82.—Woollen yarns and fabrics.
Class 83.—Silk and textiles of silk.
Class 84.—Lace, embroideries and trimmings.
Class 85.—Men's, women's and children's clothing: making up and sewing trades
Class 86.—Various trades in the clothing line.

GROUP XIV.—*Chemical Industry.*

Class 87.—Chemical arts and pharmacy.
Class 88.—Paper making.
Class 89.—Hides and skins.
Class 90.—Perfumery.
Class 91.—Tobaccos.

GROUP XV.—*Miscellaneous Industries.*

Class 92.—Stationery.
Class 93.—Cutlery.
Class 94.—Gold and silversmiths' wares.
Class 95.—Jewellery.
Class 96.—Clock and watch makers' goods.
Class 97.—Artistic bronze, cast and other iron work. Embossed metals.
Class 98.—Brush, morocco, turnery and basket trades.
Class 99.—India rubber and gutta-percha industry.—Travelling and camping requisites.
Class 100.—Knick-knacks.

GROUP XVI.—*Social Economy.*

Class 101.—Apprenticeship. Protection of working children.
Class 102.—Labour contract. Participation in profits.—Professional Syndicates.
Class 103.—Large and minor industry. Co-operative associations of production or credit.
Class 104.—Co-operative societies of consumption.
Class 105.—Large and minor cultivation.—Agricultural associations.
Class 106.—Regulation of labour.—Health and security of workmen.
Class 107.—Working men's houses.
Class 108.—Provident institutions.
Class 109.—Institutions for the intellectual and moral development of workmen.
Class 110.—Public or private initiative in view of the welfare of citizens.

GROUP XVII.—*Public Health.—Charitable Institutions.*

Class 111.—Public Health.
Class 112.—Charitable Institutions.

GROUP XVIII.—*Practical Education.—Economic Institutions.—Female Handicraft.*

Class 113.—Education.
Class 114.—Sciences. Arts. Economic Institutions.—Charity.
Class 115.—Female Handicraft.

GROUP XIX.—*Trade.—Colonisation.*

Class 116.—Trade.
Class 117.—Methods of colonisation.
Class 118.—Colonial plant.
Class 119.—Special products for export to the Colonies.

GROUP XX.—*Land and Sea Forces.*

Class 120.—Ordnance equipment and appliances.
Class 121.—Military engineering and services connected therewith.
Class 122.—Naval engineering. Hydraulic work. Torpedoes.
Class 123.—Cartography. Hydrography. Various instruments.
Class 124.—Administrative services.
Class 125.—Sanitation and sanitary appliances.

GROUP XXI.—*Sports.*

Class 126.—Exercise of children and adults.—Theory and practice.
Class 127.—Games and sports for children and adults.
Class 128.—Game and sport equipments.

GROUP XXII.—*Congresses and Conferences.*

ORDERED that the foregoing papers be published in the Supplement to the *Gazette of India* for general information and that copies be forwarded to the Local Governments and Administrations named in the margin, for information, with the request that the papers may be published in the local Gazette.

The Government of Madras.
Do Bombay.
Do Bengal.
Do the United Provinces.
Do the Punjab.
Do Burma.
Do Eastern Bengal and Assam.
The Hon'ble the Chief Commissioner, Central Provinces.
The Chief Commissioner of Coorg.

Ordered, also, that a copy be forwarded to the Chief Commissioner of Ajmer-Merwara, and the Honourable the Agent to the Governor-General and Chief Commissioner, North-west Frontier Province, for information, and to the Foreign Department, for information and communication to Native States.

Ordered, also, that a copy be forwarded to all Chambers of Commerce for information.

B. ROBERTSON,
Secretary to the Government of India.

DISTRICT REPORTS.

8. Markets how supplied.

9. Progress of agricultural operations, state of standing crops, prospects and probable outturn of harvests, serious damage done to crops by insects or other natural calamities.

10. Prospects of season, tracts in which the rainfall has been insufficient, areas affected by scarcity, number of people under relief, and state of food stocks.

11. Public health.

12. Remarks as to the condition of agricultural stock, failure of pasturage of fodder, etc.

BANGALORE CIVIL AND MILITARY STATION.

	Average for the past five years of the corresponding week.	*Current*	
Prices of food grains—Rice ...	7¼	5⅜ to 6	seers per rupee.
Ragi ...	19½	12 to 13	seers per rupee.

Agricultural operations.—Weeding in ragi fields.

State of standing crops.—Want of rain is felt.

Cattle are in good condition. Water and fodder sufficient.

BANGALORE CITY AND TALUKS.

8. Market well supplied.

9. *Agricultural operations.*—Harrowing and weeding processes are being briskly carried on all over the district.

Standing crops, viz., paddy, sugar-cane, mulberry, ragi, haraka and castor are reported to be in good condition. But rain is badly wanted, however.

Crop sown.—Horse gram in the Bangalore, Magadi, Kankanhalli and Dodballapur Taluks.

Crop harvested.—Gingelly in all the taluks.

10. Food stuffs are available in sufficient quantities but their prices continue to be high and stationary as before.

11. Except for a few cases of plague reported to have occurred in certain villages of the Bangalore, Hoskote, Dodballapur, Nelamangala, Kankanhalli and Magadi Taluks, public health generally good.

12. Cattle are reported to be healthy all over the district. But "Dod Roga" is reported to be still existing in the Magadi Taluk. Drinking water and fodder are reported to be available in sufficient quantities.

KOLAR.

8. Market well supplied.

9. *Standing crops* are reported to be withering for want of rain in almost all the taluks of the district, except Sidlaghatta and Chikballapur, where there has been some rain. Ragi crop in the Bowringpet and Goribidnur Taluks is reported to be affected with the disease known locally as "Kumbli Roga."

Crops sown.—Ragi in Sidlaghatta and Bagepalli; kulthi in Chintamani, Chikballapur, Bagepalli and Gudibanda; and avare in Sidlaghatta.

Crops harvested.—Nil.

10. Prospects of the season fair, but rain is very badly needed throughout the district. Food stuffs available. But their prices continue to be very high.

11. Except for plague in a few villages of the Malur and Sidlaghatta Taluks, public health generally good.

12. It is reported that "Rinderpest" is prevailing in parts of Kolar, Mulbagal, Bagepalli, Goribidnur, Malur and Gudibanda. Water available. Fodder just sufficient.

TUMKUR.

8. Market well supplied.

9. *Standing crops* are reported to be moderately in good condition in the taluks of Tumkur, Gubbi and Koratagere and withering for want of rain in the remaining taluks. In some villages of the Turuvekere Sub-Taluk, ragi is reported to be affected with a disease known locally as "Barpe Hula."

Crops sown.—Ragi, paddy and horse gram in Tumkur and Gubbi; avare in Gubbi and Kunigal; togari and savè in Gubbi; and ragi and horse gram in Pavagada.

Crops harvested.—Til and cholum in Gubbi, Tiptur and Turuvekere; sugar-cane in Tumkur, Gubbi, Kunigal and Turuvekere; paddy in Gubbi and natu ragi in Sira.

10. Food stuffs are available in sufficient quantities, but their prices continue to be high. Rain is badly needed throughout the district.

11. Public health generally good.

12. Cattle generally healthy except in portions of Tumkur, Maddagiri, Chiknayakanhalli, Gubbi and Tiptur. Water and fodder are getting scanty. Date leaves are also being used in the Sira, Tiptur and Kunigal Taluks and leaves of goni and other trees in the Turuvekere Sub-Taluk.

MYSORE.

8. Market well supplied.

9. *Agricultural operations.*—Paddy is being transplanted in parts of the Seringapatam, Yedatore, Nanjangud, Malvalli, Mandya and Nagamangala Taluks. Transplantations of paddy and sowing of ragi in parts of the Chamrajnagar Taluk are reported to have been delayed for want of rain.

Standing crops are reported to be in moderately good condition in all the taluks, except in parts of the Malvalli and Chamrajnagar Taluks, where they are reported to be withering for want of rain. So also ragi in parts of the Nanjangud and Mandya Taluks are in need of rain.

Crops sown.—Ragi in parts of the T.-Narsipur Taluk; and horse-gram in parts of the Krishnarajpete and T.-Narsipur Taluks.

Crops harvested.—Cholum in parts of the Mysore, Gundlupet, Nanjangud, T.-Narsipur and Nagamangala Taluks; til in parts of the Mysore, Seringapatam, Hunsur, Gundlupet and Nanjangud Taluks; ragi in parts of the Hunsur, Heggaddevankote, Gundlupet and Nanjangud Taluks; and sugar-cane in parts of the T.-Narsipur Taluk.

10. Prospects of the season generally good. But standing crops in parts of the Chamrajnagar, Seringapatam, Nanjangud, T.-Narsipur, Malvalli, Mandya, Krishnarajpete and Nagamangala Taluks are reported to be in need of rain. Raiyats and merchants have sufficient stock of food grains for the present.

11. Except for plague in a few places in the district, public health generally good.

12. Cattle in parts of the Mysore, Chamrajnagar and T.-Narsipur Taluks are reported to be suffering from "Dod Roga" and from "Sappe Roga" and "Batti Roga" in parts of the Yedatore Taluk. Water and fodder are available, except in parts of the Nagamangala Taluk, where stock of fodder is reported to be diminishing.

HASSAN.

8. Market well supplied.

9. *Agricultural operations.*—Paddy is being transplanted in the Hassan, Channarayapatna and Manjarabad Taluks.

Standing crops.—Ragi and paddy in all the taluks except Arsikere; castor and togari in the Hassan, Hole-Narsipur and Arkalgud Taluks; sugar-cane in the Hassan, Channarayapatna, Belur and Arsikere Taluks; til in the Arkalgud and Arsikere Taluks; black gram, green gram and coriander in the Arsikere Taluk; avare and chillies in the Hole-Narsipur Taluk; and cholum in the Channarayapatna and Arsikere Taluks; these are reported to be in good condition.

Crops sown.—Avare and horse gram are being sown in the Alur Sub-Taluk.

Crops harvested.—Garlic in the Hassan Taluk, and sugar-cane in the Channarayapatna Taluk, are being harvested.

10. Prospects generally good. Rain is required in the Arsikere Taluk for the withering crops.

11. Except for plague in some parts of the Hassan Taluk, public health generally good.

12. Cattle are generally in good condition. But "Dod Roga" is reported to exist still in parts of the Channarayapatna, Belur, Arsikere and Hole-Narsipur Taluks. Water and fodder available except in parts of the Arsikere Taluk, where date leaves are being used as fodder for cattle.

SHIMOGA.

8. Market well supplied.

9. *Agricultural operations.*—Paddy seedlings are being transplanted in the Nagar and Tirthahalli Taluks.

Standing crops, viz., paddy, ragi, cholum, togari, avare, gingelly, black gram, green gram, chillies and sugar-cane, are in good condition in all the taluks of this district. Arecanut crop is attacked with "Kole Roga" (Rot) in portions of the Nagar and Tirthahalli Taluks.

Crops sown.—Ragi and horse-gram in portions of the Shimoga Taluk and the Kumsi Sub-Taluk, and save, navane and cotton in the Honnali Taluk, are being sown.

10. Prospects of the season generally good. Food stuffs are available in sufficient quantities but their prices continue to be high, in consequence of large exports.

11. Public health generally good. But plague is prevalent in the Shimoga town and in a few villages in its neighbourhood and also in the Channagiri town.

12. Cattle generally healthy. But murrain continues still in the Honnali, Nagar and Tirthahalli Taluks. Water and fodder available.

KADUR.

8. Market well supplied.

9. *Agricultural operations.*—Transplanting of paddy in Chikmagalur, Koppa, Yedahalli and Sringeri.

Standing crops.—

In Chikmagalur—Paddy, sugar-cane, ragi, avare, gingelly, castor, cholum, coriander, black gram, green gram, togari, onions, garlic and coffee.

In Kadur—Paddy, ragi, cholum, avare, black gram, green gram, gingelly, castor, savé and navane.

In Tarikere—Paddy, ragi, cholum, gingelly, sugar-cane, black gram, green gram, avare and togari.

In Koppa—Paddy, sugar-cane, pepper, cardamom and coffee.

In Mudgere—Paddy, ragi, sugar-cane, cardamom and coffee.

In Yedahalli—Paddy, sugar-cane and coffee.

In Sringeri—Paddy.

All the above except those in Kadur and in the maidan parts of the Chikmagalur Taluk where they have begun to fade for want of rain, are reported to be in good condition. And areca crop in Koppa, Yedahalli and Sringeri is reported to be affected with "Kole Roga" (Rot).

Crops sown.—Horse-gram and cholum in Kadur; and ragi, avare, togari and horse gram in Tarikere, are being sown.

Crops harvested and their yield.—Kadur—black gram and green gram, yield 8 annas; and gingelly, yield 4 annas.

10. Prospects of the season fair. Food stuffs sufficient. Rain is urgently wanted in the maidan parts of the district.

11. Public health generally good.

12. But "Dod Roga" is still prevailing in parts of the district. Water and fodder available.

CHITALDRUG

8. Market well supplied.

9. *Standing crops.*—Ragi, cholum, horse-gram, togari, avare, sesamum, green gram, black gram, navane, savé, sajje, castor, cotton and chillies are reported to be generally in good condition except in parts of the Challakere, Molakalmuru, Jagalur and Hosdurga Taluks, where they are withering for want of rain.

Crops sown.—Navane and cotton in the Chitaldrug Taluk; paddy and ragi, under wells, in the Challakere Taluk; and ragi, chillies and paddy, under channels, in the Hiriyur Taluk.

Crops harvested.—Nil.

It is reported that in some villages, cater-pillars have attacked young ragi plants in dry lands.

10. Prospects of the season fair. But more rain is needed for the standing crops generally in all the taluks and especially in the Hiriyur, Challakere and Molakalmuru Taluks. Food stuffs available.

11. Public health generally good.

12. Cattle healthy except in parts of the Hiriyur, Holalkere and Hosdurga Taluks, where "Rinderpest" prevails. Water and fodder available. And for insufficiency of fodder cattle are being fed on date and kamara leaves in the Challakere Taluk and in a few villages of the Molakalmuru Taluk.

BANGALORE,
2nd September 1908

A. RANGASWAMI IYENGAR,
Revenue Commissioner.

THE MYSORE DASARA INDUSTRIAL AND AGRICULTURAL EXHIBITION OF 1908.

GROUP IV—LIVE STOCK.

The following list of prizes proposed to be awarded during the Exhibition of 1908 is published for the information of intending exhibitors.

Serial No.	Description	Money prizes		
		1 Rs.	2 Rs.	3 Rs.
	Bulls.			
1	Breeding bulls 6 teeth and older	20	12	5
2	Do 4 ,, ...	15	10	5
3	Do 2 ,, ...	10	8	4
	Bettada dana.

DISTRICT REPORTS.

8. Markets how supplied.

9. Progress of agricultural operations, state of standing crops prospects and probable outturn of harvests, serious damage done to crops by insects or other natural calamities.

10. Prospects of season, tracts in which the rainfall has been insufficient, areas affected by scarcity, number of people under relief, and state of food stocks

11. Public health.

12. Remarks as to the condition of agricultural stock, failure of pasturage of fodder, etc.

BANGALORE CIVIL AND MILITARY STATION.

	Average for the past five years of the corresponding week.	*Current.*	
Prices of food grains—Rice ...	7¼	5¾ to 6	seers per rupee.
Ragi ...	19½	12 to 13	

Agricutural operations.—Weeding in ragi fields.

State of standing crops.—Want of rain is very much felt.

Cattle are in good condition. Water and fodder sufficient.

BANGALORE CITY AND TALUKS.

8. Market well supplied.

9. *Agricultural operations.*—Harrowing is over, and weeding operations are going on.

Standing crops, viz., sugar-cane, paddy, ragi, haraka and castor, are reported to be in good condition. More rain, however, is badly wanted.

Crop sown.—Horse gram.

Crop harvested.—Gingelly.

10. Sufficient quantities of food stuffs are available, but their prices are reported to be still stationary and as high as before.

11. Except that a few cases of plague are reported to have occurred in parts of the district, excepting the taluks of Dodballapur, Channapatna and Closepet, public health is generally good.

12. Cattle are reported to be still affected with "Dod Roga" in the Kankanhalli Taluk and that it has subsided in Avargere village, where it had broken out some days back. They are healthy in other parts of the district. Drinking water and fodder are reported to be available in sufficient quantities.

KOLAR.

8. Market well supplied.

9. *Standing crops.*—The recent showers have done some good to the standing crops in the district, except in Chintamani, Chikballapur, Malur and Gudibanda, where, it is reported that they are withering for want of rain. It is reported that ragi crop is affected with "Kambli Roga" in the Bowringpet and Goribidnur Taluks.

Crops sown.—Kulthi and huchellu in the Sidlaghatta and Chikballapur Taluks; kulthi in Srinivaspur, Goribidnur and Gudibanda; and ragi in the Bagepalli and Srinivaspur Taluks.

Crops harvested.—Gid, ragi in Gudibanda.

10. Prospects of the season fair, but rain is needed throughout the district. Food stuffs are available, but their prices continue to be very high.

11. Except for plague in a few villages in the Malur and Sidlaghatta Taluks and in the Kuragal village, Kolar Taluk, and small-pox in parts of Mulbagal and Gudibanda, public health generally good.

12. It is reported that "Rinderpest" is prevailing among cattle in parts of Kolar, Mulbagal, Sidlaghatta, Chikballapur, Bagepalli, Goribidnur and Gudibanda. Water available. Fodder just sufficient.

TUMKUR.

8. Market well supplied.

9. *Standing crops* are reported to be in moderately good condition in the taluks of Tumkur and Koratagere and to be withering for want of rain in the remaining taluks. In some villages of the Turuvekere Sub-Taluk, ragi is reported to be affected with a disease locally known as "Barpe Hula."

Crops sown.—Horse gram in Tumkur, Sira, Gubbi and Pavagada; paddy in Gubbi; and ragi, castor, savè and sajje in Pavagada.

Crops harvested.—Sugr-cane in Tumkur, Kunigal and Turuvekere; til and cholum in Sira, Gubbi, Titur and Pavagada; and paddy in Koratagere and Turuvekere.

10. Food stuffs are available in sufficient quantities, but their prices continue to be high. Rain is badly needed throughut the district.

11. Except for plague inHonnavalli, Tiptur Taluk, public health generally good

12. Cattle generally healthy, except in certain villages of Tumkur, Maddagiri, Chiknayakanhalli, Gubbi, Tiptur ad Turuvekere, where they are suffering from "Dodda Roga" and "Chappe Roga." Wate and fodder are getting scarce. Date leaves are being used as fodder in the taluks of Sira, Tiptur and Kunigal, and in the Sub-Taluk of Turuvekere.

MYSORE.

8. Market well supplied.

9. *Agricultural operation.*—Dry lands in parts of the Seringapatam and Malvali Taluks are being ploughed. Paddy in parts of the Yedatore, Nanjangud and Malvalli Taluk is being transplanted. The recent rains in the Chamrajnagar Taluk has greatly helped the transplanting of paddy and the sowing of ragi.

Standing crops are reported to be in moderately good condition in all the aluks after the recent rains. Castor in the villages of Mallur, Nanjangud and Gitahalli is reported to have been infested with insects.

Crops sown.—Ragi in parts of the Seringapatam, T.-Narsipur and Nagamangala Taluks; horse-gram in parts of the Seringapatam and T.-Narsipur Taluks; and green gram in parts of the T.-Narsipur Taluk.

Crops harvested.—Cholum in parts of the Mysore, Hunsur, Yedatore, Gundlupet and Nanjangud Taluks; til in parts of the Mysore, Hunsur, Yedatore, Heggaddevankote, Gundlupet and Nanjangud Taluks; ragi in parts of the Hunsur, Heggaddevankote, Gundlupet and Nanjangud Taluks; and Kar paddy in parts of the Yedatore Taluk.

10. Prospects of the season generally good. But rain is wanted, however, in parts of the T.-Narsipur, Mandya, Krishnarajpete and Nagamangala Taluks. Food stuffs sufficient for the present.

11. Except for plague in a few places in the district, public health generally good.

12. Cattle are generally in good condition. But "Dod Roga" is reported to exist in parts of the Mysore and Chamrajnagar Taluks. It is reported to be subsiding in parts of the T.-Narsipur Taluk. Water and fodder are available, except in parts of the Nagamangala Taluk, where stock of fodder is reported to be diminishing.

HASSAN.

8. Market well supplied.

9. *Agricultural operations.*—Paddy is being transplanted in the Manjarabad and Hassan Taluks.

Standing crops.—Paddy, ragi, castor, togari and sugar-cane in the Hassan, Arkalgud and Channarayapatna Taluks; paddy and ragi in the Manjarabad and Belur Taluks; paddy, ragi, sugar-cane, togari, castor, avare and chillies in the Hole-Narsipur Taluk; and sugar-cane, paddy and ragi in the Alur Sub-Taluk; these are reported to be in good condition.

Crops sown.—Kulthi is being sown in the Arkalgud Taluk and in the Alur Sub-Taluk.

Crops harvested.—Ragi in the Belur and Hole-Narsipur Taluks, sugar-cane in the Channarayapatna Taluk, and cholam, gingelly, black gram and green gram in the Arsikere Taluk, are being harvested.

10. Prospects of the season generally good. But rain is required for the withering crops in the Arsikere and Channarayapatna Taluks.

11. Except for plague in parts of the Hassan and Arsikere Taluks, public health generally good.

12. Cattle are generally in good condition. But "Dod Roga" is reported to exist still in parts of the Manjarabad and Belur Taluks. Water and fodder available, except in parts of the Arsikere and Channarayapatna Taluks, where date leaves are being used as fodder for cattle.

SHIMOGA.

8. Market well supplied.

9. *Agricultural operations.*—Paddy seedlings are being transplanted in the Nagar and Tirthahalli Taluks.

Standing crops, viz., paddy, ragi, cholum, avare, togari, gingelly, black gram, green gram, chillies and sugar-cane, are in good condition in all the taluks. Arecanut crop is attacked with "Kole Roga" (Rot) in portions of the malnad parts of the district.

Crops sown.—Ragi and horse-gram are being sown in portions of the Shimoga Taluk and the Kumsi Sub-Taluk.

10. Prospects of the season generally good. Food stuffs are available in sufficient quantities.

11. Public health generally good. But plague prevails in the towns of Shimoga and Channagiri and in the Kumsi Sub-Taluk.

12. Cattle generally healthy. But murrain prevails in the Honnali, Nagar and Tirthahalli Taluks. Water and fodder available.

KADUR.

8. Market well supplied.

9. *Agricultural operations.*—Transplanting of paddy in Chikmagalur, Koppa, Mudgere Yedahalli and Sringeri is going on.

Standing crops.—

In Chikmagalur—Paddy, sugar-cane, ragi, avare, gingelly, castor, cholum, coriander, black gram, green gram, togari, onions, garlic and coffee.
In Kadur—Paddy, ragi, cholum, avare, black gram, green gram, gingelly, castor, sugar-cane, savé, navane and horse-gram.
In Tarikere—Paddy, ragi, cholum, avare, togari, gingelly, sugar-cane, black gram and green gram.
In Koppa—Paddy, sugar-cane, cardamom, pepper and coffee.
In Mudgere—Paddy, ragi, sugar-cane, cardamom and coffee.
In Yedahalli—Paddy, sugar-cane and coffee.
In Sringeri—Paddy.

All the above are reported to be in good condition except in Kadur and in the maidan parts of the Chikmagalur Taluk where for want of rain, they have begun to wither. Areca crop in Koppa, Yedahalli and Sringeri is reported to be affected with "Kole Roga" (Rot).

Crops sown.—Horse-gram is being sown in Tarikere.

Crops harvested and their yield.—

Chikmagalur—Gid-ragi, garlic, onion and potato, yield 6 annas.
Kadur—Gingelly, yield 4 annas; and sugar-cane, yield 8 annas.

10. Prospects of the season fair in the malnad, but discouraging in the maidan parts of the district, where rain is urgently wanted to save the situation. Food stuffs are available in sufficient quantities but their prices are on the increase owing to want of rain.

11. Public health generally good.

12. Cattle generally healthy. But "Dod Roga" is still prevailing in parts of the district. Water and fodder are available, except in parts of the Chikmagalur and Kadur Taluks, where they are getting scanty.

CHITALDRUG.

8. Market well supplied.

9. *Standing crops.*—Such as, ragi, cholum, horse-gram, green gram, black gram, sajje, navane, togari, avare, paddy, sugar-cane, sesamum, chillies, savé, castor, and, etc., are reported to be generally in good condition except in parts of the Challakere, Hiriyur and Hosdurga Taluks, where crops are withering for want of rain. It is reported that catterpillars have attacked the young plants in some villages of the Molakalmuru Taluk.

Crops sown.—Ragi, paddy and chillies under the Marikanave channels in the Hiriyur Taluk.

Crops harvested and their yield.—

Gidda ragi under wells in the Challakere Taluk, yield 8 annas.

Sesamum in the Holalkere Taluk, yield 10 annas.

10. Prospects of the season fair. But more rain is needed for the standing crops generally in all the taluks and especially in the Hiriyur, Challakere and Molakalmuru Taluks. Food stuffs available.

11. Public health generally good.

12. Cattle healthy except in parts of the Holalkere and Hosdurga Taluks, where "Rinderpest" prevails. Water and fodder available, except in two hoblis of the Hosdurga Taluk where they are getting scarce. Owing to insufficiency of fodder in the Challakere Taluk, date leaves are being used to feed cattle.

BANGALORE,
9th September 1908.

A. RANGASWAMI IYENGAR,
Revenue Commissioner.

THE MYSORE DASARA INDUSTRIAL AND AGRICULTURAL EXHIBITION OF 1908.

GROUP IV—LIVE STOCK.

The following list of prizes proposed to be awarded during the Exhibition of 1908 is published for the information of intending exhibitors.

* Report not received.

DISTRICT REPORTS.

8. Markets how supplied.

9. Progress of agricultural operations, state of standing crops, prospects and probable outturn of harvests, serious damage done to crops by insects or other natural calamities.

10. Prospects of season, tracts in which the rainfall has been insufficient, areas affected by scarcity, number of people under relief, and state of food stocks.

11. Public health.

12. Remarks as to the condition of agricultural stock, failure of pasturage of fodder, etc.

BANGALORE CIVIL AND MILITARY STATION.

	Average for the past five years of the corresponding week.	*Current.*	
Prices of food grains—Rice ...	7¼	5¾ to 6	seers per rupee.
Ragi ...	19½	12 to 13	seers per rupee.

Agricultural operations.—Weeding in ragi fields.

State of standing crops.—Rain is wanted.

Cattle are in good condition. Water and fodder sufficient.

BANGALORE CITY AND TALUKS.

8. Market well supplied.

9. *Agricultural operations.*—Raiyats are still engaged in weeding operations in the Hoskote, Nelamangala and Magadi Taluks.

Standing crops, viz., paddy, sugar-cane, mulberry, ragi, haraka and castor are reported to be in good condition. It is reported that the recent rains have improved their condition to a considerable extent.

Crop sown.—Gram is being sown throughout the district.

Crop harvested.—Gingelly.

10. Stock of food grains sufficient, but their prices are reported to be as high as before.

11. Public health generally good. But a few cases of plague are reported to have occurred in certain villages of the district, excepting the taluks of Dodballapur, Channapatna and Closepet.

12. "Pod Roga" is reported to be gradually going down in the Kankanhalli and Magadi Taluks, and to have broken out in the Channapatna Taluk. In other parts of the district, cattle are healthy. Drinking water and fodder are reported to be available in sufficient quantities.

KOLAR.

8. Market well supplied.

9. *Standing crops.*—The recent rains have done some good to these in all the taluks of the district, except Chintamani and Chikballapur, where they are reported to be withering for want of them.

Crops sown.—Ragi in Bowringpet, Sidlaghatta, Malur and Srinivaspur; avare in Bowringpet and Malur; hutchellu in Sidlaghatta; savé in Sidlaghatta and Srinivaspur; baragu in Goribidnur; kulthi in Kolar, Bowringpet, Sidlaghatta, Chikballapur, Goribidnur, Malur, Srinivaspur and Gudibanda

Crops harvested and their outturn:—

Bowringpet—Ragi yield 12 annas.
Gudibanda— „ „ 16 „
Sidlaghatta—Cholum yield 8 annas.

10. Prospects of the season fair, but more rain is needed throughout the district. Food stuffs available, but their prices continue to be very high.

11. Except for plague in a few villages in the Malur and Sidlaghatta Taluks, small-pox in parts of Mulbagal and Gudibanda, and cholera in Mindahalli village, Mulbagal Taluk, public health generally good.

12. It is reported that cattle are suffering from "Rinderpest" in parts of Mulbagal, Sidlaghatta, Goribidnur and Gudibanda, and from Anthrax in parts of Srinivaspur. Water available. Water just sufficient.

TUMKUR.

8. Market well supplied.

9. *Standing crops* are reported to be in moderately good condition in the taluks of Tumkur and Koratagere. The recent showers have done some good to the dry crops in the district, except in Gubbi, where they are reported to be withering for want of rain.

Crops sown.—Horse-gram in Tumkur, Maddagiri, Chiknayakanhalli, Sira, Gubbi, Pavagada and Kunigal; and ragi, navane and togari in the Turvekere Sub-Taluk.

Crops harvested.—Sugar-cane in Tumkur, Gubbi, Kunigal and Turuvekere; cholum in Sira, Gubbi, Tiptur and Turuvekere; til in Gubbi and Tiptur; and paddy in Gubbi and Turuvekere.

10. Prospects of the season fair, but rains are needed throughout the district. Food stuffs are available in sufficient quantities, but their prices continue to be high.

11. Public health generally good.

12. Cattle generally healthy, except in certain villages of Tumkur, Maddagiri, Gubbi, and Tiptur, where they are suffering from "Dod Roga" and "Chappe Roga." Water and fodder are getting scanty. In Maddagiri water scarcity is being felt. Date leaves are being used as fodder in the taluks of Sira, Tiptur and Kunigal, and in the Sub-Taluk of Turuvekere.

MYSORE.

8. Market well supplied.

9. *Agricultural operations.*—Paddy in parts of the Nanjangud and Malvalli Taluks is being transplanted.

Standing crops are reported to be in moderately good condition in all the taluks.

Crops sown.—Horse-gram in parts of the Nanjangud, Malvalli, Mandya and Nagamangala Taluks; ragi in parts of the Mandya and Nagamangala Taluks; and savè in parts of the Mandya Taluk.

Crops harvested.—Ragi in parts of the Mysore and Heggaddevankote Taluks; cholum in parts of the Mysore and Gundlupet Taluks; and till in parts of the Heggaddevankote Taluk.

Probable outturn of crops.—Gundlupet cholum and til yield from 8 to 10 annas each.

10. Prospects of the season generally good. But rain is wanted, however, in parts of the Mysore, Hunsur, Gundlupet, Nanjangud, T.-Narsipur and Krishnarajpete Taluks. Food stuffs sufficient for the present, but their prices are rising.

11. Except for plague in a few places in the district, public health generally good.

12. Cattle are generally in good condition. But it is reported "that Dod Roga" exists in parts of the Mysore, Gundlupet and T.-Narsipur Taluks and that both "Sappe Roga" and "Batti Roga" exist in parts of the Yedatore Taluk. Water and fodder available, except in parts of the Nagamangala Taluk, where stock of fodder is reported to be diminishing.

HASSAN

8. Market well supplied.

9. *Agricultural operations.*—Paddy is being transplanted in the Manjarabad Taluk.

Standing crops.—Paddy and ragi in the Hassan and Manjarabad Taluks; paddy, ragi, togari, castor and gingelly in the Channarayapatna, Hole-Narsipur and Arkalgud Taluks; paddy and sugar-cane in the Belur Taluk and in the Alur Sub-Taluk; sugar-cane, gingelly, cholum, green gram, black gram, ragi and coriander in the Arsikere Taluk; these are reported to be in good condition.

Crops sown.—Kulthi in Arkalgud and Arsikere and in the Alur Sub-Taluk, and ragi in the Arsikere Taluk, are being sown

Crops harvested.—Ragi in the Hassan, Belur and Hole-Narsipur Taluks, and in the Alur Sub-Taluk and sugar-cane and cholum in the Channarayapatna Taluk, are being harvested.

10. Rain is required in almost all the Taluks of the district for the withering crops. Some rain has recently fallen in parts where most required.

11 Except for plague in parts of the Hassan, Belur, Channarayapatna and Arsikere Taluks, public health generally good.

12. Cattle are generally in good condition. "Dod Roga" is reported to exist still in parts of the Manjarabad, Arkalgud and Belur Taluks. Water and fodder available, except in parts of the Arsikere and Channarayapatna Taluks. It is reported that the stock of fodder available in *hittals* of raiyats will last from one to three months.

SHIMOGA.

8. Market well supplied.

9. *Standing crops, viz.*, paddy, ragi, cholum, avare, togari, gingelly, black gram, green gram, chillies and sugar-cane, are in good condition in all the taluks of the district. Arecanut is also in good condition. But in portions of the Nagar and Tirthahalli Taluks, it is attacked with "Kole Roga" (Rot).

Crops sown.—Horse gram is being sown in portions of the Shimoga and Honnali Taluks.

Crops harvested.—Navane, cotton and savé in the Honnali Taluk; green gram and coriander are being harvested in portions of the Honnali Taluk.

10. Prospects of the season fair. But more rain is wanted. Food stuffs available but their prices have risen high.

11. Public health generally good, but plague continues still in the towns of Shimoga and Channagiri and also in a few villages of the Shimoga Taluk.

12. Murrain prevails in portions of all the taluks, except Shimoga. A disease, resembling cholera, has broken out among cattle in Holehonnur, Shimoga Taluk. Water and fodder available.

KADUR.

8. Market well supplied.

9. *Agricultural operations.*—Transplanting of paddy in Chikmagalur, Koppa, Yedahalli and Sringeri, and of ragi in Mudgere.

Standing crops.—

In Chikmagalur—Paddy, sugar-cane, ragi, avare, gingelly, castor, cholum, coriander, black gram, green gram, togari, onion, garlic and coffee.
In Kadur—Paddy, ragi, cholum, avare, togari, sugar-cane, black gram, green gram, gingelly, castor, savé, navane and horse gram.
In Tarikere—Paddy, ragi, cholum, avare, togari, gingelly, sugar-cane, black gram and green gram.
In Koppa—Paddy, sugar-cane, cardamom, pepper, coffee and areca.
In Mudgere—Paddy, ragi, sugar-cane, cardamom and coffee.
In Yedahalli—Paddy, sugar-cane, areca and coffee.
In Sringeri—Paddy and areca.

All these are reported to be in good condition, except in Kadur where standing crops are reported to have been affected with insects, and the maidan parts of the Chikmagalur, Kadur and Tarikere Taluks, where, for want of rain, they have begun to wither. Areca crop in Koppa, Yedahalli and Sringeri is reported to be still affected with "Kole Roga" in a mild form.

Crops harvested and their yield.—

Chikmagalur—Gid-ragi, garlic, onion and potato, yield 6 annas.
Kadur—Gingelly, green gram and tadagani, yield 4 annas.

10. Prospects of the season fair in the malnad, but discouraging in the maidan parts of the district, where rain is urgently wanted to save the situation. Food stuffs are available in sufficient quantities, but their prices continue to be high owing to want of rain.

11. Public health generally good.

12. Cattle generally healthy. But "Dod Roga" is still prevailing in parts of the district. Water and fodder are available, except in the maidan parts of the district where they are becoming scanty.

CHITALDRUG.

8. Market well supplied.

9. *Standing crops,* such as, ragi, cholum, horse gram, togari, avare, sajje, navane, paddy, chillies, sesamum, savé, castor, sugar-cane, etc., are reported to be generally in good condition, except in parts of the district, where they are withering for want of rain. More rain is urgently needed for the standing crops generally.

Crops sown.—Nat ragi in the Challakere Taluk.

Crops harvested and their yield.—

Green gram in the Chitaldrug Taluk, yield 5 annas.
Nat ragi in the Challakere Taluk, yield from 4 to 6 annas.
Sesamum in the Holalkere Taluk, yield 10 annas.

10. Prospects of the season fair. But more rain is urgently needed for the standing crops generally and especially in parts of the Hiriyur, Challakere and Hosdurga Taluks.

11. Public health generally good.

12. Cattle healthy, except in parts of the Hiriyur, Holalkere and Hosdurga Taluks, where "Rinderpest" prevails. Water and fodder available, except in parts of the Hosdurga Taluk; where they are getting scarce.

No. R. 1725—Agri. 26-08-4, dated 11th September 1908.

The accompanying statement showing the Railborne trade (Exports and Imports) of the Mysore State in certain selected articles for the half-year ending 31st March 1908 is published for general information :—

Statement showing the Railborne trade (Exports and Imports) of the Mysore State in certain selected articles for the half-year ending 31st March 1908.

No.	Name of articles	Quantity exported from Mysore in maunds of 82⅔ lbs.	Quantity imported into Mysore in maunds of 82⅔ lbs	Remarks as to Exports	Remarks as to Imports
1	Food grain—				
	Paddy ...	3,33,485	2,638	Exported chiefly to the Madras Presidency and in less quantity to the Bombay Presidency.	Imported chiefly from the Madras Presidency.
	Rice ...	9,843	2,31,161	Exported chiefly to the Madras and Bombay Presidencies.	Imported chiefly from the Madras Presidency.
	Ragi ...	2,15,254	838	Exported to the Madras Presidency only.	Imported from the Madras Presidency only.
2	Cotton ...	48,058	9,253	Exported chiefly to the Bombay Presidency and in less quantity to the Madras Presidency.	Imported chiefly from the Bombay Presidency and in less quantity from the Madras Presidency.
3	Wool	318	1,870	Exported chiefly to the Bombay Presidency and in less quantity to the Madras Presidency.	Imported almost wholly from the Madras Presidency.
4	Cotton and woollen goods.	12,783	73,917	Exported chiefly to the Madras Presidency.	Imported chiefly from the Madras Presidency and in less quantity from the Bombay Presidency.
5	Sugar	10,281	58,186	Exported chiefly to the Madras Presidency.	Imported largely from the Bombay Presidency and in less quantity from the Madras Presidency.
6	Jaggery... ...	1,31,578	39,204	Exported largely to the Bombay Presidency and in less quantities to Central Provinces and Berar and Madras Presidency.	Imported almost wholly from the Madras Presidency.
7	Wheat	1,151	48,031	Exported chiefly to the Madras Presidency.	Imported almost wholly from the Bombay Presidency.
8	Oil seeds	2,93,493	24,782	Exported chiefly to the Madras and Bombay Presidencies.	Imported from the Madras and Bombay Presidencies only.
9	Salt	96	3,10,114	.....	Imported largely from the Bombay Presidency and in less quantity from the Madras Presidency.
10	Tobacco... ...	6,497	28,066	Exported chiefly to the Madras Presidency.	Imported almost wholly from the Madras Presidency.
11	Timber—				
	Wrought ...	6,095	8,946	Exported chiefly to the Madras Presidency and in less quantity to the Bombay Presidency.	Imported almost wholly from the Madras Presidency.
	Unwrought ...	1,08,038	5,61,522	Exported to the Madras and Bombay Presidencies only.	Imported almost wholly from the Madras Presidency.
12	Kerosine oil ...	399	1,26,181	Exported almost wholly to the Madras Presidency.	Imported from the Madras and Bombay Presidencies only.
13	Metals—				
	Wrought ...	12,511	2,07,214	Exported largely to the Madras Presidency and in less quantity to the Bombay Presidency.	Imported chiefly from the Madras and Bombay Presidencies.
	Unwrought ...	3,874	10,914	Exported almost wholly to the Madras Presidency.	Imported chiefly from the Madras and Bombay Presidencies.
14	Cattle—numbers ...	428	162	Exported almost wholly to the Madras Presidency.	Imported chiefly from the Madras Presidency and in less numbers from the Bombay Presidency and the Punjab.
15	Horses—numbers ..	184	213	Exported almost wholly to the Madras Presidency.	Imported chiefly from the Madras and Bombay Presidencies and in less numbers from Calcutta and the Punjab.

By Order,
K. S. CHANDRASEKHARA AIYAR,
Secy. to Govt., Gen. & Rev Depts.

Proceedings of the Government of His Highness the Maharaja of Mysore.

READ—

Letter No. 13176, dated the 27th May 1908, from the Revenue Commissioner in Mysore, seeking instructions of Government on certain points which have arisen in appeal case No. 79 of 1907-08, on the file of his Court.

No. R. 1280-91/2—R. M. 310-07-2, DATED BANGALORE, 25TH AUGUST 1908.

ORDER THEREON.—A jungle-stream taking its rise in some hills above the village of Sunkal-Hosur in the Hole-Narsipur Taluk and passing through dry land Survey No. 5 of that village, belonging to one Venkoba Rao, was dammed up by him in 1904-05 within the limits of the said survey number, in order to irrigate it. Thereupon, the Jamabandi Officer (Mr. B. Ramaswamaiya) directed that a water-rate of Rs. 20-11-6 should be levied from Venkoba Rao. The latter appealed against this order to the Deputy Commissioner, stating that he was not liable to pay any water-rate under para III of the Survey Guarantee, as he had merely utilized the water of a stream flowing through his land. The Deputy Commissioner, however, rejected the appeal. On second appeal, the Revenue Commissioner has forwarded the case for the orders of Government, as he feels some doubt whether, in accordance with the principles laid down in Government Proceedings No. 11033—641, dated the 17th December 1890, and No. 3542—51, dated the 15th March 1903, and para III of the Survey Guarantee, the appellant would not be entitled to exemption from payment of water-rate; and is of opinion that, if such a right on behalf of land-holders to irrigate their lands by damming up jungle-streams within their own lands is recognized, it would be necessary to subject it to some restrictions, in order to safe-guard the rights of Government to utilize, when occasion arises, the water-supply which may be derived therefrom.

The orders referred to by the Revenue Commissioner are not, as observed by him, exactly applicable to the present case. The order of 1890 refers to a case in which the water was derived from springs arising in the land itself; and Government Proceedings No. 3542-51, dated the 5th March 1903, merely lays down that an occupant, who constructs dams across, or draws water direct from, a stream, not within the boundary of his occupancy, is liable to water-rate, and does not decide what are the rights of a land-holder to use the water of streams passing through his holding. The stream from which the water is drawn is stated to be a small affluent of the Hemavati. The right to its water vests therefore in Government, under Section 36 of the Land Revenue Regulation; and Government may levy a water-rate for its use under Section 53. Para III of the Survey Guarantee of 1870 is merely intended to encourage land-holders to create new sources of irrigation for their own lands, and does not confer any power on them to use water flowing in defined streams through their lands, so as to affect the supply to any Government work of irrigation. In the case under reference, no water-rate need be levied, as the dam has been constructed within the land itself, and there are no Government works of irrigation below it, dependent on the water of the stream in question. Government, however, consider that no person should be allowed to utilize water flowing in streams passing through private holdings without obtaining previous permission; and such permission, when granted, should be subject to the express condition that the use of water may be prohibited and any private work of irrigation, which may have been constructed, may be required to be removed, if such a course is found necessary, in order to construct any new Government work of irrigation, or for the purpose of securing an adequate supply of water for any such existing work, or for improving it.

K. S. CHANDRASEKHARA AIYAR,
Secy. to Govt., Gen. & Rev. Depts.

No. R. 1742—*Agri.* 145-06-7, *dated* 12*th September* 1908.

The following letter No. 770, dated 8th February 1907, together with its enclosures from Dr. Lehmann, Agricultural Chemist to the Government of Mysore, are herewith published for general information as they contain useful matters regarding the prospects of development of sugar industry in the State.

By Order,

K. S. CHANDRASEKHARA AIYAR,
Secy. to Govt., Gen. & Rev. Depts.

In response to Government Order No. R. 8644—Agri. 285-03-9, of 15th March 1905, I have the honour to report on the results of some of my experiments in regard to the manufacture of sugar.

2. Most of these results have already been reported on from time to time in my annual reports, and the desirability of using more modern methods for utilising the juice of the sugar-cane than those involved in making jaggory have been referred to by me on several occasions. Appended I am giving extracts from the marginally noted reports giving some of the reasons why it appears highly desirable to me that more modern machinery should be introduced into Mysore for manufacturing sugar. The substance of these extracts is in short that the imports of refined sugar are very large and rapidly increasing. In 1903-04 the imports were over 290,000 tons, an increase compared with 10 years before of 173 per cent. This rapidly growing increase can only be checked by India producing a sugar of equally good quality herself, and to do this improved machinery is absolutely necessary. The imports in 1903-04, amount to about two pounds of sugar per head of population. The increase in importations must imply a reduction in the jaggory produced in India unless the consumption of sugar per head is also increased. The present system of boiling jaggory and afterwards refining this is a *very wasteful* process. The better the machinery used, the less the loss will be. India has many natural advantages for producing sugar, and if these opportunities are made use of, could export sugar very largely instead of importing it.

(*a*) Special Report accompanying my letter No. 56, dated 23rd July 1901.

(*b*) Second Annual Report, page 6.

(*c*) Fifth Annual Report, pages 9 and 10.

(*d*) Sixth Annual Report, page 21, para 42.

3. India as a whole and Mysore in particular can grow sugar-cane of the very best quality—(21 per cent of sugar less than $\frac{1}{2}$ per cent glucose). I know of no other sugar-cane to equal our best. The outturn per acre can be materially increased with proper cultivation. Labour is cheap. The chief drawback to the industry flourishing and sugar being exported instead of imported is the lack of anything approaching modern machinery in its manufacture. The larger and more modern the machinery used the more completely would be overcome the immense losses now sustained by jaggory boiling and the conversion of that into refined sugar. The ordinary country mill when used to its best advantage leaves as a rule over 26 per cent of the total sugar in the refuse. Over a quarter of the sugar grown is therefore lost by imperfect milling when the ordinary bullock mill is used. A mill of this sort will crush between one hundred weight and two hundred weights per hour, and as a rule three pairs and some times six pairs of bullocks are used for each mill one working while all the other pairs are resting.

4. With a somewhat larger and better made mill driven by an engine the loss of sugar is reduced from 26 per cent to about 18 per cent, and a six-horsepower engine running it will enable it to crush about 1 ton of cane per hour. The expense of running such a mill with an oil engine will be about five rupees per day and as it will do 10 to 20 times as much work as an ordinary cattle mill, these five rupees will pay when used in this way for the work done by about 60 pairs of bullocks and about forty coolies per day when using the ordinary country mill. In other words, the crushing of the cane with the larger mill will cost about *one-eighth* or *one-tenth* of what it would cost with the country mill besides saving at the rate of about 40 maunds of jaggory or about 50 Rs. per acre on the extra weight of sugar extracted from the cane.

5. With still larger mills the saving is still greater and with the largest mill I know of all but 7 per cent or 8 per cent of the sugar in the cane are expressed. But these very large mills require such a large area of sugar-cane to keep them working, that for the present they could only be employed to the best advantage in two or three places in Mysore. But somewhat smaller mills would be of immense benefit and could be generally used. What has been said about mills applies to a greater or less degree to all the other appliances found in a sugar house.

6. As pointed out in my second annual report, the loss from decomposition of sugar when boiling down the juice of sugar-cane is very great in Mysore, in some instances amounting to over 20 per cent. This is due to boiling down the juice in an open pan over a "direct" fire and to improper liming. Fermentation is also a great source of loss of sugar. With [illegible] methods and modern machinery this loss can be almost

with which it is mixed. But in order to make a good quality of sugar and get as large a quantity of it as possible from a given weight of cane, a number of other processes are necessary. The juice has to be properly limed, the impurities thrown down by the lime have to be separated out, the scum formed on the surface of the juice when boiled up has to be removed and passed through a filter press, any excess of lime if added has to be removed and the juice has to be boiled down as quickly as possible and at the same time at as low a temperature as possible to the point at which the bulk of the sugar crystallises out so as to prevent decomposition. To remove all these impurities reduces of course the gross weight of the sugar produced. The molasses can however sometimes be used for other purposes. But even considering the molasses to be of no value it is much more profitable to remove these impurities than to let them remain in the finished products. Jaggory sells on an average at about one anna a pound. The average value per pound of the imported sugar as given by the "Customs Returns" is very nearly 1½ annas per pound, and the retail price of that sugar is very nearly two annas a pound. Out of the juice which would give 100 lbs. of jaggory of good quality I have made from 80 to 87 lbs. of centrifugalled sugar. And, notwithstanding that with the present appliances, I have not been able to remove all the impurities separated by the lime and that the sugar was therefore darker in colour and not quite as pure as it would otherwise have been, I sold it for 1½ annas to 2 annas a pound and some of it was over 98 per cent pure. This would imply that when making sugar instead of jaggory the total return would be from 25 per cent to 50 per cent more than when making jaggory; and as the profit begins after all the expenses have been deducted, and it is not much more expensive to make centrifugalled sugar than jaggory, the profits must be *immensely* greater when making the centrifugalled sugar. I might add that since writing my report for 1904-05 the imports of refined sugar for that year and the last one have been published. During 1905-06 the total imports of refined sugar into India were 368,355 tons valued at Rs. 7,22,25,947, an increase of 28·39 per cent in value and 26·39 per cent in weight in these two years. If the people in Mysore have used imported sugar at the same rate as the other people in India have done this would indicate that last year the sugar imported into Mysore was 6,932 *tons* or a little over 2·8 lbs. per head, costing Rs. 13,59,393. Based on the same calculations the imports into Mysore were in 1894-95 less than 2,169 tons and Rs. 2,33,764. This is equivalent to an increase of 481½ per cent in value in 11 years and nearly 9 per cent in value and 14½ per cent in quantity in the last year. With proper machinery it would be easily possible not only to keep all this money sent to foreign countries for sugar in Mysore but to export sugar in considerable quantities at a handsome profit. Besides improving the manufacture of sugar, the introduction of comparatively modern machinery would also improve the jaggory manufactured in the country for such time as jaggory would be continued to be manufactured.

8. To boil the juice of sugar-cane into jaggory and to refine that afterwards is a very wasteful method of making refined sugar. Because in the first case by so doing, a large portion of the water evaporated when boiling down the juice to jaggory has to be added again afterwards to make it possible to remove the impurities contained in the jaggory and afterwards this water has to be again evaporated. The fuel used in that operation is therefore practically wasted; for these impurities could be removed before boiling down the juice to jaggory. And to remove these impurities after the juice has been boiled down to jaggory also implies a comparatively heavy and unnecessary expenditure in bone char. Besides these and a few other losses which are necessarily connected with the refining of jaggory the method as employed as at present includes all those losses which apply to jaggory making as such.

9. Considering all this it is surprising that the refining of jaggory has ever paid. And the fact that refineries can exist and use more or less sugar-cane jaggory for refining purposes proves more conclusively than any estimates which could be prepared that it must pay handsomely to produce so-called refined sugar directly from the cane, provided sufficient sugar-cane can be grown within a reasonable distance of a sugar factory to keep it in work for two or three months in the year. *The larger such a factory is, other things being equal, the more* economically it can work. But unfortunately at present neither the area of sugar-cane cultivated by any one man in any spot in Mysore, nor the capital at the disposal of the average cultivators will permit of the erection of a *large* modern sugar house. But *small* sugar houses dealing with from 40 acres to 200 acres of cane or even more could be established to great advantage in many parts of Mysore if those who have the necessary capital could increase the area cultivated or the less wealthy would form a company.

10. At present there are however very few cultivators who are able to grow more than 10 acres or 15 acres of sugar-cane. One of the chief reasons for this is that they are unable to mill and boil more cane than can be grown on that area with the appliances at present at their disposal. It is practically impossible to mill more than one acre of good sugar-cane with a single cattle mill as ordinarily used in one month's time, and as most of the varieties of sugar-cane deteriorate materially when allowed to remain growing for more than a month or six weeks after they have reached their maximum sugar contents it would take six or seven of the ordinary bullock mills to crush the cane which could be grown on 10 acres of good land in the time during which the cane remains at its best, and that number of mills is about the maximum for which even comparatively wealthy land-owners can supply the necessary bullocks.

11. With the machinery in use at present the area of sugar-cane grown by any one proprietor is therefore practically limited to about 10 or 15 acres. With even a very small sugar house based on only moderately modern methods the smallest area which would suffice to keep

that sugar house working *to advantage* for say two months in the year would be about 40 or 50 acres. It would therefore require the co-operation of several cultivators of sugar-cane to supply the demands of such a sugar house unless the cultivators are so confident of the success of a modern sugar house that they are prepared on the strength of that confidence to suddenly and very materially increase the area under sugar-cane and it is hardly to be expected that such confidence can be established in the minds of the cultivators by any Department of Agriculture if they are not in a position to show the machinery at work and prove by ocular demonstration that what they claim can in reality be done.

12. I think I have given sufficient figures to show that the people of India want a very large quantity of so-called refined sugar and that this demand is growing enormously. That the present system of boiling jaggory with the appliances at the disposal of the raiyats is very wasteful and that furthermore the practice of refining jaggory is wasteful in itself and that such methods are not likely to stem the tide of imported sugar in the future any more than it has done in the past.

13. I think I have also given sufficient evidence that the manufacture of sugar directly from the cane must be profitable and highly profitable.

14. The machinery in a modern sugar house is no doubt expensive. But the total cost of the mill is returned in a year by the extra amount of sugar it extracts from the cane and the engine will be repaid in two or utmost three years by the reduction in the expense of milling the cane. Just how long it will take to repay the other machinery by the increased profits I cannot state definitely at present. But probably it will be paid for as quickly as the mill and engines. This applies of course to machinery run intelligently for about two months a year continuously.

15. I hope I have pointed out sufficiently the improvements which can be brought about by more up-to-date machinery and methods in the Mysore sugar-cane industry to make it appear highly desirable to give the raiyats a chance of seeing such machinery at work, and learning for themselves what can be done with it. It is partly for that reason I should like to have a complete sugar house on the Experimental Farm at Hebbal. But another and equally weighty reason is that I should like to have a chance of experimenting further on the methods of sugar making and testing what methods would probably give best results in Mysore. For as in Mysore the conditions are not the same as in other sugar-producing countries we must make our own experiments in the manufacture of sugar as well as in other things.

16. But there is third reason as important as either of the other two which makes it desirable to have a sugar house capable of treating a much larger quantity of sugar-cane in a month or so than we shall ever be able to grow on the experimental farm, and that is, that in order to be able to conduct plot experiments with sugar-cane all the plots in one set of experiments must be practically cut at the same time, and in order to be able to do this it is necessary to have a very much larger sugar house than would be necessary for ordinary purposes.

17. I have 15 estimates for various sized sugar houses specially prepared for me by various manufacturers. They vary from Rs. 16,000 to Rs. 1,29,000 in price and in capacity from 1 ton of sugar a day to 4 tons per day. But the kind of machinery in them varies even more than the price and capacity; some of them are almost miniature modern sugar houses. Others small sugar houses as they were met with fifty years or more ago. None of them has however a nine-roller mill, such as I think we ought to have for our experimental work.

In the Experiment Station at New Orleans, in which I was Chemist 15 years or so ago, we had about 20 acres of land and on it a sugar house which would probably cost now Rs. 1,00,000. But in it were a diffusion plant as well as a nine-roller mill and a number of other machines were present in duplicate.

The sugar house which, it would, in my opinion, be highly desirable to have on the farm, would cost probably about Rs. 40,000 or Rs. 50,000. This would also provide for a number of machines being in duplicate for experimental purposes. But as such a sugar house can be equipped in stages and as I know there is a very heavy demand on the State Funds, I request that Rs. 20,000 be included in my next year's budget to enable me to get the most important machinery, and that the other machinery be added as circumstances permit. Should Government desire me to give the experiments on which the estimates of the losses sustained by the present method of jaggory boiling have been based in greater detail I shall of course be delighted to do so.

ENCLOSURES TO THE ABOVE.

(1) *A note on the Mysore Sugar Industry.*

When appointed to my present position one of the duties imposed on me was to try to revive decaying industries in Mysore. In trying to fulfil this part of my duty I have given special attention to the sugar industry. I did so because on the one hand through the assistance of Government the silk industry was already being investigated by specialists, the representatives of Mr. Tata, and because on the other hand the sugar industry is one of those industries of Mysore in which I have had much practical experience before coming here.

No doubt many would resent the idea that the sugar industry is in the process of decay, as it has been carried on in much the same way as at present for the past six hundred years or more; that, in fact, it has been improved upon, because for one thing quite recently iron mills have taken the place of the old wooden mills and much better extraction of the juice is being obtained. But when viewed in the light of the progress made in other countries, and when the relative position of India as a sugar producing country six hundred years ago and its present position are compared there can be no doubt that the sugar industry is one of those decaying industries which it is in the interests of the State to revive. In fact the native refining industry is already practically dead, so far as I could ascertain, in Mysore. So-called refiners are still engaged in the bazaars and sell so-called native refined sugar. This is, however, nothing but sugar refined in the large factories, imported into the State and remelted in the bazaars to give this sugar the appearance of native-refined sugar; and to overcome the objection existing to sugar refined with charcoal, the so-called native refined sugar is therefore sold under false pretensions.

The fate which has overtaken the native refining industry is sure to overtake the jaggory boiling industry sooner or later. In fact the sooner the jaggory boiling is abolished the sooner the sugar industry will regain some of its former splendour. Of course the methods of cultivating the cane will also have to be improved. But of this I shall speak on some other occasion. At present I shall only attempt to prove that jaggory boiling is one of the prime factors retarding the sugar industry, and make some suggestions for the removal of this barrier.

In jaggory boiling as at present carried on in the Kunigal, Krishnarajpete and Seringapatam Taluks there is a loss varying from 10 per cent to 22 per cent of the weight of the jaggory in refinable sugar. In other words, the same quantity of sugar-cane which produced 100 lbs. of jaggory from which 50 to 62 lbs. of refined sugar could be obtained could give, if manufactured directly into refined sugar by improved machinery, about 70 to 75 lbs. of refined sugar. That such a loss may make all the difference between a flourishing industry and a crippled one is self evident. But to this loss must be added the expense of the fuel used for boiling the jaggory and many other items; for the fuel used to make the jaggory is largely wasted if the jaggory has to be remelted and refined and the cheap fuel used for this purpose such as the begasse (the expressed cane stalk) and jungle wood has to be replaced by the more expensive fuel used in the refineries. There are many other drawbacks and losses in jaggory boiling. But these cannot be taken into account here especially as they are to some extent at least offset by drawbacks in whatever other system might be introduced. But the loss of on an average 15 lbs. on every 75 lbs. of refinable sugar is so serious that, I think, it justifies almost any effort made to save it. This loss may be partially overcome by improving the present system of jaggory boiling. To what extent I cannot say definitely. But as soon as I am in a position to do so I shall make experiments in the laboratory, to save as much of this loss as possible by making various improvements to meet the different circumstances of the present sugar producers. But so long as jaggory boiling is continued this loss must go on to a very large extent as has been proven by all the leading sugar producing countries having abandoned long ago all systems which were in any way similar to that in vogue here.

Six hundred years ago India was the leading sugar exporting country, and sugar was known in England as Indian salt. Now instead of exporting India imports thousands of tons of sugar every year largely from Germany. This is not because Germany is naturally in a better position to produce sugar, but because it has been devoting perseverance, skill and capital to this industry. Naturally Germany possesses no advantages in producing sugar over Mysore. In Germany sugar is made from beets instead of cane. The percentage of sugar in the juice of beets is, if anything, slightly inferior to that from cane. To extract the juice from the beets is more complicated than extracting it from cane. To make sugar from beet juice is much more difficult than making it from cane juice, because, the beet juice has many more impurities than cane juice and as these impurities have a very disagreeable taste they must be entirely removed before the sugar can be used even for culinary purposes while the impurities of sugar-cane juice are not unpalatable and absolute purity of the sugar produced from it is therefore in many cases not necessary. In addition to this the yield of sugar beets is very considerably less per acre than cane and the cultivation required decidedly more than that necessary for sugar-cane. On no point does the sugar beet possess advantages superior to cane and in most respects it is decidedly inferior to the sugar-cane. In addition to this the wages paid the ordinary working man in Germany is much higher than that paid the coolies in India, labourers there receiving about Re. 1 per day. What then is the reason that the Germans can pay the freight on their sugar to India and still compete successfully with the Indian sugars in their own market. It is simply that they manufacture it on the large scale, use the most approved machinery which they have invented themselves; study to avoid every loss of time and material and have skilled men in charge of every operation. If we successfully learn the lessons they are teaching us and act upon them there is no reason why India should not export sugar to Germany if no tariff restrictions prevent it.

In Louisiana frost almost invariably kills the sugar-cane prematurely or rather necessitates its being cut prematurely, and as a result the juice contains more impurities and less sugar than here, and the price of labour (no better than that given by the coolies here) is from Rs. 2 to Rs. 3 per day. Even under such disadvantages the large factories would be able to compete with the German sugar if unprotected by either bounty or sugar duty. Cuba, the dreaded

rival of the German sugar manufactures, was hampered with heavy excise taxes paid to the Spanish Government and by inferior cultivation of the cane. For the present the late war has ruined its finances. Jamaica has, I am told, the same primitive methods it had fifty years ago, and is no longer a sugar-producing country of note. Demarara labours under the expensive system of having to pump out surplus water from its fields, some of which are below the level of the sea and keeping up an expensive system of dams. Mysore has undoubtedly a disadvantage in having a comparatively long dry season necessitating irrigation. But this disadvantage is comparatively insignificant when viewed with those mentioned above, and Mysore should therefore be in a position to compete with any of these countries, especially so in the markets of India.

There is no doubt then that Mysore can take a leading part in the sugar industry if it can follow the methods practised in those countries leading in this industry at present. But, as I said before, in none of them is any system of sugar boiling practised which resembles our own. It is of prime importance that marketable sugar be produced directly from the cane and that all the care possible be exercised to prevent loss of either material or time. To do this improved and expensive machinery is necessary, and, as in most manufacturing industries, the larger and more expensive the plant the more economically it can be made to work. Of course the scattered position of the sugar-cane fields in many parts of Mysore as well as the limited capital at the disposal of those who might be willing to form a company to build a modern sugar house will prevent for the present such large sugar houses being built as are frequently met with in other countries. But as it would not be difficult to find many places in which 100 acres or 200 acres or even double this number of acres of sugar-cane could be grown within a radius of four or five miles, sugar houses dealing with 100 or 200 acres of cane could be very profitably established. These would cost between Rs. 1,00,000 and Rs. 2,00,000, and ought to pay for themselves in a short term of years. Such sugar houses are something quite distinct from refineries. They turn out a fairly white sugar without the use of charcoal and are in many respects simpler than refineries. But as this process of manufacturing a good marketable sugar direct from the cane without the use of charcoal, is practically unknown in India, I request Government to kindly consider the possibility of putting up such a sugar house for demonstration purposes. I have no doubt that if properly located and worked there will be a considerable profit even in the pioneer plant, and have no fear that it could not be disposed of without loss. In fact one native gentleman, Mr. Sabapathaiya, has already promised me that if Government would put up such a sugar house on his estate near Bangalore he would guarantee to have 100 acres of sugar-cane within the radius of five miles or less to be worked up in such a sugar house and promised to take over the plant at the expiration of one or two years at its cost price. No doubt other gentlemen, either native or European, would be glad to avail themselves of such an opportunity. Mr. Young of Nyamati for one, is, I know, also anxious to avail himself of such an offer if he can find the necessary funds.

In conclusion permit me to repeat that if the sugar industry is to flourish, such factories must be established. The plan on which the capital to erect them is to be provided may differ. It may be that the raiyats themselves club together like the farmers in Canada have done to build cheese factories; that companies of raiyats and others be formed; that either outside companies or individuals build these central factories or sugar houses and buy the cane from the raiyats; or sugar planters be found who own the lands, cultivate them themselves and build their own sugar houses as in Louisiana. But while it is absolutely necessary to have these larger sugar houses if the industry is to flourish, there must invariably be some raiyats so situated that they cannot avail themselves of these advantages; and for these simpler plans will have to be worked out. So while most strongly urging Government to consider the possibility of building such a factory as referred to above, I shall by no means consider that that is all which is required to be done. Finally, permit me to state that the sooner such a work is taken in hand the better it will be. For one thing Cuba, formerly the largest cane-sugar-producing country, will be sure to revive from the temporary depression the war has created, before long, and as the heavy taxes imposed by Spain before the war have been removed, it will be producing more sugar than before the war.

---

(2) *Extract from page 6 of the Second Annual Report.*

Jaggory versus *Raw Sugar.*—So long as jaggory boiling is continued, it is, of course, necessary to make it as profitable as possible for the raiyats engaged in it. But the aim should be to replace this method of utilising the sugar-cane as soon as possible by a rational system of sugar making.

No doubt, there will remain in India a market for jaggory for generations to come. But this market will no doubt continue to grow smaller and smaller, while the market for the various forms of sugar will continually increase. If this be the case, it is evident that if India is to retain the position it holds at present, it must increase its supply of sugar at the expense of jaggory. To do this by refining jaggory is certainly a wasteful method; because—

(*a*) In jaggories numerous impurities are retained which could be easily removed if the juice were boiled into raw sugars, but are more difficult to remove later on.

(*b*) The better grades of raw sugar would be equal to the poorer grades of refined sugar in the market at present, (as a matter of fact, sugar can be made directly from the juice without bone char equal to the best grades of refined sugar. And such sugar is being made in America). The cost of refining such sugars will therefore be saved.

(*c*) It is easier and cheaper to refine such raw sugars as may require refining than to refine the average jaggories, and this saving will more than compensate for the extra expense in making the raw sugars.

In order to retain the present extent of cane cultivation, it is therefore better to boil the juice directly into sugar than into jaggory as done at present.

It is, however, a low ambition to simply retain the present position of the sugar industry, when India is importing sugar on such a large scale as it does. Deducting the exports from the imports for the past year, there remains a net import of sugar to the extent of over 130,000 tons. In other words, it would take a railway train covering over 35 miles of track, car touching car, to carry this sugar, or one train composed of 24 car-loads of sugar would have to run every day of the year to take away the sugar from the steamships as they come in.

This import takes place into a country which may be considered as the original home of the sugar industry; into a country which possesses, in some respects at least, great advantages for the production of sugar over the countries from which the sugar is imported. India ought certainly to be able to produce this sugar at home. But if it is necessary to partially abandon jaggory boiling in favour of raw sugars in order to simply retain that portion of our own sugar market, we possess at present, how much more important when we wish to regain a portion of our own markets we have lost For the sugar imported is of the better grades. We pay for it a little over Rs. 10 per hundredweight and for that we have exported we get considerably less than Rs. 6 per hundredweight.

A general opinion is that the raiyats of India are too poor to make any improvements in their methods. Still they can afford to lose considerably over 4 annas on every 16 annas' worth of jaggory they produce (which they might save without any extra outlay), and the people as a whole can afford to pay over 292 lacs of rupees to foreign countries for sugar which might be grown at home.

---

(3) *Extract from the Fifth Annual Report, (para 28).*

The aim of those interested in sugar-cane growing will have to be directed to the production of raw sugars instead of jaggory. Notwithstanding that the present methods of jaggory-making are capable of considerable improvement, the sugar industry must gradually decline if jaggory is made instead of raw sugars. In order to replace, or even to compete with the sugar at present imported in such large quantities into India, we must produce a sugar which can be easily refined. For refining purposes it is infinitely better to produce raw sugars than jaggory. And unless this is done, the sugar industry must decline with the gradually declining consumption of jaggory as such. This season it was only possible to produce one sample of raw centrifugalled sugar at the Laboratory. It contained 94·1 per cent of sucrose and 2·45 per cent of glucose. It is hoped that next season will give opportunities of doing more in this line of work.

---

(4) *Extract from the Sixth Annual Report, (para 42).*

A large and greatly increasing quantity of sugar is being imported to India every year. In 1893-94 this quantity was a little over 106,000 tons. Five years later the import had nearly doubled, being nearly 204,000 tons; and last year it was a little over 290,000 tons, which is an increase of over 42 per cent in these last five years. This import amounts to nearly 2 lbs. per head of population, and must represent a very considerable part of the total sugar consumption of India. These imports now come chiefly from Mauritius and Java, and less than 27,000 tons came last year from beet sugar-producing countries. That such a large and increasing import of sugar takes place, shows conclusively that there is something radically wrong with the Indian sugar industry. As far as Mysore is concerned, this "something" is certainly not to be found in the quality of the cane. For I know of no other country in the world in which sugar-cane is grown which contains 20 and 21 per cent of sucrose as it does in Mysore at times. The quantity of cane per acre should of course be improved. But probably there is no part of the industry which requires greater improvement than the manufacturing side. The milling of the cane, the liming, the removal of scum when boiling and the guarding against loss from fermentation of the juice are factors which require careful attention. But as the sugar imported is either refined or goes to the Indian refineries to be refined before being placed on the retail market, it is evident that in order to compete with this imported sugar we must treat our cane juice in such a way as to produce in the most economic way high grades of

1379

sugar. And we are unable to do this as long as we produce jaggory first, and send that to the factories to be refined. The fuel used to boil down the juice to jaggory is practically wasted, and the char filters and other parts of the refineries are given infinitely more work than need be if the molasses is not removed from the sugar before the latter is refined. Moreover the best grades of raw, centrifugalled sugar manufactured in the districts could be of a sufficiently high quality to be able to replace directly a part of the imported sugar. Jaggory would be unable to do this. As the universal experience is that refined sugars gradually replace the lower grades of sugars in the market, it is self-evident that as long as jaggory continues to be the chief product of the sugar-cane, the sugar industry is bound to decline unless a jaggory can be manufactured which is eminently suited for refining purposes. And as, for the reasons given above, this is not likely to be the case, it is necessary to replace jaggory boiling by more modern methods and to produce as good a quality of raw sugar as the circumstances will permit if the imported sugar is to be replaced in the Indian market by that produced in the country. India is the home of the sugar industry, and when sugar was first imported into Europe it was known by the name of "Indian salt." But the methods which were eminently successful 700 years, or even 150 years ago, cannot compete with modern appliances in an industry in which such advancement has been made as in sugar boiling. Sugar has dropped very much in price. When first imported in large quantities into Europe it was sold for a price considerably over Re. 1 per pound. In fact only about 100 years ago it was sold, for a short time, for well over Rs. 2 per pound on the continent of Europe; but this excessively high price was due to great restrictions having been placed on trade with sugar in continental Europe. The present comparatively very low price is in a great measure due to better and cheaper methods of production, and in order to compete, even in our own markets with countries employing these cheaper and better methods of productions, we must improve our own methods. If their methods are not applicable here we must make our own improvements; but improvements we must make if we want to keep a sugar industry.

DISTRICT REPORTS.

8. Markets how supplied.
9. Progress of agricultural operations, state of standing crops, prospects and probable outturn of harvests, serious damage done to crops by insects or other natural calamities.
10. Prospects of season, tracts in which the rainfall has been insufficient, areas affected by scarcity, number of people under relief, and state of food stocks.
11. Public health.
12. Remarks as to the condition of agricultural stock, failure of pasturage of fodder, etc.

BANGALORE CIVIL AND MILITARY STATION.

		Average for the past five years of the corresponding week.	*Current.*	
Prices of food grains—	Rice ...	7¼	5¾ to 6	seers per rupee.
	Ragi ...	19½	12 to 13	

Agricultural operations.—Weeding in ragi and paddy fields.

Cattle are in good condition. Water and fodder sufficient.

BANGALORE CITY AND TALUKS.

8. Market well supplied.

9. *Agricultural operation.*—Weeding process is still being continued in the Kankanhalli and Nelamangala Taluks.

Standing crops.—It is reported that the recent rains to some extent improved the condition of the ragi, sugar-cane, haraka and mulberry crops. Paddy crop is in urgent need of rain, as the water-supply from tanks has become insufficient. It is reported that a kind of insect locally known as the "Bajji Hula" has been causing damage to the castor crop in two villages of the Maralvadi Hobli, Kankanhalli Taluk.

Crop sown.—Horse gram throughout the district.

Crop harvested.—Potato in the Devanhalli Taluk.

10. Stock of food grains sufficient, but it is reported that their prices continue to be as high as before.

11. Except for plague prevailing in certain villages in all the taluks of the district, except Channapatna, Anekal and Devanhalli, public health generally good.

12. "Dod Roga" is gradually going down in the Kankanhalli and Magadi Taluks. It is reported that it has broken out in certain villages in the Channapatna Taluk. Drinking water and fodder are reported to be generally available in sufficient quantities, except in Magadi, where green leaves are also being used as fodder on account of the insufficiency of fodder.

KOLAR.

8. Market well supplied.

9. *Standing crops.*—The recent rains throughout the district have done some good to the standing crops.

Crops sown.—Ragi in Bowringpet; gingelly in Mulbagal and Bagepalli; paddy in Mulbagal; save in Bagepalli and Goribidnur; sajje in Bagepalli; haraka in Sidlaghatta; and horse gram throughout the district.

Crops harvested.—Gid ragi in parts of Bowringpet and Gudibanda; and cholum in Sidlaghatta.

Outturn of harvest:—

Bowringpet—Gid ragi, yield 12 annas.
Gudibanda— " " 16 "
Sidlaghatta—Cholum, yield 8 annas.

10. Prospects of the season fair, but more rain is needed throughout the district. Food stuffs available, but their prices continue to be very high.

11. Except for plague in a few villages in the Kolar, Malur and Sidlaghatta Taluks, small-pox in parts of Mulbagal and Gudibanda, and cholera in Mindahalli village, Mulbagal Taluk, public health generally good.

12. It is reported that "Rinderpest" is prevailing among cattle in parts of Mulbagal, Sidlaghatta, Bagepalli, Goribidnur and Gudibanda. Water and fodder available. Fodder is just sufficient.

TUMKUR.

8. Market well supplied.

9. *Standing crops* are reported to be withering for want of rain in all the taluks, except Sira and certain parts of Gubbi and Pavagada, where the recent showers have improved their condition.

Crops sown.—Horse-gram in Tumkur, Chiknayakanhalli, Sira, Gubbi, Tiptur, Pavagada and Koratagere; ragi in Gubbi, Tiptur and Pavagada; cholum in Turuvekere; and save in Tiptur.

Crops harvested.—Sugar-cane in Tumkur and Turuvekere; cholum in Sira, Gubbi, Tiptur, Koratagere and Turuvekere; til in Gubbi and nat ragi in Pavagada.

10. Prospects of the season fair, but more rain is needed throughout the district. Food stuffs are available in sufficient quantities, but their prices continue to be very high.

11. Public health generally good, except for cholera at Vallur, Pavagada Taluk.

12. Cattle generally healthy, except in certain parts of Tumkur, Maddagiri, Chiknayakanhalli, Sira, Gubbi and Tiptur, where they are suffering from "Dod Roga" and "Chappe Roga." Water and fodder are getting scanty. In Maddagiri water scarcity is being felt. Date leaves are being used as fodder in the taluks of Sira, Tiptur and Kunigal, and in the Sub-Taluk of Turuvekere. Arali leaves are also being used as fodder at Maddagiri.

MYSORE.

8. Market well supplied.

9. *Agricultural operations.*—Transplanting of paddy in parts of the Seringapatam and Malvalli Taluks.

Standing crops are reported to be in moderately good condition in all the taluks, except certain parts of the Chamrajnagar Taluk, where they are reported to be withering for want of rain. Ragi in parts of the Nanjangud Taluk is reported to be withering for want of rain.

Crops sown.—Horse-gram in parts of the Nanjangud and T.-Narsipur Taluks; and haraka and tadagani in parts of the T.-Narsipur Taluk.

Crops harvested.—Cholum in parts of the Yedatore and Gundlupet Taluks; ragi and til in parts of the Heggaddevankote Taluk; and kar paddy, til, gid ragi, savé and navane in parts of the Yedatore Taluk.

10. Prospects of the season generally good. But rain is wanted throughout the district. Food stuffs are sufficient for the present, but their prices are on the rise.

11. Except for plague in a few places in the district, public health generally good.

12. Cattle generally healthy. But "Dod Roga" in parts of the Mysore, Chamrajnagar, Gundlupet and T.-Narsipur Taluks and "Sappe Roga" in parts of the Yedatore Taluk, are still existing. Water and fodder available.

HASSAN.

8. Market well supplied.

9. *Agricultural operations.*—Paddy in the Manjarabad Taluk and ragi in the Arsikere Taluk and in the Alur Sub-Taluk, are being transplanted.

Standing crops.—Sugar-cane and paddy in the Belur Taluk and in the Alur Sub-Taluk; and paddy in the Arkalgud Taluk are reported to be in somowhat good condition. Paddy, ragi, togari, avare and kulthi are reported to be withering for want of rain in almost all the other parts of the district.

Crops sown.—Kulthi in the Channarayapatna Taluk and castor in the Arsikere Taluk are being sown.

Crops harvested.—Ragi in the Hassan, Arkalgud and Hole-Narsipur Taluks, and sugar-cane in the Channarayapatna Taluk are being harvested.

10. Early showers are required for the withering crops in almost all the parts of the district.

11. Except for plague in parts of the Hassan, Belur and Arsikere Taluks, public health generally good.

12. Cattle are generally in good condition. "Dod Roga" is reported to exist in parts of the Hassan, Manjarabad and Belur Taluks. Water and fodder are available, except in parts of the Arsikere and Channarayapatna Taluks. In the latter place, cattle are being fed on grass available in sugar-cane fields and on mugar-cholum stalks kept in stock by the raiyats. In the arid parts of the Arsikere and Channarayapatna Taluks, it was found on inspection that the raiyats had sufficient stock of dry fodder for their cattle.

SHIMOGA.

8. Market well supplied.

9. *Agricultural operations.*—Paddy seedlings are being transplanted.

Standing crops, viz., paddy, ragi, cholum, avare, togari, gingelly, black gram, green gram, chillies and sugar-cane, are in good condition in all the taluks, except the Shimoga, Channagiri and Honnali Taluks, where they have begun to fade for want of rain.

Crops harvested.—Arecanut is being gathered in portions of the Nagar and Tirthahalli Taluks.

10. Prospects of the season fair, but want of rain is generally felt throughout the district. Food grains are available, but their prices continue to be high.

11. Public health generally good. But plague is still prevailing in the town of Shimoga, in a few of its neighbouring villages and in the Channagiri town.

12. Murrain prevails among cattle in all the taluks, except Nagar. Water and fodder available.

KADUR.

8. Market well supplied.

9. *Agricultural operations.*—Transplanting of paddy in Chikmagalur, Koppa and Yedahalli, and of ragi in Mudgere.

Standing crops.—

In Chikmagalur—Paddy, ragi, avare, gingelly, togari, cholum, coriander, sugar-cane, green gram, black gram, castor, garlic and coffee.

In Kadur—Paddy, ragi, horse gram, cholum, sugar-cane, avare, togari, green gram, black gram, castor, savé, navane.

In Tarikere—Paddy, ragi, cholum, avare, togari, gingelly, sugar-cane, green gram and black gram.

In Koppa—Paddy, sugar-cane, areca, cardamom, pepper and coffee.

In Mudgere—Paddy, ragi, sugar-cane, coffee and cardamom.

In Yedahalli—Paddy, sugar-cane, areca and coffee.

In Sringeri—Paddy and areca.

All these are reported to be in fair condition in the district, except in its maidan parts, where, owing to want of rain, they are withering. It is reported that the crops in Kadur have been attacked by insects and that ragi and chillies in Tarikere by "Kondli Hula." Areca crop in Koppa, Yedahalli and Sringeri is still affected with "Kole Roga" in a mild form.

Crop sown.—Horse gram in Tarikere.

Crops harvested and their yield.—

Chikmagalur—Gid-ragi, garlic, green gram, potato, coriander and black gram, yield 6 annas.

Kadur—Sugar-cane, yield 8 annas; gingelly and cholum, yield 4 annas.

Tarikere—Gingelly on a small scale.

Mudgere—Cardamom, yield 8 annas.

10. Prospects fair in the malnad, but discouraging (causing anxiety) in the maidan parts of the district. Rain is urgently wanted throughout the district. Food stuffs are available but their prices continue to be high owing to want of rain.

11. Except for plague in a few villages in the Chikmagalur, Kadur and Tarikere Taluks, public health generally good.

12. Cattle generally healthy. But "Dod Roga" is still prevailing in parts of the district. Water and fodder are available, except in the maidan parts of the district where they are getting scanty.

CHITALDRUG.

8. Market well supplied.

9. *Standing crops,* such as, paddy, ragi, cholum, horse gram, avare, green gram, black gram, castor, navane, sajje, savé, cotton, etc., are reported to be generally in fair condition, except in certain parts of the district, where they are withering for want of rain.

Crops sown.—Nil.

Crops harvested and their yield.—

Green gram in the Chitaldrug and Holalkere Taluks, yield from 6 to 8 annas.

Cholum (in garden lands) in the Challakere Taluk, yield 2 annas.

Sosamum in the Holalkere Taluk, yield 8 annas.

10. Prospects of the season fair, except in the Challakere Taluk, where crops are withering for want of rain. More rain is urgently required for the standing crops generally and especially in parts of the Challakere, Hiriyur, Molakalmuru and Hosdurga Taluks. Food stuffs available.

11. Public health generally good.

12. Cattle healthy, except in parts of the Hiriyur, Holalkere and Hosdurga Taluks, where "Rinderpest" prevails. Water and fodder available, except in parts of the Hosdurga and Davangere, where they are getting scarce.
